2018 Rates Table Template v7.1	*All fields with an asterisk (*) are required. To validate press Validate button or Ctrl + Shift + I. To finalize, press Finalize button or Ctrl + Shift + F.*				
	If you are in a community rating state, select Family-Tier Rates under Rating Method and fill in all columns.				
	If you are not in a community rating state, select Age-Based Rates under Rating Method and provide an Individual Rate for every age band.				
	If Tobacco is Tobacco User/Non-Tobacco User, you must give a rate for Tobacco Use and Non-Tobacco Use.				
	To add a new sheet, press the Add Sheet button, or Ctrl + Shift + H. All plans must have the same dates on a sheet.

2018 Rates Table Template v7.1	*All fields with an asterisk (*) are required. To validate press Validate button or Ctrl + Shift + I. To finalize, press Finalize button or Ctrl + Shift + F.*			
	If you are in a community rating state, select Family-Tier Rates under Rating Method and fill in all columns.			
	If you are not in a community rating state, select Age-Based Rates under Rating Method and provide an Individual Rate for every age band.			
	If Tobacco is Tobacco User/Non-Tobacco User, you must give a rate for Tobacco Use and Non-Tobacco Use.			
	To add a new sheet, press the Add Sheet button, or Ctrl + Shift + H. All plans must have the same dates on a sheet.			
HIOS Issuer ID*	45127

2018 Rates Table Template v7.1	*All fields with an asterisk (*) are required. To validate press Validate button or Ctrl + Shift + I. To finalize, press Finalize button or Ctrl + Shift + F.*			
	If you are in a community rating state, select Family-Tier Rates under Rating Method and fill in all columns.			
	If you are not in a community rating state, select Age-Based Rates under Rating Method and provide an Individual Rate for every age band.			
	If Tobacco is Tobacco User/Non-Tobacco User, you must give a rate for Tobacco Use and Non-Tobacco Use.			
	To add a new sheet, press the Add Sheet button, or Ctrl + Shift + H. All plans must have the same dates on a sheet.			
HIOS Issuer ID*	45127			
Federal TIN*	45-5492167			
Rate Effective Date*	10/1/2018			
Rate Expiration Date*	12/31/2018			
Rating Method*	Age-Based Rates			

Plan ID*	**Rating Area ID***	**Tobacco***	**Age***	**Individual Rate***
Required: Enter the 14-character Plan ID	**Required:** Select the Rating Area ID	**Required:** Select if Tobacco use of subscriber is used to determine if a person is eligible for a rate from a plan	**Required:** Select the age of a subscriber eligible for the rate	**Required:** Enter the rate of an Individual Non-Tobacco or No Preference enrollee on a plan

Re: **Capital Advantage Assurance Company**
Small Group Rates
Filing No 17-37
TOI Code: H15G Group Health – Hospital/Surgical/Medical Expense
Sub-TOI Code: H15G.003 Small Group Only
Filing Type: Rate

Dear Ms. Fabian-Marks:

By this filing Capital BlueCross, on behalf of its wholly owned subsidiary Capital Advantage Assurance Company, submits to the Department Small Group Rates effective January 1, 2018.

The following is a summary of the rate filing:

- Company Name: Capital Advantage Assurance Company (CAAC)
- NAIC: 14411
- Market: Small Group
- On/Off Exchange: Off Exchange
- Effective Date: 1/1/2018
- Average Rate Change: 7.9%
- Range of Requested Rate Change: 6.9% to 11.7%
- Product: PPO and EPO
- Rating Areas: 6,7,9
- Metal Levels: Platinum, Gold, Silver, Bronze
- Current Covered Lives and Policyholders: 76,192/43,716
- Number of Plans: 32
- Contract Form #: C18-CAAC-SGP
- Form Filing SERFF #: CABC-131039475
- Binder SERFF #: CABC-PA18-125072238
- HIOS Issuer ID: 45127
- HIOS Submission Tracking Number: 45127-956004650371312672

Health care benefit programs issued or administered by Capital BlueCross and/or its subsidiaries, Capital Advantage Insurance Company®, Capital Advantage Assurance Company® and Keystone Health Plan® Central. Independent licensees of the BlueCross BlueShield Association. Communications issued by Capital BlueCross in its capacity as administrator of programs and provider relations for all companies.

On 7/20/17, I revised the filing to change the average increase from 5.1% to 7.9%. The proposed rates did not change. Instead, an error was found in the rate increase calculation. With this submission, the PA Rate Exhibits Table 10 2017 Calibrated Index rates are correctly inputted. Previous submissions used Q4 2017 instead of average 2017 calibrated index rates. Other CBC filings were reviewed and did not contain this same error. With this submission, all exhibits and memos reflecting the average rate change have been updated.

In support of this filing, I have included an Actuarial Memorandum with supporting exhibits, URRT, Consumer Friendly Justification, Rates Table Template, Rate Change Request Summary, and PA Plan Design Summary and Rate Tables.

If you have any questions regarding this filing, please call me at [redacted] (or via email at [redacted] or [redacted] Thank you for your assistance in this matter.

Sincerely,

[redacted]

[redacted], ASA, MAAA
Manager, Actuarial Services
Capital BlueCross

Capital Advantage Assurance Company (CAAC) – Small Group Plans

Rate request filing ID # CABC-131022141- This document is prepared by the insurance company submitting the rate filing as a consumer tool to help explain the rate filing. It is not intended to describe or include all factors or information considered in the review process. For more information, see the filing at http://www.insurance.pa.gov/Consumers/ACARelatedFilings/

Overview

Initial requested average rate change:	5.1%
Revised requested average rate change:	7.9%
Range of requested rate change:	6.9% to 11.7%
Effective date:	1/1/2018
People impacted:	76,192
Available in:	Rating Area 6, Rating Area 7, and Rating Area 9

Key information

Jan. 2016-Dec. 2016 financial experience

Premiums	$351,846,050
Claims	$296,590,006
Administrative expenses	$33,430,199
Taxes & fees	$6,828,630
Company made (after taxes)	**$14,997,216**

The company expects its annual medical costs to increase **9.1%**.

How it plans to spend your premium
This is how the insurance company plans to spend the premium it collects in 2018:

Claims:	83.4**%**
Administrative:	10.1**%**
Taxes & fees:	4.5%
Profit:	2.0**%**

Explanation of requested rate change

Primary drivers of requested change

- Historical claim experience
- Projected 2016 risk adjustment results
- Reimplementation of Health Insurer Fee in 2018

Changes being requested are also based upon consideration of the factors that influence future period cost structures. The primary drivers of change in future costs are:

- Anticipated increase in facility and physician unit costs
- Anticipated changes in prescription drug unit costs
- Continuing change in utilization such as
    - Intensity of medical services rendered
    - Changes in place of service (e.g. continued migration of inpatient stays to outpatient setting)
    - Further migration from brand prescription drugs to generic prescription drugs
    - Favorable impacts of value based benefits designs
- Prescription drug patent expirations and new to market brand drugs
- Leveraging associated with unchanged cost share components such as deductible and copays
- Inflation adjustment to administrative expenses

Capital BLUE

CAPITAL ADVANTAGE ASSURANCE COMPANY, INC.
RFJ Part II – Consumer Friendly Justification

Rate Increase Considerations: Changes being requested are based upon consideration of the factors that influence future period cost structures. The primary drivers of change in future costs are:

- Anticipated increase in facility and physician unit costs
- Anticipated changes in prescription drug unit costs
- Continuing change in utilization such as
  - Intensity of medical services rendered
  - Changes in place of service (e.g. continued migration of inpatient stays to outpatient setting)
  - Further migration from brand prescription drugs to generic prescription drugs
  - Favorable impacts of value based benefits designs
- Prescription drug patent expirations and new to market brand drugs
- Leveraging associated with unchanged cost share components such as deductible and copays
- Inflation adjustment to administrative expenses
- Reimplementation of the Health Insurer Fee in 2018

Health care benefit programs issued or administered by Capital BlueCross and/or its subsidiaries, Capital Advantage Insurance Company®, Capital Advantage Assurance Company® and Keystone Health Plan® Central. Independent licensees of the BlueCross BlueShield Association. Communications issued by Capital BlueCross in its capacity as administrator of programs and provider relations for all companies.

CAPITAL ADVANTAGE ASSURANCE COMPANY, INC.

ACTUARIAL MEMORANDUM
Small Group Rates
Effective January 1, 2018

General Information

Company Information

- Company Legal Name: Capital Advantage Assurance Company – CAAC
- State: PA
- HIOS Issuer ID: 45127
- Market: Small Group
- Effective Date: 1/1/2018

PID Company Information

- Company Name: Capital Advantage Assurance Company (CAAC)
- NAIC: 14411
- Market: Small Group
- On/Off Exchange: Off Exchange
- Effective Date: 1/1/2018
- Average Annual Rate Change: 7.9%
- Range of Requested Rate Change: 6.9% to 11.7%
- Product: PPO and EPO
- Rating Areas: 6,7,9
- Metal Levels: Platinum, Gold, Silver, Bronze
- Current Covered Lives and Policyholders: 76,192/43,716
- Number of Plans: 32
- Contract Form #: C18-CAAC-SGP
- Form Filing SERFF #: CABC-131039475
- Binder SERFF #: CABC-PA18-125072238
- HIOS Issuer ID: 45127
- HIOS Submission Tracking Number: 45127-956004650371312672

Company Contact Information

- Primary Contact Name: [redacted]
- Primary Contact Telephone Number: [redacted]
- Primary Contact Email Address: [redacted]

Scope and Purpose

By this filing, Capital Advantage Assurance Company (CAAC), a subsidiary of Capital BlueCross (CBC), submits rates for products to be made available to all small groups effective January 1, 2018. CAAC will only offer small group products off the federally-facilitated exchange.

Rate History and Proposed Variations in Rate Changes

Small Group	CAAC	1/1/2014	CABC- 12903497	0.00%
Small Group	CAAC	1/1/2015	CABC-129635598	5.39%
Small Group	CAAC	1/1/2016	CABC-130076031	-2.40%
Small Group	CAAC	1/1/2017	CABC-130539601	3.40%

Proposed Rate Increases

CAAC is proposing an aggregate annual increase of 7.9%. The rate change does vary by plan. The rate change is calculated in PA Rate Template Part III, Table 10, cell AC15.

Membership

Membership is shown in PA Rate Template Part I, Table 1.

Benefit Changes 2017-2018

There are several benefit changes being implemented in 2018. All benefit changes comply with the uniform modification of coverage standards described in 45 CFR 147.106(e). Any plan with a benefit change that did not meet the uniform modification of coverage standard was terminated, and a new plan was created in its place. All terminated plans are listed in Exhibit R, and a summary of proposed 2018 benefits is included in Exhibit A.

Benefit changes by plan are listed in Exhibit A1, highlighted in yellow.

Experience Period Premium and Claims

Base Experience Period: The base experience period (BEP) includes completed fee-for-service paid and incurred claims for dates of service between January 1, 2016 and December 31, 2016.

Paid Through Date: Claims in the BEP are paid through February 28, 2017

Premiums (net of MLR Rebate) in Experience Period: Premiums are calculated on an earned basis in the BEP. MLR rebate adjustments are equal to zero as CAAC does not expect to refund any MLR rebates.

Allowed and Incurred Claims during the Experience Period:

	Incurred	Allowed
Amount of claims processed through the issuer's claim system:	$289,082,408	$345,008,301
Amount of claims processed outside of the issuer's claim system:	$0	$0
Amount of claims that represent best estimate of incurred but not paid:	$7,507,598	$9,747,031

Allowed claims are developed by combining paid claims with member cost-sharing.

Estimated Incurred but Not Paid Claims: Paid claims by date of service come directly from CBC's data warehouse. The method for calculating incurred claims in the BEP is as follows:

1. Historical fee-for-service claims are viewed by date of service and date of payment in a claims triangle.
2. The claims triangle payments are then accumulated by date of service to develop factors that represent the rate of accumulation or rate of "completion".
3. Historical rates of completion by duration are used to derive projected rates of completion. Some of the methods used to develop projected completion factors are averages (e.g. harmonic averages, time weighted averages, geometric averages) and regression methods. Numerous items are considered when viewing these averages or regression statistics, such as the impact of high claims on perceived completion patterns.
4. For durations that exhibit a projected completion factor greater than the Valuation Actuary's chosen threshold (e.g. 80% complete), cumulative paid and incurred claims are divided by the projected completion factor to arrive at ultimate incurred claims. For durations that are less than the chosen threshold, a projection methodology is used. Similar to completion factor development, projection methodologies are worthy of a lengthy discussion. In general, an ultimate incurred claims PMPM is derived by projecting a recent 12-month period to the current month(s) and seasonally adjusting.
5. With all months having both a cumulative paid amount and an estimated ultimate incurred amount, the completion factors used in pricing are calculated by taking the quotient of the two. Allowed completion and incurred completion are assumed to be identical.
6. Both allowed and paid claims in the BEP are completed by applying completion factors by incurred month developed in Step 6.

$$BEP\ Incurred\ Claims\ = \sum \frac{BEP\ Paid\ Claims\ by\ Incurred\ Month}{Completion\ by\ Incurred\ Month}$$

$$BEP\ Allowed\ Claims = \sum \frac{BEP\ Paid\ Claims + BEP\ Member\ Cost\ Share\ by\ Incurred\ Month}{Completion\ by\ Incurred\ Month}$$

Benefit Categories

Claims in the benefit categories displayed in the URRT come directly from CBC's data warehouse. See Exhibit B for a description of benefits by benefit category.

Projection Factors

Changes in Morbidity of the Population Insured: CAAC does not expect changes in morbidity in its small group population from the experience period.
Changes in Benefits:

1. Pediatric Dental and Pediatric Vision: The following PMPM allowed charges are added to the projection period allowed claims PMPM:

    - Pediatric dental coverage: 5.01
    - Pediatric vision coverage 0.46

    These were added to the projected allowed claims in Exhibit B by applying a factor to the experience period, "Other Medical" claims. The development of pediatric dental and vision projected claims are described below.

