2018 ACA-Compliant Health Insurance Rate Filing Guidance

Pennsylvania Insurance Department

March 14, 2017

Keystone Health Plan Central (KHPC) – Individual Plans

Rate request filing ID # CAB-131022039 - This document is prepared by the insurance company submitting the rate filing as a consumer tool to help explain the rate filing. It is not intended to describe or include all factors or information considered in the review process. For more information, see the filing at <http://www.insurance.pa.gov/Consumers/ACARelatedFilings/>

Overview

Initial requested average rate change:	4.7% ¹
Revised requested average rate change:	4.9%
Range of requested rate change:	4.8% to 5.0%
Effective date:	1/1/2018
People impacted:	3,011
Available in:	Rating Area 6, Rating Area 7, and Rating Area 9

Key information

Jan. 2016-Dec. 2016 financial experience

Premiums	\$104,079,318
Claims	\$127,467,804
Administrative expenses	\$13,372,802
Taxes & fees	\$9,480,252
Company made (after taxes)	\$(46,241,540)

How it plans to spend your premium

This is how the insurance company plans to spend the premium it collects in 2018:

Claims:	81.7%
Administrative:	11.8%
Taxes & fees:	4.5%
Profit:	2.0%

The company expects its annual medical costs to increase **13.7%**.

Explanation of requested rate change

Primary drivers of requested change

- Historical claim experience
- Reimplementation of Health Insurer Fee in 2018

Changes being requested are also based upon consideration of the factors that influence future period cost structures. The primary drivers of change in future costs are:

- Anticipated increase in facility and physician unit costs
- Anticipated changes in prescription drug unit costs
- Continuing change in utilization such as
 - o Intensity of medical services rendered
 - o Changes in place of service (e.g. continued migration of inpatient stays to outpatient setting)
 - o Further migration from brand prescription drugs to generic prescription drugs
 - o Favorable impacts of value based benefits designs
- Prescription drug patent expirations and new to market brand drugs
- Leveraging associated with unchanged cost share components such as deductible and copays
- Inflation adjustment to administrative expenses

¹ Note that insurers will have the opportunity to revise their rate change request in July, after they are scheduled to receive updated information about the impact of a federal program called risk adjustment. This document will be updated accordingly at that time.

[illegible]

KEYSTONE HEALTH PLAN CENTRAL RFJ Part II – Consumer Friendly Justification

Rate Increase Considerations: Changes being requested are based upon consideration of the factors that influence future period cost structures. The primary drivers of change in future costs are:

- Anticipated increase in facility and physician unit costs
- Anticipated changes in prescription drug unit costs
- Continuing change in utilization such as
 - Intensity of medical services rendered
 - Changes in place of service (e.g. continued migration of inpatient stays to outpatient setting)
 - Further migration from brand prescription drugs to generic prescription drugs
 - Favorable impacts of value based benefits designs
- Prescription drug patent expirations and new to market brand drugs
- Leveraging associated with unchanged cost share components such as deductible and copays
- Inflation adjustment to administrative expenses
- Reimplementation of the Health Insurer Fee in 2018

KEYSTONE HEALTH PLAN CENTRAL, INC.

ACTUARIAL MEMORANDUM

Individual Rates

Effective January 1, 2018

General Information

Company Information

- Company Legal Name: Keystone Health Plan Central
- State: PA
- HIOS Issuer ID: 53789
- Market: Individual
- Effective Date: 1/1/2018

PID Company Information

- Company Name: Keystone Health Plan Central (KHPC)
- NAIC: 95199
- Market: Individual
- On/Off Exchange: Off Exchange
- Effective Date: 1/1/2018
- Average Rate Change: 4.9%
- Range of Requested Rate Change: 4.8% to 5.0%
- Product: HMO
- Rating Areas: 6,7,9
- Metal Levels: Bronze, Catastrophic
- Current Covered Lives and Policyholders: 3,011/2,130
- Number of Plans: 2
- Contract Form #: KHPC-Ind-HMO- 21cntyBroadNet-Agmt-v0118
- Form Filing SERFF #: CABC-131010056
- Binder SERFF #: CABC-PA18-125072213
- HIOS Issuer ID: 53789
- HIOS Submission Tracking Number: 53789-956004650371312668

Company Contact Information

- Primary Contact Name: [REDACTED]
- Primary Contact Telephone Number: [REDACTED]
- Primary Contact Email Address: [REDACTED]

Scope and Purpose

By this filing, Keystone Health Plan Central (KHPC), a subsidiary of Capital BlueCross (CBC), submits rates for products to be made available to individuals on and after January 1, 2018. KHPC will offer individual products off the federally-facilitated exchange.

Rate History and Proposed Variations in Rate Changes

Market	Company	Effective Date	SERFF #	Annual Increase
Individual	KHPC	1/1/2014	CABC-129034249	0.00%
Individual	KHPC	1/1/2015	CABC-129635491	-8.00%
Individual	KHPC	1/1/2016	CABC-130076965	1.40%
Individual	KHPC	1/1/2017	CABC-130533953	55.1%

Proposed Rate Increases

KHPC is proposing an aggregate annual 4.9% rate increase. The rate change does vary by plan. The rate change is calculated in PA Rate Template Part III, Table 10, cell AC15.