    See Exhibit C for the pediatric dental and vision rate development.

Changes in Demographics: CAAC does not expect changes in demographics in its small group population.

Other Adjustments: Found in URRT, Worksheet 1, "Other".

- List-Billed Adjustment: CAAC is adjusting the claim experience for the impact of the list-billing rating methodology required under CFR Part 147.102. This section requires that family rates are calculated by summing the premiums for each individual family member, provided at most three child dependents under age 21 are taken into account. This rating rule requires an adjustment to premium.

Trend Factors: Trend levels reflect our best estimate of changes in utilization, provider reimbursement contracts, the network of facilities and providers, disease management initiatives and the impact of utilization management.

The following is a description of considerations used to determine trend.

1. Base Cost/ Change in hospital and physician contracting: The contracted increase in reimbursements to hospitals and physicians is the basis of cost trends. CAAC uses a

hospital and physician contracting model to determine future trends. This model contains all known contracted payment increases, as well as estimated increases in provider payments.

2. Utilization Considerations:
    a. Intensity of medical services rendered
    b. Changes in place of service (e.g. continued migration of inpatient stays to outpatient setting)
    c. Further migration from brand prescription drugs to generic prescription drugs
    d. Favorable impacts of value based benefits designs

3. Intensity: Intensity is defined as the amount of inputs used to provide each unit of service. This can best be seen in an example:

Year 2017

Type of Service	Units	Cost per Unit
X-Ray	1	$200
MRI	1	$5,000
Total	2	$5,200

Year 2018

Type of Service	Units	Cost per Unit
X-Ray	0	$200
MRI	2	$5,000
Total	2	$10,000

Total Annual Trend	92%

2. Underwriting Cycle: The underwriting cycle is defined as the tendency to swing between profitable and unprofitable periods over time. The underwriting cycle is exacerbated partly by pricing performed with incomplete information as to the level of current experience trends. A reaction delay occurs, as carriers tend to rely on measurements of past experience in developing current pricing assumptions. As a result, carriers are often increasing their pricing trends when actual experience trends have begun to decline, and decreasing their pricing trends actual trends are increasing. CAAC strives to mitigate the underwriting cycle by keeping trends consistent through times of increasing and decreasing claim costs and utilization.

See Exhibit E for CAAC's pricing trend, as well as cost and utilization components of the pricing trend.

Credibility Manual Rate Development

For the purpose of rate development, CAAC small group products are combined with other product offerings (HMO, Traditional, Comprehensive) from CBC subsidiaries. Combining the experience is actuarially justifiable for several reasons:

1. The demographics of members buying PPO and other products are similar.
2. Cost and utilization between PPO and other products are similar.
3. Medical policy between PPO and other products are almost identical, with the exception of referrals and no out-of-network benefit on HMO.

The credibility manual PMPMs are the combination of CAAC, Capital Advantage Insurance Company (CAIC), and Keystone Health Plan Central (KHPC) HMO data, and vendor pediatric vision data. All data is trended and benefit-adjusted in the same manner as the experience data (same projection factors and trend).

Credibility of Experience

Credibility Manual Rate Development: As seen in the URRT, the CAAC experience data and the credibility manual are very closely aligned. The credibility manual was given 100% credibility because it encompasses all small group membership.

Paid to Allowed Ratio

CAAC used the prescribed URRT allowed claims rate development methodology in conjunction with a paid and incurred rate development methodology to determine final premium rates. The URRT projects allowed claims, and uses a paid-to-allowed ratio in order to adjust allowed claims to paid levels. This value is then used to develop premiums. In order to determine the paid-to-allowed ratio, CAAC projected paid and incurred claims, adjusted for benefits, to the experience period.

Projected Paid and Incurred Claims are calculated as follows:

1. Gather claims experience as described in the Data section above.
    a. Base Experience Period (BEP) Paid Claims
    b. BEP Member Months

2. Develop BEP *Paid and Incurred Claims*:

$$BEP\ Paid\ and\ Incurred\ Claims = \frac{BEP\ Paid\ Claims}{Completion\ Factor}$$

    The development of completion factors is described in Experience Period Premium and Claims above.

3. Develop the *BEP Paid and Incurred Claim PMPM*:

$$BEP\ Paid\ and\ Incurred\ Claim\ PMPM = \frac{BEP\ Paid\ and\ Incurred\ Claims}{BEP\ Member\ Months}$$

4. Develop *Trended Claim PMPM*: Using the aggregate trend described in the Projection Factors section above, trend the BEP Paid and Incurred Claim PMPM from the midpoint of the experience period to the midpoint of the rating period.

$$Trended\ Claim\ PMPM = [BEP\ Paid\ and\ Incurred\ Claim\ PMPM] \times (1 + [Trend\%])^{Trend\ Months/12}$$

5. Develop *Projected Paid and Incurred Claim PMPM*:

$$Projected\ Paid\ and\ Incurred\ Claims\ PMPM = [Trended\ Claim\ PMPM] \times [Benefit\ Adjustment] \times [Morbidity\ Adjustment] \times [List - Billed\ Adjustment]$$

The *Benefit Adjustment*, *Morbidity Adjustment*, and *List-Billed Adjustment* are discussed in the Projections Factors section above.

6. Develop *Projected Claims PMPM by Benefit* as follows:

    a. CAAC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a $0 office visit copayment and a $25 ER copayment. Given a particular benefit design (for example, $20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on cumulative probability distributions (CPDs), where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.
    b. This actuarial cost model derives a Manual Cost for each benefit design in the experience period, as well as plans being offered in the projection period. The average Manual Cost of the experience is compared to the Manual Cost of the base plan (Healthy Benefits PPO 0.0 15 | Rx $250). The projected experience period data is then adjusted to the base plan:

$$Benefit\ Level\ Adjustment = \frac{Average\ Manual\ Cost\ in\ Experience\ Period}{Manual\ Cost\ of\ Base\ Plan}$$

c. The *Projected Paid and Incurred Claim PMPM* (Step 5) is then adjusted to the Base Plan as follows:

$$Base\ Plan\ Paid\ and\ Incurred\ Claims\ PMPM = \frac{Benefit\ Adjusted\ Paid\ and\ Incurred\ Claims\ PMPM}{Benefit\ Level\ Adjustment}$$

d. Each additional benefit design has its own unique Manual Cost, which can then be compared to the Base Plan to develop a Benefit Relativity:

$$Benefit\ Relativity\ A = \frac{Manual\ Cost\ of\ Benefit\ A}{Manual\ Cost\ of\ Base\ Plan}$$

e. The Benefit Relativity developed in d. above is then used as a gauge to develop a final *Pricing Relativity*. This pricing relativity is developed using actuarial judgment including the following considerations:

i. Final premium relativities must make sense based on benefits. For example, the annual cost difference between a PPO 2000 and PPO 1000 must be less than $1000.

ii. Adjustments for plan designs that fall outside of the actuarial cost model.

a. So the *Projected Claims PMPM by Benefit* is:

$$\begin{aligned} Projected\ Claims\ PMPM\ Benefit\ A \\ = Projected\ Claims\ PMPM\ Base\ Plan \\ \times Pricing\ Relativity\ A \end{aligned}$$

b. And to arrive at the *Total Projected Claims PMPM*, CAAC assumes a distribution of members across the benefit plans being offered in 2016. The *Total Projected Claims PMPM* :

$$\begin{aligned} = Projected\ Claims\ PMPM\ Benefit\ A\ \times Expected\ Member\ Dist\ of\ Benefit\ A \\ + Projected\ Claims\ PMPM\ Benefit\ B \\ \times Expected\ Member\ Dis\ of\ Benefit\ B + \cdots \end{aligned}$$

7. The Paid-To-Allowed Ratio is then:

$$Paid\ to\ Allowed\ Ratio = \frac{Total\ Projected\ Claims\ PMPM}{Projected\ Allowed\ Claims\ at\ Current\ Benefits}$$

See Exhibit G for the development of the *Paid-to-Allowed Ratio*.

Risk Adjustment and Reinsurance

Projected Risk Adjustments PMPM:

Relevant to 2017 pricing is the impact of Commercial Risk Adjustment (CRA) payment transfers that are expected to be earned. The pricing impact is:

$$[Net\ Projected\ Risk\ Adjustments\ PMPM] = [Projected\ CRA\ Transfer\ PMPM] - [Risk\ Adjustment\ Fee\ PMPM]$$

The following items are those that we deem important in generating a CRA payment transfer adjustment:

1. Risk profile of the those enrolled in CRA eligible plans for the market or state (i.e. competitors) relative to risk profile of CRA eligible membership enrolled in our plans
2. Statewide average premiums
3. Current market penetration of this company and competitors in the market and in the state
4. The impact of transitional policies throughout the remainder of 2016 and 2017

2017/2018 projected risk adjustment is based on projections for 2016. CBC is estimating a higher PMPM payable amount for 2017/2018 due to market intelligence. The broker community has indicated that competitors plan to move low-risk small group business to ASO products, which will result in deterioration of the PPACA insured pool.

CAAC is using a credibility manual to derive premiums, as described in the Credibility Manual Rate Development section above. Likewise, CAAC is using combined risk adjustment results from CAAC, CAIC, and KHPC to project 2017. 2016 projected risk adjustment results by company can be found on Exhibit K.

To fund the HHS-risk adjustment program, issuers will remit to HHS a fee of $0.13 PMPM. The Risk Adjustment Fee PMPM is included in the URRT Worksheet 1, "Projected Risk Adjustments PMPM".

Projected ACA Reinsurance Recoveries:

$$[Net\ Projected\ ACA\ Reinsurance\ Recoveries\ PMPM] = [Projected\ ACA\ Reinsurance\ Recoveries\ PMPM] - [Reinsurance\ Contribution\ PMPM]$$

Reinsurance recoveries are equal to $0 in the small group market, as shown in the URRT Worksheet 1, "Projected ACA reinsurance recoveries, net of rein prem, PMPM".

Non-Benefit Expenses and Profit & Risk

Administrative Expense Load:

1. Administrative Expense: Calculated using an allocation method from CAAC's finance department, and trended to the rating period. Costs are allocated according to results reported through a company-wide questionnaire. On an annual basis, each cost center within the company completes a questionnaire listing the distribution of costs (in percentage terms) by product as well as by market segment. For example, the questionnaire will ask for the percentage of time spent on PPO versus HMO versus Drug versus Medicare. And separately will ask for the percentage of time spent on large group, small group, individual, and government programs. Using those distributions, all costs needed to perform the business are allocated to the proper market segments and lines of business. The administrative expense applied in the rate development is the total expense allocated to CAAC small group products. This includes administrative fee incurred to administer Rx rebates. Administrative expenses are included in the URRT Worksheet 1, "Administrative Load".
2. Broker Expense: Calculated based on CAAC's explicit per contract broker fee. Broker Expense is included in the URRT Worksheet 1, "Administrative Load".
3. Member Out-Of-Pocket (OOP) and Ways to Save:
    a. Description: These products offer enhanced transparency to cost savings potential both prospectively and retrospectively. These are new services included in each of CAAC's small group plans that work to decrease costs by engaging members in their health care decisions. The Member OOP program will show a member, prospectively, the value of a service and the impact of member cost-sharing when that service is incurred. It allows a member to shop for the best price while introducing transparency related to the member's expected cost share at the time of service. The "Ways to Save" program allows members to receive alerts, retrospectively, informing them of cost savings that could have been incurred had they have known about competing medical providers in the area. The alerts are retrospective and offer transparency around member's healthcare options.
    b. Costs: The vendor of these products charge both per contract per year (PCPY) user fees as well as initial implementation fees and annual subscription fees. The PCPY user fees are $0.115 and $1.7955 for "Member Out of Pocket" and "Way to Save" respectively. The vendor also charges a 25% administrative load, annual subscription fee, and a $100,000 implementation fee. The implementation fee is amortized over 5 years across several hundred thousand members. Using book of business member-to-contract ratios and converting to a per member per month (PMPM), in conjunction with the administrative load and implementation fee yields a PMPM charge of $0.0128 and $.20 for Member Out of Pocket and Ways to Save respectively. Annual subscription fees charged yields another $0.04 PMPM. All of these items combined allow us to arrive at a requested $0.25 PMPM. These programs are included in the URRT Worksheet 1, "Administrative Load".
4. Value-Based Benefits (VBB): Standard with each plan, Capital BlueCross includes wellness incentives to maximize the likelihood that consumers make positive behavioral changes, which lead to better health, and curbed health care costs for employers and employees alike. The incentive is as follows:
    a. Complete CBC Personal Profile and receive a gift card reward.
    b. Complete one online coaching program and receive a gift card reward.

c. The wellness program is administered through a vendor and costs are based on vendor fees.

5. Identity Theft Coverage: Identity protection offering will include the following components:
    a. Credit monitoring – Monitors activity that may affect credit
    b. Fraud detection – Identifies potentially fraudulent use of identity or credit
    c. Fraud resolution support – Assists members in addressing issues that arise in relation to credit monitoring and fraud detection

Profit (or Contribution to Surplus) & Risk Margin:

1. Contingency: Contingency is included in the URRT Worksheet 1, "Profit and Risk".

Taxes and Fees:

2. Fee for Patient-Centered Outcomes Research Trust Fund (PCOR): As per the Notice of Proposed Rulemaking for Fees on Health Insurance Policies and Self-Insured Plans for the Patient-Centered Outcomes Research Trust Fund (REG-136008-11), 77 Fed. Reg. 22691: For policy years ending on or after October 1, 2013, and before October 1, 2014, the applicable dollar amount in $2 per member per year ($0.17 PMPM), trended annually. At an estimated trend of 4%, the 2016 projected fee is $0.18 PMPM. PCOR is included in the URRT Worksheet 1, "Taxes and Fees".
3. Health Insurer Fee (HIF) – Section 9010 of PPACA and Section 1406 of the Reconciliation Act (which modified PPACA) refer to HIF. The fee is a fixed-dollar amount distributed across health insurance providers: $8 billion in 2014, $11.3 billion in 2015-2016, suspended in 2017, and $14.3 billion in 2018. After 2018, HIF rises according to an index based on net premium growth. See Exhibit H. The HIF is included in the URRT Worksheet 1, "Taxes and Fees".
4. Exchange Fee – CAAC is not offering any plans of the federally-facilitated exchange.
5. Federal Income Tax: The projected Federal Income Tax is included in the URRT Worksheet 1, "Taxes and Fees".

Additional Fee:

1. Health Reimbursement Account (HRA) Administrative Fee: Charged to HRA plans to cover the administration of bank accounts linked to these plans. Because this is a financial service offered by CAAC and not a service that is required to obtain health care, the HRA admin fee is only applied to HRA plans, and should not be spread across all plans.

See Exhibit H for all CAAC small group retention values.

Projected Loss Ratio

See Exhibit I for the projected loss ratio calculation. The projected loss ratio is calculated using the federally prescribed MLR methodology.

Single Risk Pool

The data used to develop rates and shown in the URRT abides by 45 CFR part 156.80(d) single risk pool requirements. The single risk pool reflects all covered lives for every non-grandfathered product/plan combination for CAAC in the small group market segment. The single risk pool includes transitional products/plans for purposes of base rate experience. No explicit adjustment is made for the impact of transitional policies to the projection period.

Index Rate

The experience period index rate is CAAC's allowed claims PMPM, set in accordance with the single risk pool provision. All CAAC covered benefits are categorized as Essential Health Benefits (EHBs), therefore no adjustment was made to the experience period index. Only two EHB categories are not included in the experience period: pediatric dental and pediatric vision. Pediatric dental and pediatric vision claim PMPMs are added to the projected index rate as described in the Projection Factors section above.

Projected Allowed Claims: The CAAC experience period allowed claims, benefit-adjusted, trended to the projection period (See Projection Factors section above), and credibility adjusted, is the *Projected Allowed Claims at Current Benefits.* This number is reflected in Worksheet 1 of the URRT ("Projected Allowed Experience Claims PMPM (w/ applied credibility if applicable)").

To calculate the projected index rate:

1. Start with *Projected Allowed Claims at Current Benefits*
2. The *Projected Allowed Claims at Current Benefits* reflect EHBs 100 percent, so no adjustment needs to be made to add EHBs and remove non-EHB claim cost. This is the index rate for groups renewing July – September (Index 3).
3. Index 1 and Index 2 are taken from the annual filing. Index 3 (July – September) is calculated in step 2, and Index 4 (October – December) is (Index 3) x (1+Trend ^ (3/12)).
4. The final projected index rate is the member weighted average of Index 1, Index 2, Index 3, and Index 4. Member distribution is based on CAAC's current enrollment by renewal month.

See Exhibit J for the calculation of the Index Rate.

Market Adjusted Index Rate

The Market Adjusted Index Rate is calculated as the Index Rate adjusted for all allowable market-wide modifiers defined in the market rating rules, 45 CFR Part 156.80(d)(1). So,

$$[Market\ Adjusted\ Index\ Rate] = [Index\ Rate] - [Net\ Projected\ ACA\ Reinsurace\ Recoveries] - [Net\ Projected\ Risk\ Adjustments\ PMPM] + [Exchange\ Fees\ PMPM]$$

See Exhibit K for the development of the Market Adjusted Index Rate.

Plan Adjusted Index Rate

The Plan Adjusted Index Rates are included in Worksheet 2, Section IV of the URRT.

The following adjustments were used to derive the Plan Adjusted Index Rate:

1. Actuarial Value and Cost Sharing adjustment: The Actuarial Value and Cost Sharing Adjustment is determined using CAAC's actuarial cost model. CAAC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a $0 office visit copayment and a $25 ER copayment. Given a particular benefit design (for example, $20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a claim PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on CPDs, where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.
2. Provider Network: The Provider network is the across the projection period and experience period, and across all plans, so no adjustment is necessary.
3. Adjustment for benefits in addition to EHBs: No benefits other than EHBs are included in the plans, so no adjustment is necessary.
4. Catastrophic Plans: Does not apply to the small group market.
5. Adjustment for distribution and administrative costs: Described in Non-Benefit Expenses and Profit & Risk section above.
6. Tobacco Adjustment: No tobacco factor is applied, so no adjustment is necessary.

The development of the Plan Adjusted Index rate is found in Exhibit L. The average projected Plan Adjusted Index Rate is found in Exhibit M.

Calibration

A calibration must be performed in order to apply the allowable rating factors (age and geography) to the Plan Adjusted Rate in order to calculate the Consumer Adjusted Premium Rates.

Age Curve Calibration: The projected average age factor is calculated by taking the member-weighted average of current small group enrollment by age in CAAC, CAIC, and KHPC

combined. Age factors are applied in accordance with CMS's Standard Age Curve. The average age factor is 1.524, equating to an average age of 46, according to the CMS Age Curve.

Geographic Factor Calibration: The projected average geographic factor is calculated by taking the member-weighted average of current small group enrollment by employer geographic location in CAAC, CAIC, and KHPC combined.

> **Geographic Factors:** CMS has approved nine geographical rating areas (GRA) in the state of Pennsylvania. CAAC operates in a 21-county area of Pennsylvania, encompassing three of the nine defined regions. CAAC performed regional analysis to quantify the cost difference between the three regions in our service area. The analysis gathered allowed claims in a 12-month period by region, normalized for demographics. We then compared the claim cost for each of the three regions, and calculated cost differentials between the regions, mostly due to differences in hospital contracting between regions. The data from the analysis is found in Exhibit Q.

The calibration is:

$$[Calibrated\ Plan\ Adjusted\ Index\ Rate] = [Plan\ Adjusted\ Index\ Rate] \div ([Age\ Curve\ Calibration] \times [Geographic\ Factor\ Calibration])$$

All consumer-level adjustments are applied uniformly to all plans in the Single Risk Pool. These adjustments do not vary by plan. The calibration factors and development are found on Exhibit N and Exhibit O.

Consumer Adjusted Premium Rate Development

The Consumer Adjusted Premium Rate is developed as follows:

1. Member-Level Consumer Adjusted Premium Rate:

$$[Member - Level\ Consumer\ Adjusted\ Premium\ Rate] = [Calibrated\ Plan\ Adjusted\ Index\ Rate] \times [Age\ Factor] \times [Geographic\ Factor]$$

2. $[Family\ Consumer\ Adjusted\ Premium\ Rate] = \sum[Member - Level\ Consumer\ Adjusted\ Premium\ Rate]$
   With no more than three child dependents under age 21 taken into account

Small Group Plan Premium Rates: CAAC is filing quarterly small group rates with trend. Therefore, the Index Rate, Market Adjusted Index Rate, and Plan Adjusted Index Rate reflect the member-weighted average premium of the calendar year. The trend used to develop the quarterly rates is shown in Exhibit M.

Quarterly Base Rates, i.e. Calibrated Plan Adjusted Index Rates, are found on Exhibit P.

AV Metal Values

AV Metal Values included in Worksheet 2 of the URRT were based on the federally issued AV Calculator.

AV Pricing Values

All AV Pricing values were developed using CAAC's actuarial cost model and actuarial judgment described in section Paid to Allowed above. Differences in health status are not included.

Membership Projection

The membership projections found in Worksheet 2 of the URRT were developed by assuming that a percentage of current small group members will purchases coverage through CAAC. This is consistent with current enrollment, and reflects new 2017 plan offerings in CBC-subsidiaries. The projection also considers transitional policies mapping to single-risk-pool plans.

Terminated Products

See Exhibit R for a list of terminated products.

Attachments and Examples

The following is a list of Exhibits and Data to support this filing:

Exhibit A – Benefit Summary
Exhibit A1 – Benefit Change Summary

PA Rate Template Part I through Part V

Actuarial Statement

I, [redacted], ASA, MAAA, am of the opinion that this filing is in compliance with the applicable Federal and State Laws and Regulations concerning the Patient Protection and Affordable Care Act and the Health Care and Education Reconciliation Act of 2010.

I, [redacted], ASA, MAAA, do hereby certify that:

1. This filing has been prepared in accordance with the following:
    a. Actuarial Standard of Practice No. 5, "Health and Disability Claims"
    b. Actuarial Standard of Practice No. 8, "Regulatory Filings for Rates and Financial Projections for Health Plans"
    c. Actuarial Standard of Practice No. 12, "Risk Classification"
    d. Actuarial Standard of Practice No. 23, "Data Quality"
    e. Actuarial Standard of Practice No. 25, "Credibility Procedures Applicable to Accident and Health, Group Term Life, and Property/Casualty Coverage"
    f. Actuarial Standard of Practice No. 26, "Compliance with Statutory and Regulatory Requirements for the Actuarial Certification of Small Employer Health Benefit Plans"
    g. Actuarial Standard of Practice No. 41, "Actuarial Communications".

2. The index rate is:
    a. Projected in compliance with all applicable state and federal statutes and regulations (45 CFR 156.80(d) (1)).
    b. Developed in compliance with the applicable Actuarial Standards of Practice.
    c. Reasonable in relation to the benefits provided and the population anticipated to be covered.
    d. Neither excessive nor deficient.
    e. Adjusted by only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) to generate plan level rates.

3. The percent of total premium that represents essential health benefits included in Worksheet 2, Sections III and IV were calculated in accordance with actuarial standards of practice.

4. The AV Calculator was used to determine the AV Metal Values shown in Worksheet 2 of the Part I Unified Rate Review Template for all plans, and in accordance with CFR 156.135(b)(2) as necessary. For any plan requiring an alternative method, the development of the actuarial value is based on one of the acceptable alternative methods outlined in 156.135(b)(2) or 156.135(b)(3) for benefits that deviate substantially from the parameters of the AVC and have a material impact on the actuarial value.

a. The analysis was
    i. conducted by a member of the American Academy of Actuaries, and
    ii. performed in accordance with generally accepted actuarial principles and methods.

5. All factor, benefit and other changes from the prior approved filing have been disclosed in the actuarial memorandum.

6. New plans cannot be considered modifications of existing plans under the uniform modification standards in 45 CFR 147.106.

7. The information presented in the PA Actuarial Memorandum and PA Actuarial Memorandum Rate Exhibits is consistent with the information presented in the 2017 Rate Filing Justification.

Capital BlueCross

CAPITAL ADVANTAGE ASSURANCE COMPANY, INC.

ACTUARIAL MEMORANDUM
Small Group Rates
Effective January 1, 2018

General Information

Company Information

- Company Legal Name: Capital Advantage Assurance Company – CAAC
- State: PA
- HIOS Issuer ID: 45127
- Market: Small Group
- Effective Date: 1/1/2018

PID Company Information

- Company Name: Capital Advantage Assurance Company (CAAC)
- NAIC: 14411
- Market: Small Group
- On/Off Exchange: Off Exchange
- Effective Date: 1/1/2018
- Average Annual Rate Change: 7.9%
- Range of Requested Rate Change: 6.9% to 11.7%
- Product: PPO and EPO
- Rating Areas: 6,7,9
- Metal Levels: Platinum, Gold, Silver, Bronze
- Current Covered Lives and Policyholders: 76,192/43,716
- Number of Plans: 32
- Contract Form #: C18-CAAC-SGP
- Form Filing SERFF #: CABC-131039475
- Binder SERFF #: CABC-PA18-125072238
- HIOS Issuer ID: 45127
- HIOS Submission Tracking Number: 45127-956004650371312672

Company Contact Information

- Primary Contact Name: [redacted]
- Primary Contact Telephone Number: [redacted]
- Primary Contact Email Address: [redacted]

Scope and Purpose

By this filing, Capital Advantage Assurance Company (CAAC), a subsidiary of Capital BlueCross (CBC), submits rates for products to be made available to all small groups effective January 1, 2018. CAAC will only offer small group products off the federally-facilitated exchange.

Rate History and Proposed Variations in Rate Changes

Small Group	CAAC	1/1/2014	CABC- 12903497	0.00%
Small Group	CAAC	1/1/2015	CABC-129635598	5.39%
Small Group	CAAC	1/1/2016	CABC-130076031	-2.40%
Small Group	CAAC	1/1/2017	CABC-130539601	3.40%

Proposed Rate Increases

CAAC is proposing an aggregate annual increase of 7.9%. The rate change does vary by plan. The rate change is calculated in PA Rate Template Part III, Table 10, cell AC15.

Membership

Membership is shown in PA Rate Template Part I, Table 1.

Benefit Changes 2017-2018

There are several benefit changes being implemented in 2018. All benefit changes comply with the uniform modification of coverage standards described in 45 CFR 147.106(e). Any plan with a benefit change that did not meet the uniform modification of coverage standard was terminated, and a new plan was created in its place. All terminated plans are listed in Exhibit R, and a summary of proposed 2018 benefits is included in Exhibit A.

Benefit changes by plan are listed in Exhibit A1, highlighted in yellow.

Experience Period Premium and Claims

Base Experience Period: The base experience period (BEP) includes completed fee-for-service paid and incurred claims for dates of service between January 1, 2016 and December 31, 2016.

Paid Through Date: Claims in the BEP are paid through February 28, 2017

Premiums (net of MLR Rebate) in Experience Period: Premiums are calculated on an earned basis in the BEP. MLR rebate adjustments are equal to zero as CAAC does not expect to refund any MLR rebates.

Allowed and Incurred Claims during the Experience Period:

	Incurred	Allowed
Amount of claims processed through the issuer's claim system:	$289,082,408	$345,008,301
Amount of claims processed outside of the issuer's claim system:	$0	$0
Amount of claims that represent best estimate of incurred but not paid:	$7,507,598	$9,747,031

Allowed claims are developed by combining paid claims with member cost-sharing.

Estimated Incurred but Not Paid Claims: Paid claims by date of service come directly from CBC's data warehouse. The method for calculating incurred claims in the BEP is as follows:

1. Historical fee-for-service claims are viewed by date of service and date of payment in a claims triangle.
2. The claims triangle payments are then accumulated by date of service to develop factors that represent the rate of accumulation or rate of "completion".
3. Historical rates of completion by duration are used to derive projected rates of completion. Some of the methods used to develop projected completion factors are averages (e.g. harmonic averages, time weighted averages, geometric averages) and regression methods. Numerous items are considered when viewing these averages or regression statistics, such as the impact of high claims on perceived completion patterns.
4. For durations that exhibit a projected completion factor greater than the Valuation Actuary's chosen threshold (e.g. 80% complete), cumulative paid and incurred claims are divided by the projected completion factor to arrive at ultimate incurred claims. For durations that are less than the chosen threshold, a projection methodology is used. Similar to completion factor development, projection methodologies are worthy of a lengthy discussion. In general, an ultimate incurred claims PMPM is derived by projecting a recent 12-month period to the current month(s) and seasonally adjusting.
5. With all months having both a cumulative paid amount and an estimated ultimate incurred amount, the completion factors used in pricing are calculated by taking the quotient of the two. Allowed completion and incurred completion are assumed to be identical.
6. Both allowed and paid claims in the BEP are completed by applying completion factors by incurred month developed in Step 6.

$$BEP\ Incurred\ Claims\ = \sum \frac{BEP\ Paid\ Claims\ by\ Incurred\ Month}{Completion\ by\ Incurred\ Month}$$

$$BEP\ Allowed\ Claims = \sum \frac{BEP\ Paid\ Claims + BEP\ Member\ Cost\ Share\ by\ Incurred\ Month}{Completion\ by\ Incurred\ Month}$$

Benefit Categories

Claims in the benefit categories displayed in the URRT come directly from CBC's data warehouse. See Exhibit B for a description of benefits by benefit category.

Projection Factors

Changes in Morbidity of the Population Insured: CAAC does not expect changes in morbidity in its small group population from the experience period.
Changes in Benefits:

1. Pediatric Dental and Pediatric Vision: The following PMPM allowed charges are added to the projection period allowed claims PMPM:

    - Pediatric dental coverage: 5.01
    - Pediatric vision coverage 0.46

    These were added to the projected allowed claims in Exhibit B by applying a factor to the experience period, "Other Medical" claims. The development of pediatric dental and vision projected claims are described below.

    See Exhibit C for the pediatric dental and vision rate development.

Changes in Demographics: CAAC does not expect changes in demographics in its small group population.

Other Adjustments: Found in URRT, Worksheet 1, "Other".

- List-Billed Adjustment: CAAC is adjusting the claim experience for the impact of the list-billing rating methodology required under CFR Part 147.102. This section requires that family rates are calculated by summing the premiums for each individual family member, provided at most three child dependents under age 21 are taken into account. This rating rule requires an adjustment to premium.

Trend Factors: Trend levels reflect our best estimate of changes in utilization, provider reimbursement contracts, the network of facilities and providers, disease management initiatives and the impact of utilization management.

The following is a description of considerations used to determine trend.

1. Base Cost/ Change in hospital and physician contracting: The contracted increase in reimbursements to hospitals and physicians is the basis of cost trends. CAAC uses a

hospital and physician contracting model to determine future trends. This model contains all known contracted payment increases, as well as estimated increases in provider payments.

2. Utilization Considerations:
    a. Intensity of medical services rendered
    b. Changes in place of service (e.g. continued migration of inpatient stays to outpatient setting)
    c. Further migration from brand prescription drugs to generic prescription drugs
    d. Favorable impacts of value based benefits designs

3. Intensity: Intensity is defined as the amount of inputs used to provide each unit of service. This can best be seen in an example:

Year 2017

Type of Service	Units	Cost per Unit
X-Ray	1	$200
MRI	1	$5,000
Total	2	$5,200

Year 2018

Type of Service	Units	Cost per Unit
X-Ray	0	$200
MRI	2	$5,000
Total	2	$10,000

Total Annual Trend	92%

2. Underwriting Cycle: The underwriting cycle is defined as the tendency to swing between profitable and unprofitable periods over time. The underwriting cycle is exacerbated partly by pricing performed with incomplete information as to the level of current experience trends. A reaction delay occurs, as carriers tend to rely on measurements of past experience in developing current pricing assumptions. As a result, carriers are often increasing their pricing trends when actual experience trends have begun to decline, and decreasing their pricing trends actual trends are increasing. CAAC strives to mitigate the underwriting cycle by keeping trends consistent through times of increasing and decreasing claim costs and utilization.

See Exhibit E for CAAC's pricing trend, as well as cost and utilization components of the pricing trend.

Credibility Manual Rate Development

For the purpose of rate development, CAAC small group products are combined with other product offerings (HMO, Traditional, Comprehensive) from CBC subsidiaries. Combining the experience is actuarially justifiable for several reasons:

1. The demographics of members buying PPO and other products are similar.
2. Cost and utilization between PPO and other products are similar.
3. Medical policy between PPO and other products are almost identical, with the exception of referrals and no out-of-network benefit on HMO.

The credibility manual PMPMs are the combination of CAAC, Capital Advantage Insurance Company (CAIC), and Keystone Health Plan Central (KHPC) HMO data, and vendor pediatric vision data. All data is trended and benefit-adjusted in the same manner as the experience data (same projection factors and trend).

Credibility of Experience

Credibility Manual Rate Development: As seen in the URRT, the CAAC experience data and the credibility manual are very closely aligned. The credibility manual was given 100% credibility because it encompasses all small group membership.

Paid to Allowed Ratio

CAAC used the prescribed URRT allowed claims rate development methodology in conjunction with a paid and incurred rate development methodology to determine final premium rates. The URRT projects allowed claims, and uses a paid-to-allowed ratio in order to adjust allowed claims to paid levels. This value is then used to develop premiums. In order to determine the paid-to-allowed ratio, CAAC projected paid and incurred claims, adjusted for benefits, to the experience period.

Projected Paid and Incurred Claims are calculated as follows:

1. Gather claims experience as described in the Data section above.
    a. Base Experience Period (BEP) Paid Claims
    b. BEP Member Months

2. Develop BEP *Paid and Incurred Claims*:

$$BEP\ Paid\ and\ Incurred\ Claims = \frac{BEP\ Paid\ Claims}{Completion\ Factor}$$

    The development of completion factors is described in Experience Period Premium and Claims above.

3. Develop the *BEP Paid and Incurred Claim PMPM*:

$$BEP\ Paid\ and\ Incurred\ Claim\ PMPM = \frac{BEP\ Paid\ and\ Incurred\ Claims}{BEP\ Member\ Months}$$

4. Develop *Trended Claim PMPM*: Using the aggregate trend described in the Projection Factors section above, trend the BEP Paid and Incurred Claim PMPM from the midpoint of the experience period to the midpoint of the rating period.

$$Trended\ Claim\ PMPM = [BEP\ Paid\ and\ Incurred\ Claim\ PMPM] \times (1 + [Trend\%])^{Trend\ Months/12}$$

5. Develop *Projected Paid and Incurred Claim PMPM*:

$$Projected\ Paid\ and\ Incurred\ Claims\ PMPM = [Trended\ Claim\ PMPM] \times [Benefit\ Adjustment] \times [Morbidity\ Adjustment] \times [List - Billed\ Adjustment]$$

The *Benefit Adjustment*, *Morbidity Adjustment*, and *List-Billed Adjustment* are discussed in the Projections Factors section above.

6. Develop *Projected Claims PMPM by Benefit* as follows:

    a. CAAC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a $0 office visit copayment and a $25 ER copayment. Given a particular benefit design (for example, $20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on cumulative probability distributions (CPDs), where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.
    b. This actuarial cost model derives a Manual Cost for each benefit design in the experience period, as well as plans being offered in the projection period. The average Manual Cost of the experience is compared to the Manual Cost of the base plan (Healthy Benefits PPO 0.0 15 | Rx $250). The projected experience period data is then adjusted to the base plan:

$$Benefit\ Level\ Adjustment = \frac{Average\ Manual\ Cost\ in\ Experience\ Period}{Manual\ Cost\ of\ Base\ Plan}$$

c. The *Projected Paid and Incurred Claim PMPM* (Step 5) is then adjusted to the Base Plan as follows:

$$Base\ Plan\ Paid\ and\ Incurred\ Claims\ PMPM = \frac{Benefit\ Adjusted\ Paid\ and\ Incurred\ Claims\ PMPM}{Benefit\ Level\ Adjustment}$$

d. Each additional benefit design has its own unique Manual Cost, which can then be compared to the Base Plan to develop a Benefit Relativity:

$$Benefit\ Relativity\ A = \frac{Manual\ Cost\ of\ Benefit\ A}{Manual\ Cost\ of\ Base\ Plan}$$

e. The Benefit Relativity developed in d. above is then used as a gauge to develop a final *Pricing Relativity*. This pricing relativity is developed using actuarial judgment including the following considerations:

i. Final premium relativities must make sense based on benefits. For example, the annual cost difference between a PPO 2000 and PPO 1000 must be less than $1000.

ii. Adjustments for plan designs that fall outside of the actuarial cost model.

a. So the *Projected Claims PMPM by Benefit* is:

$$\begin{aligned} Projected\ Claims\ PMPM\ Benefit\ A \\ = Projected\ Claims\ PMPM\ Base\ Plan \\ \times Pricing\ Relativity\ A \end{aligned}$$

b. And to arrive at the *Total Projected Claims PMPM*, CAAC assumes a distribution of members across the benefit plans being offered in 2016. The *Total Projected Claims PMPM* :

$$\begin{aligned} = Projected\ Claims\ PMPM\ Benefit\ A\ \times Expected\ Member\ Dist\ of\ Benefit\ A \\ + Projected\ Claims\ PMPM\ Benefit\ B \\ \times Expected\ Member\ Dis\ of\ Benefit\ B + \cdots \end{aligned}$$

7. The Paid-To-Allowed Ratio is then:

$$Paid\ to\ Allowed\ Ratio = \frac{Total\ Projected\ Claims\ PMPM}{Projected\ Allowed\ Claims\ at\ Current\ Benefits}$$

See Exhibit G for the development of the *Paid-to-Allowed Ratio*.

Risk Adjustment and Reinsurance

Projected Risk Adjustments PMPM:

Relevant to 2017 pricing is the impact of Commercial Risk Adjustment (CRA) payment transfers that are expected to be earned. The pricing impact is:

$$[Net\ Projected\ Risk\ Adjustments\ PMPM] = [Projected\ CRA\ Transfer\ PMPM] - [Risk\ Adjustment\ Fee\ PMPM]$$

The following items are those that we deem important in generating a CRA payment transfer adjustment:

1. Risk profile of the those enrolled in CRA eligible plans for the market or state (i.e. competitors) relative to risk profile of CRA eligible membership enrolled in our plans
2. Statewide average premiums
3. Current market penetration of this company and competitors in the market and in the state
4. The impact of transitional policies throughout the remainder of 2016 and 2017

2017/2018 projected risk adjustment is based on projections for 2016. CBC is estimating a higher PMPM payable amount for 2017/2018 due to market intelligence. The broker community has indicated that competitors plan to move low-risk small group business to ASO products, which will result in deterioration of the PPACA insured pool.

CAAC is using a credibility manual to derive premiums, as described in the Credibility Manual Rate Development section above. Likewise, CAAC is using combined risk adjustment results from CAAC, CAIC, and KHPC to project 2017. 2016 projected risk adjustment results by company can be found on Exhibit K.

To fund the HHS-risk adjustment program, issuers will remit to HHS a fee of $0.13 PMPM. The Risk Adjustment Fee PMPM is included in the URRT Worksheet 1, "Projected Risk Adjustments PMPM".

Projected ACA Reinsurance Recoveries:

$$[Net\ Projected\ ACA\ Reinsurance\ Recoveries\ PMPM] = [Projected\ ACA\ Reinsurance\ Recoveries\ PMPM] - [Reinsurance\ Contribution\ PMPM]$$

Reinsurance recoveries are equal to $0 in the small group market, as shown in the URRT Worksheet 1, "Projected ACA reinsurance recoveries, net of rein prem, PMPM".

Non-Benefit Expenses and Profit & Risk

Administrative Expense Load:

1. Administrative Expense: Calculated using an allocation method from CAAC's finance department, and trended to the rating period. Costs are allocated according to results reported through a company-wide questionnaire. On an annual basis, each cost center within the company completes a questionnaire listing the distribution of costs (in percentage terms) by product as well as by market segment. For example, the questionnaire will ask for the percentage of time spent on PPO versus HMO versus Drug versus Medicare. And separately will ask for the percentage of time spent on large group, small group, individual, and government programs. Using those distributions, all costs needed to perform the business are allocated to the proper market segments and lines of business. The administrative expense applied in the rate development is the total expense allocated to CAAC small group products. This includes administrative fee incurred to administer Rx rebates. Administrative expenses are included in the URRT Worksheet 1, "Administrative Load".
2. Broker Expense: Calculated based on CAAC's explicit per contract broker fee. Broker Expense is included in the URRT Worksheet 1, "Administrative Load".
3. Member Out-Of-Pocket (OOP) and Ways to Save:
    a. Description: These products offer enhanced transparency to cost savings potential both prospectively and retrospectively. These are new services included in each of CAAC's small group plans that work to decrease costs by engaging members in their health care decisions. The Member OOP program will show a member, prospectively, the value of a service and the impact of member cost-sharing when that service is incurred. It allows a member to shop for the best price while introducing transparency related to the member's expected cost share at the time of service. The "Ways to Save" program allows members to receive alerts, retrospectively, informing them of cost savings that could have been incurred had they have known about competing medical providers in the area. The alerts are retrospective and offer transparency around member's healthcare options.
    b. Costs: The vendor of these products charge both per contract per year (PCPY) user fees as well as initial implementation fees and annual subscription fees. The PCPY user fees are $0.115 and $1.7955 for "Member Out of Pocket" and "Way to Save" respectively. The vendor also charges a 25% administrative load, annual subscription fee, and a $100,000 implementation fee. The implementation fee is amortized over 5 years across several hundred thousand members. Using book of business member-to-contract ratios and converting to a per member per month (PMPM), in conjunction with the administrative load and implementation fee yields a PMPM charge of $0.0128 and $.20 for Member Out of Pocket and Ways to Save respectively. Annual subscription fees charged yields another $0.04 PMPM. All of these items combined allow us to arrive at a requested $0.25 PMPM. These programs are included in the URRT Worksheet 1, "Administrative Load".
4. Value-Based Benefits (VBB): Standard with each plan, Capital BlueCross includes wellness incentives to maximize the likelihood that consumers make positive behavioral changes, which lead to better health, and curbed health care costs for employers and employees alike. The incentive is as follows:
    a. Complete CBC Personal Profile and receive a gift card reward.
    b. Complete one online coaching program and receive a gift card reward.

c. The wellness program is administered through a vendor and costs are based on vendor fees.

5. Identity Theft Coverage: Identity protection offering will include the following components:
    a. Credit monitoring – Monitors activity that may affect credit
    b. Fraud detection – Identifies potentially fraudulent use of identity or credit
    c. Fraud resolution support – Assists members in addressing issues that arise in relation to credit monitoring and fraud detection

Profit (or Contribution to Surplus) & Risk Margin:

1. Contingency: Contingency is included in the URRT Worksheet 1, "Profit and Risk".

Taxes and Fees:

2. Fee for Patient-Centered Outcomes Research Trust Fund (PCOR): As per the Notice of Proposed Rulemaking for Fees on Health Insurance Policies and Self-Insured Plans for the Patient-Centered Outcomes Research Trust Fund (REG-136008-11), 77 Fed. Reg. 22691: For policy years ending on or after October 1, 2013, and before October 1, 2014, the applicable dollar amount in $2 per member per year ($0.17 PMPM), trended annually. At an estimated trend of 4%, the 2016 projected fee is $0.18 PMPM. PCOR is included in the URRT Worksheet 1, "Taxes and Fees".
3. Health Insurer Fee (HIF) – Section 9010 of PPACA and Section 1406 of the Reconciliation Act (which modified PPACA) refer to HIF. The fee is a fixed-dollar amount distributed across health insurance providers: $8 billion in 2014, $11.3 billion in 2015-2016, suspended in 2017, and $14.3 billion in 2018. After 2018, HIF rises according to an index based on net premium growth. See Exhibit H. The HIF is included in the URRT Worksheet 1, "Taxes and Fees".
4. Exchange Fee – CAAC is not offering any plans of the federally-facilitated exchange.
5. Federal Income Tax: The projected Federal Income Tax is included in the URRT Worksheet 1, "Taxes and Fees".

Additional Fee:

1. Health Reimbursement Account (HRA) Administrative Fee: Charged to HRA plans to cover the administration of bank accounts linked to these plans. Because this is a financial service offered by CAAC and not a service that is required to obtain health care, the HRA admin fee is only applied to HRA plans, and should not be spread across all plans.

See Exhibit H for all CAAC small group retention values.

Projected Loss Ratio

See Exhibit I for the projected loss ratio calculation. The projected loss ratio is calculated using the federally prescribed MLR methodology.

Single Risk Pool

The data used to develop rates and shown in the URRT abides by 45 CFR part 156.80(d) single risk pool requirements. The single risk pool reflects all covered lives for every non-grandfathered product/plan combination for CAAC in the small group market segment. The single risk pool includes transitional products/plans for purposes of base rate experience. No explicit adjustment is made for the impact of transitional policies to the projection period.

Index Rate

The experience period index rate is CAAC's allowed claims PMPM, set in accordance with the single risk pool provision. All CAAC covered benefits are categorized as Essential Health Benefits (EHBs), therefore no adjustment was made to the experience period index. Only two EHB categories are not included in the experience period: pediatric dental and pediatric vision. Pediatric dental and pediatric vision claim PMPMs are added to the projected index rate as described in the Projection Factors section above.

Projected Allowed Claims: The CAAC experience period allowed claims, benefit-adjusted, trended to the projection period (See Projection Factors section above), and credibility adjusted, is the *Projected Allowed Claims at Current Benefits.* This number is reflected in Worksheet 1 of the URRT ("Projected Allowed Experience Claims PMPM (w/ applied credibility if applicable)").

To calculate the projected index rate:

1. Start with *Projected Allowed Claims at Current Benefits*
2. The *Projected Allowed Claims at Current Benefits* reflect EHBs 100 percent, so no adjustment needs to be made to add EHBs and remove non-EHB claim cost. This is the index rate for groups renewing July – September (Index 3).
3. Index 1 and Index 2 are taken from the annual filing. Index 3 (July – September) is calculated in step 2, and Index 4 (October – December) is (Index 3) x (1+Trend ^ (3/12)).
4. The final projected index rate is the member weighted average of Index 1, Index 2, Index 3, and Index 4. Member distribution is based on CAAC's current enrollment by renewal month.

See Exhibit J for the calculation of the Index Rate.

Market Adjusted Index Rate

The Market Adjusted Index Rate is calculated as the Index Rate adjusted for all allowable market-wide modifiers defined in the market rating rules, 45 CFR Part 156.80(d)(1). So,

$$[Market\ Adjusted\ Index\ Rate] = [Index\ Rate] - [Net\ Projected\ ACA\ Reinsurace\ Recoveries] - [Net\ Projected\ Risk\ Adjustments\ PMPM] + [Exchange\ Fees\ PMPM]$$

See Exhibit K for the development of the Market Adjusted Index Rate.

Plan Adjusted Index Rate

The Plan Adjusted Index Rates are included in Worksheet 2, Section IV of the URRT.

The following adjustments were used to derive the Plan Adjusted Index Rate:

1. Actuarial Value and Cost Sharing adjustment: The Actuarial Value and Cost Sharing Adjustment is determined using CAAC's actuarial cost model. CAAC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a $0 office visit copayment and a $25 ER copayment. Given a particular benefit design (for example, $20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a claim PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on CPDs, where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.
2. Provider Network: The Provider network is the across the projection period and experience period, and across all plans, so no adjustment is necessary.
3. Adjustment for benefits in addition to EHBs: No benefits other than EHBs are included in the plans, so no adjustment is necessary.
4. Catastrophic Plans: Does not apply to the small group market.
5. Adjustment for distribution and administrative costs: Described in Non-Benefit Expenses and Profit & Risk section above.
6. Tobacco Adjustment: No tobacco factor is applied, so no adjustment is necessary.

The development of the Plan Adjusted Index rate is found in Exhibit L. The average projected Plan Adjusted Index Rate is found in Exhibit M.

Calibration

A calibration must be performed in order to apply the allowable rating factors (age and geography) to the Plan Adjusted Rate in order to calculate the Consumer Adjusted Premium Rates.

Age Curve Calibration: The projected average age factor is calculated by taking the member-weighted average of current small group enrollment by age in CAAC, CAIC, and KHPC

combined. Age factors are applied in accordance with CMS's Standard Age Curve. The average age factor is 1.524, equating to an average age of 46, according to the CMS Age Curve.

Geographic Factor Calibration: The projected average geographic factor is calculated by taking the member-weighted average of current small group enrollment by employer geographic location in CAAC, CAIC, and KHPC combined.

> **Geographic Factors:** CMS has approved nine geographical rating areas (GRA) in the state of Pennsylvania. CAAC operates in a 21-county area of Pennsylvania, encompassing three of the nine defined regions. CAAC performed regional analysis to quantify the cost difference between the three regions in our service area. The analysis gathered allowed claims in a 12-month period by region, normalized for demographics. We then compared the claim cost for each of the three regions, and calculated cost differentials between the regions, mostly due to differences in hospital contracting between regions. The data from the analysis is found in Exhibit Q.

The calibration is:

$$[Calibrated\ Plan\ Adjusted\ Index\ Rate] = [Plan\ Adjusted\ Index\ Rate] \div ([Age\ Curve\ Calibration] \times [Geographic\ Factor\ Calibration])$$

All consumer-level adjustments are applied uniformly to all plans in the Single Risk Pool. These adjustments do not vary by plan. The calibration factors and development are found on Exhibit N and Exhibit O.

Consumer Adjusted Premium Rate Development

The Consumer Adjusted Premium Rate is developed as follows:

1. Member-Level Consumer Adjusted Premium Rate:

$$[Member - Level\ Consumer\ Adjusted\ Premium\ Rate] = [Calibrated\ Plan\ Adjusted\ Index\ Rate] \times [Age\ Factor] \times [Geographic\ Factor]$$

2. $[Family\ Consumer\ Adjusted\ Premium\ Rate] = \sum[Member - Level\ Consumer\ Adjusted\ Premium\ Rate]$
   With no more than three child dependents under age 21 taken into account

Small Group Plan Premium Rates: CAAC is filing quarterly small group rates with trend. Therefore, the Index Rate, Market Adjusted Index Rate, and Plan Adjusted Index Rate reflect the member-weighted average premium of the calendar year. The trend used to develop the quarterly rates is shown in Exhibit M.

Quarterly Base Rates, i.e. Calibrated Plan Adjusted Index Rates, are found on Exhibit P.

AV Metal Values

AV Metal Values included in Worksheet 2 of the URRT were based on the federally issued AV Calculator.

AV Pricing Values

All AV Pricing values were developed using CAAC's actuarial cost model and actuarial judgment described in section Paid to Allowed above. Differences in health status are not included.

Membership Projection

The membership projections found in Worksheet 2 of the URRT were developed by assuming that a percentage of current small group members will purchases coverage through CAAC. This is consistent with current enrollment, and reflects new 2017 plan offerings in CBC-subsidiaries. The projection also considers transitional policies mapping to single-risk-pool plans.

Terminated Products

See Exhibit R for a list of terminated products.

Attachments and Examples

The following is a list of Exhibits and Data to support this filing:

Exhibit A – Benefit Summary
Exhibit A1 – Benefit Change Summary

Actuarial Statement

I, [redacted], ASA, MAAA, am of the opinion that this filing is in compliance with the applicable Federal and State Laws and Regulations concerning the Patient Protection and Affordable Care Act and the Health Care and Education Reconciliation Act of 2010.

I, [redacted], ASA, MAAA, do hereby certify that:

1. This filing has been prepared in accordance with the following:
    a. Actuarial Standard of Practice No. 5, "Health and Disability Claims"
    b. Actuarial Standard of Practice No. 8, "Regulatory Filings for Rates and Financial Projections for Health Plans"
    c. Actuarial Standard of Practice No. 12, "Risk Classification"
    d. Actuarial Standard of Practice No. 23, "Data Quality"
    e. Actuarial Standard of Practice No. 25, "Credibility Procedures Applicable to Accident and Health, Group Term Life, and Property/Casualty Coverage"
    f. Actuarial Standard of Practice No. 26, "Compliance with Statutory and Regulatory Requirements for the Actuarial Certification of Small Employer Health Benefit Plans"
    g. Actuarial Standard of Practice No. 41, "Actuarial Communications".

2. The index rate is:
    a. Projected in compliance with all applicable state and federal statutes and regulations (45 CFR 156.80(d) (1)).
    b. Developed in compliance with the applicable Actuarial Standards of Practice.
    c. Reasonable in relation to the benefits provided and the population anticipated to be covered.
    d. Neither excessive nor deficient.
    e. Adjusted by only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) to generate plan level rates.

3. The percent of total premium that represents essential health benefits included in Worksheet 2, Sections III and IV were calculated in accordance with actuarial standards of practice.

4. The AV Calculator was used to determine the AV Metal Values shown in Worksheet 2 of the Part I Unified Rate Review Template for all plans, and in accordance with CFR 156.135(b)(2) as necessary. For any plan requiring an alternative method, the development of the actuarial value is based on one of the acceptable alternative methods outlined in 156.135(b)(2) or 156.135(b)(3) for benefits that deviate substantially from the parameters of the AVC and have a material impact on the actuarial value.

a. The analysis was
    i. conducted by a member of the American Academy of Actuaries, and
    ii. performed in accordance with generally accepted actuarial principles and methods.

5. All factor, benefit and other changes from the prior approved filing have been disclosed in the actuarial memorandum.

6. New plans cannot be considered modifications of existing plans under the uniform modification standards in 45 CFR 147.106.

7. The information presented in the PA Actuarial Memorandum and PA Actuarial Memorandum Rate Exhibits is consistent with the information presented in the 2017 Rate Filing Justification.

Question and Answer
Small Group Rates
Effective January 1, 2018

With this response, please find corresponding Q&A Exhibits in "SG_17-37_Initial_CAAC_PPO_Q&AExhibits_Supporting_20170626.xlsm"

Question 1. As we discussed, please revise the PA AM and all supporting documents as well as the SERFF Rate/Rule Schedule tab to show the average and range of rate increase from Table 10 as directed in the 2018 Guidance.

Answer 1. I have updated the PA AM, all supporting documents, and SERFF to use Table 10.

Question 2. The cover letter indicates off exchange while other documents show on/off exchange. Please review and revise for consistency.

Answer 2. I have updated all documents to show off exchange only.

Question 3. The cover letter indicates PPO as the only product in this filing. However, the URRT and other documents also show the offering of an EPO. Please review and revise.

Answer 3. I have updated the cover letter to show PPO and EPO offerings.

Question 4. Please review the mapping directions on pages 12 – 13 of the 2018 Rate Guidance and update Table 10 columns AG – AO, as necessary. When revising, please remain cognizant that the total covered lives in cell V15 of Table 10 must equal Table 1 cell D18. If the mapping is correct, please explain why Table 10 cell V15 is not equivalent to Table 1 Cell D18.

Answer 4. I have updated Table 10 with two revisions:

- Transitional policies: The transitional policies are marked as "DNM" because these remaining members are mapped by transitional plan design, so mapping varies. In order to stay consistent with the URRT, the rate increase in Table 10 is ACA-compliant plan to ACA-compliant plan. Also, because these members are not mapped on Table 10, cell V15 does not match Table 1. But Table 10, cell AP15 does match Table 1.
- Include 2016 plans discontinued in 2017, but still have membership as of 2/1/17.

Question 5. Regarding the number of covered lives, the Rate/Rule Schedule tab indicates 43,716, the Rate Change Summary Request shows 76,192 and Table 10 indicates 70,476. Please reconcile or explain. Be advised that the 2018 Guidance, consistent with the 2017 guidance,

states that the policy holders in the Rate/Rule Schedule tab should show data for the number of covered lives. Please review and revise for consistency.

Answer 5. The Rate/Rule Schedule tab previously used subscribers as policyholders. As requested, this has been updated to reflect covered lives and matches Table 1.

Question 6. Please update the cover letter to include the correct reference to the corresponding binder.

Answer 6. I have updated the cover letter to include the correct corresponding binder number.

Question 7. Worksheet II cell G29 projected product increase indicates 11.65% rate increase for the renewing PPO products while Tables 11 shows 13.9%. Please reconcile.

Answer 7. I have updated Worksheet II with a correction to the annual increase, but it now shows 11.98%. For the small group market, Worksheet II projected product increase will not match Table 11. This is because Table 11 measures January 2018 over January 2017 rate increase, while the URRT measures member-weighted average by renewal quarter 2018 over 2017. Because CAAC filed a rate increase Q3 2017 and Q4 2017, the average 2018 over 2017 rate change is less than the January 2018 over January 2017 rate change.

Question 8. Does data in Tables 2 and 4 include transitional business? If so, please provide total claims amount, the total premium and the number of transitional members.

Answer 8. Tables 2 and 4 do include transitional business. Please see Q&A Exhibit 1 for the requested data.

Question 9. Please provide the quantitative development of the trend factors shown in Exhibit E for Cost and Utilization.

Answer 9. Pricing trend data is found in Q&A Exhibit 2. Trend is calculated using:

- Vendor Physician Cost Model
- Internal Hospital Contracting Model
- Internal Prescription Drug Trend Model
- Medical utilization estimates reviewed by CBC's Chief Medical Officer

The medical cost models use best estimates of Capital BlueCross (CBC)'s future contracting increases with physicians and hospitals. The models use cost estimates based on varying contract effective dates by physician and hospital. All facilities and providers are considered in this modeling effort (i.e. acute and non-acute, network and non-network, inpatient and outpatient, in- area and out-of-area). From there, a monthly anticipated cost (assuming static utilization) summary is produced which can be used in projecting future claims costs. Cost trends are determined at the CBC book of business level for all commercial business.

Contracting increases are adjusted for the following factors:

- Intensity: Intensity is defined as the amount of inputs used to provide each unit of service. This is the measure of additional trend for technological changes, moving from less to more expensive treatments (i.e. shift from x-rays to MRIs or more expensive pharmaceutical drug treatments).
- Leveraging: The trend model is based on allowed cost increases. Paid claims trend at a higher rate than allowed due to leveraging. Leveraging is the impact of static cost-share, such as deductibles, to the paid trend. Leveraging can be seen in historical trend reports as described below and see in Exhibit 2a (difference between incurred and allowed trends).

Utilization trend also takes into account the historical data. Please refer to Q&A Exhibit 2a for CAAC small group trend summary.

The Prescription Drug model considers the following trend components:

- Price Inflation
- Contract Pricing
- Member Cost-Sharing
- Units per Script
- Brand/Generic Mix
- Therapeutic Mix
- Cost per Script
- Utilization

Question 10. Please explain why there is no induced utilization factor included in the utilization trend while there is one included in the individual filing.

Answer 10. Induced utilization is CBC's best estimate for increased utilization in the individual market due to unknown future regulatory changes. CBC predicts that consumers will use more services in 2018 due to unknown coverage status in 2019. CBC does not expect this same behavior in the small group market, as small employers are likely to continue to offer similar coverage even with regulatory changes.

Question 11. Please provide the development and explain the purpose of the 1.289 factor shown in the other projection factor in the URRT for "Other Medical" in Exhibit F.

Answer 11. 1.289 factor in "Other Medical" is to adjust the base data to include pediatric dental and vision claims. Due to data constraints, the pediatric dental and vision claims are not included in the base data. Pediatric dental and vision is underwritten by CAAC, but embedded with medical/Rx products underwritten by CAAC, CAIC, and KHPC. Because of this, data is difficult to allocate to each company. I hope to be able to provide this data split by company in the near future. But for this filing the rate development is performed as follows:

- Pediatric Dental: The pediatric dental calculation is taken directly from CAAC Stand-Alone Dental Filing CABC-130539624. The per-child-per month rate from the filing is

converted to a PMPM in an embedded plan, since every member pays, but only children receive the benefit.

- Pediatric Vision: Rating begins with starting cost and utilization by procedure code. Separate in-network and out-of-network cost and utilization are used in the rating methodology. Starting cost and utilization are then adjusted based on the selected plan designs. Utilization is adjusted based on the chosen benefit period (12 months), copay, and the maximum allowance levels. Starting cost is adjusted based on copays, coinsurance, and maximums. Final cost per service is calculated as the minimum of the max for that service category and the starting cost, minus the copay, and multiplied by the coinsurance. The per-child-per-month rate is converted to a PMPM in an embedded plan, since every member pays, but only children receive the benefit.
- Please note that this factor is an estimate of allowed claims. Incurred claims are estimated separately as described in the above bullets. The "Other Medical" factor in the URRT only impacts the allowed calculation, which ultimately impacts the paid-to-allowed ratio. Premiums are not impacted.

Question 12. Page 12 of the PA Am indicates that the impact of transitional policies is discussed in the Projection Factor section. The Department could not locate this discussion. Please revise the AM to discuss.

Answer 12. I have updated the PA AM, page 12 to indicate that no explicit adjustment is made for the impact of transitional policies.

Question 13. Please explain why there is no adjustment for the distribution of transitional policies when projecting the paid claims in Exhibit G, as page 12 of the Actuarial Memorandum states transitional policies are part of the single risk pool experience.

Answer 13. The impact of transitional policies differs significantly from the individual to the small group market. Transitional small group members do not have significantly different experience than ACA (net risk adjustment). This is because both transitional and ACA members have typically been covered by health insurance. Coverage gaps in the individual market are a significant driver to increased utilization (pent-up demand) and cost (conditions worsening from lack of treatment over uninsured period). Coverage gaps are more likely to occur with individual ACA members than small group ACA members. New small employers did not enter the market after the ACA, instead, the small group population has remained fairly stable. So while small group transitional members may be slightly healthier than small group ACA members, risk adjustment should account for these differences, and small group ACA members do not have the same cost drivers such as pent-up demand and worsening conditions due to being uninsured. Given these factors, I did not make an explicit adjustment for transitional members.

Question 14. Please provide an explanation for the development of the plan Final PMPM amounts on the "PMPM" tab including the development of the "Adjustment Ded Sloping" factor. Specifically, please provide an explanation for the "Adjustment Ded Sloping" factor is not consistent for plans with the same deductible and why it does not always move in the opposite direction of the deductible change (i.e., the Gold PPO 0/0/25 has a $500 deductible and a 1.01 factor while the Gold PPO 1000/0/25 has a higher deductible of $1,000 and also a higher factor of 1.05).

Answer 14. The amounts in the PMPM column of the PMPM tab are from CAAC's actuarial cost model. CAAC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a $0 office visit copayment and a $25 ER copayment. Given a particular benefit design (for example, $20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on cumulative probability distributions (CPDs), where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.

The Final PMPMs are adjusted for two reasons:

- Market/Competition: Adjustments were made in order to create premium relativities similar to 2017. Competitors have wider pricing relativities than CBC's actuarial cost model would indicate. Because of competitive pressure in the small group market, CBC has widened the deductible pricing slope to give less credit for low deductibles and more credit for higher deductibles. Please also note that CBC applies admin on a PMPM basis instead of as a flat percent of premium. This drive up the cost of low-cost, high-deductible plans as a flat percent of premium would drive up costs of high-premium, low deductible plans and drive down the cost of low-premium, high-deductible plans. So adjustments to manual cost mitigate that impact.
- AV Calculator: The AV calculator was also referenced when making adjustments to plans. If CBC's actuarial cost model produces a 20% difference between a platinum and gold plan, adjustments were made to bring the relativity closer to 10%-14%.

The adjustment to the Gold PPO 1000 plan looks to be inconsistent with other adjustments. But in this case, the manual cost model shows a 17% difference between the Gold PPO 1000 and Platinum PPO 0. The adjustment was made to get closer to AV relativities.

Question 15. Please elaborate on the comment "Shared Deductible Priced like Gold 1000 plan" shown in the "PMPM" tab and why that plan does not use the same Medical PMPM build up method as the other plans.

Answer 15. The shared deductible plan is a $5,000 deductible plan where CAAC pays the first $500 of deductible. CBC's actuarial cost model does not properly adjust for the first $500 in full deductible coverage. But the CMS AV model does calculate AV including HRA funds, which is very similar to a shared deductible plan. Because the shared deductible plan has a similar AV to the Gold PPO 1000 plan, I used that plan as a gauge for pricing.

Question 16. Please explain the development of the Benefit Mix Adjustment shown in Exhibit D. Specifically, please provide the source for the Medical PMPM of $318.24 and the Rx PMPM

of $68.16. Additionally, please explain why it would be reasonable to assume the manual claim amounts PMPM would not change between the experience and rating periods.

Answer 16. CAAC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a $0 office visit copayment and a $25 ER copayment. Given a particular benefit design (for example, $20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on cumulative probability distributions (CPDs), where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments. This actuarial cost model derives a Manual Cost for each benefit design in the experience period. The member-month weighted average of the Manual Cost PMPMs equals "Average Manual Claim PMPM in Experience Period".

It is reasonable to assume that the benefit mix between the experience period and the projection period is the same because the small group population is fairly stable. Employers prefer to offer consistent benefits to their employees each year. Buy-downs (movement to higher deductibles) have slowed in recent years.

Question 17. Please answer the following questions about the development of the risk adjustment transfer amount shown in Exhibit K:

a. How was the statewide premium increase of 12% per year determined?
b. Please provide justification for using the statewide average premium in calculating the risk adjustment percentage instead of Capital's own average premium.
c. How are you accounting for the 2018 risk adjustment calculation change to remove the impact of administrative expenses? In other words, where is the adjustment to reduce the statewide average premium by 14%?
d. Please explain and provide the development for the 2.0% adjustment for transitional movement to ACA.
e. Please explain and provide the development for the 2.0% adjustment for market improvement in coding.

Answer 17.

a. The 12% average annual premium increase, is intended to represent anticipated increases due to allowance trend of roughly 5% - 8%, leveraging of roughly 3% - 5%, and the impact of continued migration of transitional policies into the ACA market. Since the aggregate 12% is truly an unknown, as it is impacted by things outside of CBC control, the estimate delivered was reviewed for reasonability and was deemed appropriate.
b. Since the statewide average premiums are normalized for AV of the state, then carrier specific AV applied back to get to an AV adjusted carrier premium, there is a need for an estimate of both the statewide AV as well as the carrier specific AV. Speculating that the state AV and the carrier AV are markedly different requires knowledge that we don't

currently possess since history is limited. Since at the time of filing 2016 was still unknown, speculating what will occur in 2016, 2017 and ultimately 2018 requires simplifying assumptions. One of those simplifying assumptions is that the statewide AV, GCF and other complex components of the RA payment transfer formula are identical and remain unchanged.

c. Similar to b) above, there is so much uncertainty in anticipating 2016 RA payment transfers as of the time of filing, exacerbating the difficulty in estimating 2018. While it is reasonable to think that the 14% administrative expense reduction mentioned in statutory guidance will have an impact, all of the moving parts of the RA payment transfer formula along with market and regulatory dynamics make speculation of impact a challenge for industry actuaries. Ultimately, after all of the assumptions are applied to the formula, total net impact was seen to be within a reasonable level of expectation, so the 14% AE was implicit and not explicitly stated.
d. Prior to 2014 payers had initiated a marketing initiative to aid small groups in attaining the lowest rates possible. Ultimately, healthy groups were marketed transitional policies and less healthy groups were marketed ACA policies (since healthy groups would be favorably impacted by disallowing of risk in premium rating). As transitional policies migrate to ACA, the overall health status of the CBC's ACA population will improve, driving up CBC's payment transfer. The amount is ultimately unknown, but it is estimated that it will certainly have an unfavorable impact. 2% was reviewed for reasonability and was deemed appropriate.
e. Internal coding represents the fact that CBC's ACA book of business has had a churn rate that makes a multi-year perspective of member diagnosis and risk very challenging. The churn rate for SG business is upwards of 30%. Since risk adjustment, closing gaps in care and coding, and a myriad of other risk adjustment functions require more than a single year of data to facilitate an accurate depiction of risk, it is believe that CBC is disadvantaged in the market. The amount is ultimately unknown, but it is estimated that it will have an unfavorable impact. 2% was reviewed for reasonability and was deemed appropriate.

Question 18. Please indicate if the pricing AVs shown in Exhibit L, rows 34 and 35, include induced demand.

a. If induced utilization is included, please provide the induced utilization amount for each plan as well as an explanation about how the amount was determined.
b. If induced utilization is not included, please provide an explanation for where in the rate calculation it is included and an explanation about how the amount was determined.
c. Additionally, please explain why only the two platinum plans have induced utilization adjustments in row 38 but all other plans show 1.0.

Answer 18.

a. Induced utilization is not included in Exhibit L rows 34 and 35.
b. For the small group market, induced utilization is only added to platinum plans, as other metal levels do drive over-utilization like is seen in the individual market.
c. Please see answer b. above.

Question 19. Please provide an explanation for the significant difference in the Metal AVs in Exhibit A1 and the pricing AVs in Exhibit L.

Answer 19. There are several reasons why plan premiums may not be proportional to AV Pricing Values.

- CAAC does not use the AV Calculator as a pricing model
    - The AV Calculator is a nationwide model designed to provide a consistent and explainable process for determining benefits. It is not designed to be a region-specific pricing model
    - CAAC uses a vendor pricing model calibrated to Capital BlueCross (CBC) data. The actuarial model is explained in the Actuarial Memorandum under the Plan Adjusted Index Rate section.
- Market/Competitive Forces: Please see answer 14 above.

Question 20. On page 14 of the 2018 Guidance, the department requested data regarding the development of the Pricing Avs and Induced Demand in Table 10. The Department could not locate this exhibit. Please provide this exhibit in Excel.

Answer 20. Please see Q&A Exhibit 3 for the data requested.

Question 21. In Table 13, you have proposed changes to your geographic factors for rating areas 7 and 9. Please provide analysis of the data in exhibit Q in your supporting Excel exhibits. Explain and show the development of columns C, E, F, G and J in this exhibit. Additionally:

a. Please provide an explanation for what "Demo Units" represent and how they are calculated.
b. Please provide an explanation for how the impact of morbidity differences between regions was removed when developing the geographic factors.
c. Please provide information on the development of the Contracted Increase values; specifically the wide variance of the factors even within a region.
d. Please provide additional explanation around the magnitude and direction of the geographic factor changes as compared with the 2017 factors.

Answer 21. CMS has approved nine geographical rating areas (GRA) in the state of Pennsylvania. CAAC operates in a 21-county area of Pennsylvania, encompassing three of the nine defined regions. CAAC performed regional analysis to quantify the cost difference between the three regions in our service area. The analysis gathered allowed claims for the 2016 calendar year by region, normalized for demographics/risk. Demographics were normalized by gathering demo-units for the CY 2016. Demo-units are Milliman Health Cost Guidelines demographic factors x member-months. So demo-units divided by member-months is the average demographic factor in this population. The 2016 experience was adjusted for future contracting changes in order to project results to 2018. We then compared the claim cost for each of the three regions, and calculated cost differentials between the regions, mostly due to differences in hospital contracting between regions.

a) Demo-units are Milliman Health Cost Guidelines demographic factors x member-months. So demo-units divided by member-months is the average demographic factor in this population.
b) In credible populations, normalizing for demographics is synonymous with normalizing for risk/morbidity. The claim PMPMS by county are normalized for demographics.
c) The contracted increases come from CBC's provider contracting area. Provider contacting provides actuarial with contracted hospital and physician increases in 2017 and 2018. These increases are used to adjust claims by county from the 2016 base experience period to the 2018 projection period. The calculation is found in Q&A Exhibits 4a-4c.
    a. Exhibit 4a: Summary of increases two-year contracted increases by hospital, also summarized by county.
        i. Note that Hershey hospital contracted increase of 18% was mitigated to 10% in order mitigate further adverse impact to region 9. Hershey handles severe cases and patients come from all regions to be treated, so the cost is distributed across all regions.
    b. Exhibit 4b: Provider contracting IP hospital contracting increases by month
    c. Exhibit 4c: Provider contracting OP hospital contracting increases by month
    d. For this exercise, professional contracting increases were assumed to be the same across all providers/counties.
d) CBC has seen a change in the experience attributed to region 9 as well as future contracted increases in relation to region 6 and 7. Pinnacle accounts for a large portion of region 9 claims and their 2-year contracted increase of 21% is significant in comparison to the average.

Question 22. Please provide an explanation for how the effective copay's were developed for use in the AV Calculator and why that method is appropriate.

Answer 22. The Rx effective copays are developed as follows:

- Generic: CBC has a 2-tier generic copay structure – generic preferred and generic non-preferred. It is estimated that 50% of generic drugs fall into each category.
- All tiers: Copays are blended to reflect retail and mail copays. Mail copays are divided by 3 because 1 mail prescription is typically equal to 3 retail prescriptions. It is estimated that Rx prescriptions are 90% retail and 10% mail order.

Please see Q&A Exhibit 5 for an example calculation.

Question 23. In Table 6, the sum of the administrative expenses in cells C50 – C52 does not equal cell C49. Please review and revise.

Answer 23. I have updated Table 6 so the sum of C50-C52 equal C49.

Question 24. Table 6, cell B54, indicates the PCORI fee is $0.18. The 2018 PCORI pmpm amount should be $0.20. Please revise. Also review the percent of premium in cell C54 to ensure the yielding amount is consistent with $0.20.

Answer 24. I have updated PCORI fee to $0.20 and revised the percent of premium in Table 6.

Question 25. Table 6 cell C63 indicates the Single Risk Pool pmpm is $677.16, while the Single risk pool in the URRT in cell V43 indicates $651.49. Please reconcile.

Answer 25. For the small group market, Table 6 Single Risk Pool PMPM will not match URRT cell V43. This is because Table 6 uses a quarterly trended amount, while the URRT uses Q1 amount.

Question 26. Please show the development of the Health Insurance Industry Fee of 3.8% as shown in Table 6 cell C57.

Answer 26. CBC's finance department estimated our 2016 HIF fee to be 3.62%. The HIF assessment has risen from $11.3 billion in 2016 to $14.3 billion in 2018 (25% increase). If premiums, on average, have risen 20% in 2 years, the assessment needs to increase 5%. CBC trended the 3.62% at 4% over two years to arrive at 3.78%. The same 2018 HIF percentage is applied in rate development across all market segments.

But for the small group market only, for groups renewing starting in Q2 2018, a portion of their HIF assessment will be at the 2019 level. For this reason, the assessment is trended at 3% in 2019 and the final 2018 filing assessment is the member-weighted average by renewal quarter.

Question 27. Show development of the federal income tax in cell C56 of Table 6.

Answer 27. The federal income tax is estimated to be 35 percent of the 2 percent risk/contingency, or 35% x 2% = 0.7%.

Question 28. Page 4 of the PA AM indicates the projected pediatric dental is $5.01 while Exhibit G shows $3.61. Please explain.

Answer 28. The difference between the PA AM projected amount and Exhibit G is $5.01 is the projected allowed amount and $3.61 is the projected incurred amount.

Question 29. Provide support for all expenses that do not reflect payments made to providers under the contract for covered medical services. Describe the methodology used for developing the estimate of these non-benefit expenses expected during the projection period for the applicable market, including any allocation of corporate overhead. The Department notes that the administrative expense pmpm proposed in this filing is $68.05 compared to $64.17 in the approved 2017 filing. Please justify this 6% proposed increase.

Answer 29. Administrative Expense is calculated using an allocation method from CBC's finance department, and trended to the rating period. Costs are allocated according to results reported through a company-wide questionnaire. On an annual basis, each cost center within the company completes a questionnaire listing the distribution of costs (in percentage terms) by product as well as by market segment. For example, the questionnaire will ask for the

percentage of time spent on PPO versus HMO versus Drug versus Medicare. And separately will ask for the percentage of time spent on large group, small group, individual, and government programs. Using those distributions, all costs needed to perform the business are allocated to the proper market segments and lines of business. The administrative expense applied in the rate development is the total expense allocated to CAAC small group products. This includes administrative fee incurred to administer Rx rebates.

The total administrative expense (including broker commissions and quality improvement) is $59.89 PMPM. The approved 2017 total administrative expense is $59.62.

Question 30. Modify PA AM to include the average age factor. Also include the associated age according to the CMS default curve. Please note Table 1 should show the SRP true average age unlike the age associated with the average age factor.

Answer 30. I have updated the PA AM, Calibration section, to include the average age factor and the associated average age according to the CMS age curve.

Question 31. Please show the development of the average commission and circumstances in which broker commissions will be paid and if they will vary based on geographic location, metal level, plan, open enrollment vs SEP enrollment, etc. Additionally, the current and 2018 broker agreements should be included and used to develop the percent shown in Table 6 as well as the associated pmpm.

Answer 31. Brokers are paid the same commission rate for all geographic locations, enrollment dates, and metal levels. The broker commission applied in rating is taken directly from CBC's Finance Department's line of business report for small group YTD 2017. The 2018 broker commission schedule is yet to be finalized. Attached please find the 1/1/2017 copy of the broker agreement – redacted version. Files are as follows:

a. Redacted Agent Agreement: "SG_17-37_Initial_CAAC_PPO_BrokerRedacted_Supporting_20170626.pdf"
b. Redacted Preferred Producer Master Agreement: "SG_17-37_Initial_CAAC_PPO_PPMABrokerRedacted_Supporting_20170626.pdf"

If you have any further questions regarding this filing, please call me at [redacted] (or via email at [redacted]. Thank you for your assistance in this matter.

Sincerely,

[redacted]

Question and Answer
Small Group Rates
Effective January 1, 2018

With this response, please find corresponding Q&A Exhibits in "SG_17-37_Initial_CAAC_PPO_Q&AExhibits2_Supporting_20170714.xlsm"

Question 1. In response to Answer 9, please provide quantitative support for the leveraging assumption of 1.1% annually considering the projected small change in the average paid-to-allowed ratio from 2016 to 2018.

Answer 1. Please see Q&A Exhibit 1 for small group total trend data used to estimate adjustments to trend. 2017 over 2016 allowed trend is 8.4% and incurred trend is 7.9% - a difference of 0.5%. 1.1% is only applied to medical trend – making the aggregate leveraging adjustment 0.011 x 0.8 (in general, 80% of cost is medical) = 0.9%. We can assume that benefits play a role in reducing the difference between allowed and incurred trend (incurred trends include benefit buy-downs while allowed trend does a better job of netting out those differences). It is reasonable to assume that benefits could be netted out of the incurred trend to make up the additional 0.4% needed to support leveraging of 0.9% (aggregate medical + Rx).

Please note that the difference in paid-to-allowed ratio between 2016 and 2018 is accounted for separately (outside of trend) in rate development. Differences in benefits between the BEP and projection period are handled in the Exhibit D (Benefit Mix). This calculation measures the average manual cost in the BEP and the projected manual cost in the projection period and adjusts claim projections accordingly.

Question 2. Please reconcile the 1.289 "Other Medical" factor described in Answer 11 to the Exhibit C information, which lists the paid claims for pediatric dental and vision to be a combined $4.08.

Answer 2. The other medical factor is applied to the URRT to estimate the allowed pediatric dental and vision amounts. Q&A Exhibit 2 shows the impact of the Other Medical factor. Please note that this factor has no impact on the final rates – it is only an estimate of allowed. Incurred claims used in rating are developed separately.

Please also note with this submission, I have corrected an error made on the pediatric dental and vision projected incurred claims PMPM. The pediatric dental incurred claim PMPM now matches the 2018 CAAC stand-alone pediatric dental filing CABC-131022099. And the pediatric vision projected incurred claims PMPM is updated to correctly adjust for the current distribution of members under age 19. Both calculations are also included in Q&A Exhibit 2.

Question 3. Please answer the following questions about risk adjustment and the responses to Question 17:

a) The 0.860 statewide average premium adjustment is intended to remove administrative costs from the statewide average premium utilized in the risk adjustment transfer calculation. This factor should be included in the calculation as a multiplication to the statewide premium amount as outlined in the 2018 Notice of Benefit and Payment Parameters. Please update your calculation to include this adjustment.
b) Please provide more explanation for the 2.0% adjustment that accounts for "Transitional Movement to ACA." How was it determined that the movement of transitional policies would impact CBC more adversely than the market in total?
c) Please provide more explanation for the 2.0% adjustment that accounts for "Adjustment for Market Improvement in Coding." How was it determined that the churn of small group business would impact CBC more adversely than the market in total?
d) If you wish to make adjustments to the projected RA amount included in this rate submission and the URRT, based on the June 30, 2017 Summary Report on Transitional Reinsurance Payments and Permanent Risk Adjustment Transfers, please do so. Provide narrative and an Excel spreadsheet demonstrating the development and assumptions.

Answer 3.

a) The 0.86 adjustment is now explicitly reflected in the RA projection calculation in Exhibit K. Please note, as explained in the first Q&A Answer 14, the application of 0.86 was implicit to the original calculation as there are numerous moving parts to projecting RA. The projected 2018 statewide average premium is the same as the original submission. In order to explicitly account for the 14% reduction, I made a change to the 2-year expected rate increase. Competitive intelligence shows that small group competitor rates rose about 25% 2017 over 2016. The total 2-year increase assumes premiums will rise 17% 2018 over 2016. The 2-year increase is similar to what is expected in the individual market. A few factors were considered when estimating the increase –
    a. The small group product portfolio does not experience the same decreased benefit structure as what is seen in the individual market. In 2017, most carriers stopped offering Platinum plans in the individual market. And each year, cost-share increases within the metal levels. Also, the change in AV range in 2018 from -2%/+2% to -4%/+2% has an impact on the individual market as carriers do not want to have the richest benefits available in that market in order to protect themselves from adverse selection. This change does not have the same impact on the small group market, as carriers generally offer plans based on sales feedback and are not eager to change group benefits.
    b. Buy-downs are also not as significant in the small group market, as most groups continue to purchase plans in the Gold metal level range.

b) Please see Q&A Exhibit 3 for data to support the 2% adjustment for transitional policies. The rationale is as follows:
    a. CBC continues to move small group transitional groups into the PPACA pool throughout 2016.
    b. Transitional groups have a significantly lower risk score than PPACA groups.

c. While 2016 data partially reflects the impact of transitional policies to RA, the full impact is not yet realized. Transitional groups moved risk pools throughout 2016, so many groups did not reside in the PPACA pool for 12 months. In 2018, we would expect each of these groups to have a full 12 months in the PPACA pool, increasing their impact to RA.
d. Market intelligence has shown that CBC is moving transitional groups to PPACA at a faster rate than competitors, adversely impacting our RA results. CBC has learned that competitors are actively moving low risk groups to small group ASO products, keeping these groups out of the RA risk pool.
e. Q&A Exhibit 3 shows 2016 small group PPACA and transitional member months and HHS risk score by number of months in PPACA pool.
    i. You can see that transitional groups have a significantly lower risk score than PPACA (1.1 versus 1.59).
    ii. Risk score also grows over time – members with 1 month of data show a risk score approximately 21% lower than members with 12 months of data.
    iii. If we take every PPACA and transitional group and adjust their member months to reflect 12 months in the PPACA pool and adjust the risk score for maturity, the total 2016 risk score changes from 1.49 to 1.43, which is a difference of 4%. 2% was an estimate applied in rating, but we could justify up to 4%.

c) As discussed in our previous response on market improvement in coding, Capital BlueCross is a small plan with limited resources. The industry has commercially available services to improve coding efforts through exhaustive use of data and provider outreach programs. While CBC is engaged in the efforts of accurate, timely submission of RA data, we feel that the industry will outpace CBC in its ability to maximize value. This dynamic is readily apparent by looking at a summary of PA issuers RA payment transfer over time. Not only are large plans able to apply greater resource intensity to the coding gap closure efforts, they are also able to invest in greater analysis through the use of consulting firms like Wakely and Milliman. Note in Q&A Exhibit 4, for all three years of 2014, 2015 and 2016 that Independence BlueCross was not only in the minority of plans receiving payment transfer in the Small Group and Individual market, but the magnitude of receipt far outpaced other plans. This is due to resource intensity dedicated to gap closure efforts as well as years of history performing the same function in the Medicare Advantage space, which has many similarities to the Commercial market.
d) CBC will not make changes to its projected RA amount based on the June 30, 2017 report.

Question 4. The following questions are in response to Answer 21:
a) Please provide an explanation for how the impact of large claims was removed in the development of the geographic factors.
b) Please provide an explanation for how the allowed amounts in Exhibit Q ($290 million), which represent calendar year 2016 data based on your response, compare to the allowed amount in Table 2 ($361 million), which also represent calendar year 2016 data.

Answer 4.

a) Large claims were not removed from the analysis. For this analysis, a credible population was used to compare results across regions (see answer b) below). CBC does not expect large claims to distort cost differences when compiling data at the regional level. Additionally, as was explained in the June Q&A, the analysis tempered the impact of Hershey Medical Center, so not to skew region 9 results, since Hershey is a unique treatment facility that handles high-cost, complicated procedures for patients who reside in all counties. Additionally, large claims drive cost differences between providers, so CBC deemed it appropriate to keep large claims in the analysis.

b) The regional analysis was preformed using CBC's Small Group and MidMarket data. MidMarket is defined as groups with less than 100 employees. The combined market data in Exhibit Q is medical only, while Table 2 is medical and Rx small group data. The combined market data was used to gain credibility at the regional level. Also, these market segments do not experience the same volatility as the individual market, further adding credibility. The factors derived from the calculation are used in all filings in both market segments.

Question 5. Answer 20 indicates Q&A Exhibit 3 provides the buildup of the pricing AVs and induced demand factors for Table 10. The provided exhibit simply includes hard coded numbers; please provide the quantitative development of these factors. Additionally, please reconcile the Induced Demand factors shown in Exhibit 3 with the factors shown in Table 10.

Answer 5. Please see Q&A Exhibit 5 for support for the induced demand factors. While induced demand drives very different results than pricing AV would indicate, CBC has not implemented the entire amounts. This exhibit shows 2016 small group risk-adjusted/age-adjusted paid PMPMs by metal level. It is clear that Platinum plans drive the cost, and results indicate an induced demand factor of 1.23 (cell R9). CBC is not implementing the full induced demand amount because the market would not accept a premium spread of that magnitude between Gold and Silver. If CBC would price Gold plans an additional 23% below Gold, all Platinum members would move to Gold, driving Gold induced demand results the following year. So instead of implementing the full amount, CBC is implementing a more reasonable premium slope which partially accounts for the differences in induced demand.

The induced demand factors in Q&A Exhibit 3 sent in June are the inverse of the induced demand factors on Table 10. They are applied correctly in the formula.

The AV and Cost-Sharing Adjustment factors are developed using plan specific manual cost amounts from CBC's actuarial cost model. This is discussed in more detail in the Paid to Allowed Ratio section of the actuarial memo.

Question 6. Please reconcile the retention values and explain the differences for the information shown in the URRT WS1, Table 6, and Exhibit H.

Answer 6. The retention values in Table 6 and the URRT WS1 match. Exhibit H is slightly different from Table 6 and URRT because Exhibit H used a projected member-weighted average while Table 6 uses current member-weighted average.

Question 7. Answer 26 indicates that the HIF assessment needs to increase 5% from 2016 to 2018. However, a 4% annual trend (8.16% in total) is applied. Please explain this discrepancy.

Answer 7. The 4 percent trend referenced in June's Q&A is total over 2 year, not annual. 3.62% x 1.05 = 3.8%, slightly higher than 3.78% used in rate development. 3.78% was an estimate based on premium increases across multiple markets and the 25% increase in HIF assessment between 2016 and 2018.

Question 8. Please provide an itemized build-up of the 5.2% rate change. This will likely include items such as trend, morbidity, and benefit changes.

Answer 8. The itemized build-up of the rate change is found on PA Rate Exhibits Table 8.

Question 9. In response to question 31, you have provide only the redacted 2017 commission schedule. Please provide unredated agreement and provide the same for 2018. Using these schedules please show the development of the average commission used to develop the percent shown in Table 6 as well as the associated pmpm.

Answer 9. The 2018 broker commission schedule is yet to be finalized. CBC does not anticipate any changes to small group broker commissions in 2018. Attached please find the 1/1/2017 copy of the broker agreement – unredacted version. Files are as follows:

a. Agent Agreement: "SG_17-37_Initial_CAAC_PPO_Broker_Supporting_CONF_20170714"
b. Preferred Producer Master Agreement: "SG_17-37_Initial_CAAC_PPO_PPMABroker_Supporting_CONF_20170714.pdf"

The broker commission applied in rating is taken directly from CBC's Finance Department's line of business report for small group YTD 2017.

Question 10. If you wish to make adjustments to the projected RA amount included in this rate submission and the URRT, based on the June 30, 2017 Summary Report on Transitional Reinsurance Payments and Permanent Risk Adjustment Transfers, please do so. Provide narrative and an Excel spreadsheet demonstrating the development and assumptions.

Answer 10. CBC will not make changes to its projected RA amount based on the June 30, 2017 report.

Question 11. Please ensure that all revisions are reflected in this resubmission.

Answer 11. I have checked the exhibits and memos for consistency and accuracy, including all revisions noted in this Q&A.

Question 12. Please provide a PDF file for public review (Public Rate Filing PDF) in SERFF to show the updated rate request. The following

updated supporting items must be included:

- Cover Letter
- Rate Change Request Summary (Attachment 1)
- Part 1 - Unified Rate Review Template (URRT)
- Part II – Consumer Friendly Justification
- Part III – Federal Actuarial Memorandum (redacted)
- PA Actuarial Memorandum (redacted)
- PA Actuarial Memorandum Rate Exhibits
- PA Plan Design Summary and Rate Tables
- Federal Rates Templates
- Service Area Maps
- Correspondence – Q&A's

Answer 12. I have included the Public Rate Filing PDF with this submission.

If you have any further questions regarding this filing, please call me at [redacted] (or via email at [redacted]. Thank you for your assistance in this matter.

Sincerely,

[redacted]

[redacted], ASA, MAAA
Manager, Actuarial Services

Question and Answer
Small Group Rates
Effective January 1, 2018

With this response, please find corresponding Q&A Exhibits in "SG_17-37_Initial_CAAC_PPO_Q&AExhibits3_Supporting_20170720.xlsm"

Please note on 7/20/17, I revised the filing to change the average increase from 5.1% to 7.9%. The proposed rates did not change. Instead, an error was found in the rate increase calculation. With this submission, the PA Rate Exhibits Table 10 2017 Calibrated Index rates are correctly inputted. Previous submissions used Q4 2017 instead of average 2017 calibrated index rates. Other CBC filings were reviewed and did not contain this same error. With this submission, all exhibits and memos reflecting the average rate change have been updated.

Additionally, the last submission on 7/14/2017 contained one rate that fell outside the 3-to-1 age rule by $0.01. With this submission, I am correcting the Federal rates template and PID rates template for plan 45127PA0010189, region 7, age 64 and over.

Question 1. In response to Answer 1 from our 7/7/2017 objections, please answer the following questions regarding trend:

a. In the response to Question 1 it is stated that the leverage adjustment is only applied to medical claims. Please explain why only medical claims are therefore not used for the development of the assumption. The difference between the medical allowed and incurred claims is only 0.2%.
b. Please provide allowed and paid claim information for the experience periods used in the trend calculation normalized for demographic, geographic, benefit, risk, etc. differences.

Answer 1.

a. While leveraging was only applied to medical trend, the data shows that we could apply it to both medical and prescription drug. The point in answer 1 is to show that the aggregate impact of the leveraging adjustment is very close to historical differences between incurred and allowed in total.
b. While CBC refers to historical trends to evaluate changes in the market, morbidity and utilization, future hospital and physician contracting drives the pricing trend. The hospital, physician and prescription drug trend models were explained in the June Q&A response. As requested, I have included historical trend data in Q&A Exhibit 1, which is the detailed data behind the historical trend summaries sent in June and 7/7/17 Q&A. This data contains demographic factors, which are a proxy for risk in a credible population. The data does not contain benefit or geographic adjustments, as this data is not readily available within the timeframe requested.

Question 2. In response to Answer 3 from our 7/7/2017 objections, please answer the following questions regarding risk adjustment:

a. Please support the change in trend assumption between the prior exhibit and the current exhibit. The support should not be related the 0.86 factor as this trend represents the projected increase in premium.
b. Additionally, based on filed rate changes weighted on 2016 Supplemental Health Care Exhibit membership, the increase between 2016 and 2017 was calculated as 6%. Please reconcile the filed rates with the "competitive intelligence" that indicates 25% increases.
c. Please reconcile the transitional member months shown in Q&A Exhibit 3 with the transitional lives shown in Q&A Exhibit 1 from June 26th.
d. In your Answer 13 response on 6/26/2017 you state "Transitional small group members do not have significantly different experience than ACA (net risk adjustment)." Please provide an explanation for why a decrease in morbidity is not expected in the build-up of the projected index rate to mirror the decrease assumed in the risk score for the transitional plans.

Answer 2.

a. There is much uncertainty in anticipating 2018 RA payment transfers. As explained in the June Q&A, the 14% administrative fee adjustment was implicit to the SW average premium calculation rather than explicitly shown as a line item. The addition of the administrative fee line item adjustment resulted in a change in the explicit 2-year premium increase.
b. With this submission, I am making two revisions to the RA projection calculation, but the final RA projection is staying the same. Originally, CBC estimated the 2017 average rate increase to be 25% due to the fact that CBC filed a 3% increase in 2017, and CBC rates are 20%-25% lower than competitors. But given the Department's statewide information, we are revising this estimate to 6.8% annually. The second revision is to reflect data submitted in response to the 7/7/17. In the Q&A Exhibits 20170714, Exhibit 3, the calculated change in RA due to transitional policies is 4%. This is now being reflected in Exhibit K (changed from 2% to 4%).
c. The definition of transitional in Q&A Exhibit 3 is not the same as the definition used in the June Q&A Exhibit1. Q&A Exhibit 3 represents former transitional groups that have moved into the ACA-compliant/risk-adjusted pool. So these are groups that were transitional for part of 2016, but moved into the risk-adjusted pool during the year. For example, a group with a July renewal date has 6 months outside of the risk-adjusted pool and 6 months in the risk-adjusted pool – only the 6 months in the risk-adjusted pool is shown in Q&A Exhibit 3. The member months on the June Q&A Exhibit 1 are true transitional months (member months in a transitional plan).
d. Transitional group data is included in the BEP and the projection period, so the claim projection does not need to be adjusted for changes in morbidity. The RA transitional adjustment is due to the fact that transitional groups do not have 12 months of data in the ACA (risk-adjusted) pool in 2016, but will have a full 12 months in 2018.

Question 3. In response to Answer 4 from our 7/7/2017 objections please reconcile these two seemingly contradictory statements from your response:

a. "CBC does not expect large claims to distort cost differences when compiling data at the regional level."
b. "Additionally, large claims drive cost differences between providers, so CBC deemed it appropriate to keep large claims in the analysis."

Answer 3. By the first statement, I mean that the population used remains credible even when segmented into three regions. If CBC would be doing an analysis at the county level rather than the regional level, we would have more concerns about large claims skewing the relative cost across counties. But the regional split still allows for a credible number of members in each bucket so that one or two claims will not distort the relativity. By the second statement, I mean that expensive procedures highlight the difference in contracting. Large claims and/or complex procedures drive the differences in hospital contracting. For example, let's say hospital A and B only perform 2 procedure: 1 low cost and 1 high cost. If hospital A performs a low-cost OP surgery at 30% higher cost than hospital B, but performs high-cost IP surgery at 30% below hospital B, CBC wants to capture the impact of both. In total, hospital A is lower cost than hospital B.

If you have any further questions regarding this filing, please call me at [redacted] (or via email at [redacted] or [redacted] Thank you for your assistance in this matter.

Sincerely,

[redacted]