Potential Regulatory Changes

Rates submitted by this filing assume that the current regulatory framework will be in place for the entirety of the 2018 plan year. Given federal regulatory uncertainty, Capital BlueCross requests the ability to refile rates if there are changes to regulations deemed to have rate/benefit impact, whether changes are by reform, repeal, or non-enforcement. Regulatory changes include but are not limited to:

- Individual Mandate
- Cost Sharing Reduction (CSR) Funding
- Sales Across State Lines

Membership

Membership is shown in PA Rate Template Part I, Table 1.

Benefit Changes 2017-2018

There are several benefit changes being implemented in 2018. All benefit changes comply with the uniform modification of coverage standards described in 45 CFR 147.106(e). Any plan with a benefit change that did not meet the uniform modification of coverage standard was terminated, and a new plan was created in its place. All terminated plans are listed in Exhibit R, and a summary of proposed 2018 benefits is included in Exhibit A.

Benefit changes by plan are listed in Exhibit A1, highlighted in yellow.

Experience Period Premium and Claims

Base Experience Period: The base experience period (BEP) includes completed fee-for-service paid and incurred claims for dates of service between January 1, 2016 and December 31, 2016.

Paid Through Date: Claims in the BEP are paid through February 28, 2017

Premiums (net of MLR Rebate) in Experience Period: Premiums are calculated on an earned basis in the BEP. MLR rebate adjustments are equal to zero as KHPC does not expect to refund any MLR rebates.

Allowed and Incurred Claims during the Experience Period:

	Incurred	Allowed
Amount of claims processed through the issuer's claim system:	\$128,512,123	\$150,132,595
Amount of claims processed outside of the issuer's claim system:	\$0	\$0
Amount of claims that represent best estimate of incurred but not paid:	\$2,274,019	\$5,779,654

Allowed claims are developed by combining paid claims with member cost-sharing.

Estimated Incurred but Not Paid Claims: Paid claims by date of service come directly from CBC's data warehouse. The method for calculating incurred claims in the BEP is as follows:

1. Historical fee-for-service claims are viewed by date of service and date of payment in a claims triangle.
2. The claims triangle payments are then accumulated by date of service to develop factors that represent the rate of accumulation or rate of "completion".
3. Historical rates of completion by duration are used to derive projected rates of completion. Some of the methods used to develop projected completion factors are averages (e.g. harmonic averages, time weighted averages, geometric averages) and regression methods. Numerous items are considered when viewing these averages or regression statistics, such as the impact of high claims on perceived completion patterns.
4. For durations that exhibit a projected completion factor greater than the Valuation Actuary's chosen threshold (e.g. 80% complete), cumulative paid and incurred claims are divided by the projected completion factor to arrive at ultimate incurred claims. For

durations that are less than the chosen threshold, a projection methodology is used. Similar to completion factor development, projection methodologies are worthy of a lengthy discussion. In general, an ultimate incurred claims PMPM is derived by projecting a recent 12-month period to the current month(s) and seasonally adjusting.

5. With all months having both a cumulative paid amount and an estimated ultimate incurred amount, the completion factors used in pricing are calculated by taking the quotient of the two. Allowed completion and incurred completion are assumed to be identical.
6. Both allowed and paid claims in the BEP are completed by applying completion factors by incurred month developed in Step 6.

$$BEP\ Incurred\ Claims = \sum \frac{BEP\ Paid\ Claims\ by\ Incurred\ Month}{Completion\ by\ Incurred\ Month}$$

$$BEP\ Allowed\ Claims = \sum \frac{BEP\ Paid\ Claims + BEP\ Member\ Cost\ Share\ by\ Incurred\ Month}{Completion\ by\ Incurred\ Month}$$

Benefit Categories

Claims in the benefit categories displayed in the URRT come directly from CBC's data warehouse. See Exhibit C for a description of benefits by benefit category.

Projection Factors

Changes in Morbidity: Found in URRT Worksheet 1, "Pop'l risk Morbidity".

Changes in Benefits:

1. Pediatric Dental and Pediatric Vision: The following PMPM allowed charges are added to the projection period allowed claims PMPM:
 - Pediatric dental coverage: 5.01 allowed/3.61 incurred
 - Pediatric vision coverage 0.46 allowed/0.46 incurred

This was added to the projected allowed claims in Exhibit B by applying a factor to the experience period, "Other Medical" claims. The development of pediatric dental and vision projected claims is described below. Pediatric Dental and Vision benefits are underwritten by KHPC's subsidiary, Capital Advantage Assurance Company (CAAC).

See Exhibit C for the pediatric dental and vision rate development.

Changes in Demographics: KHPC does not expect changes in demographics in its individual population.

Other Adjustments: Found in URRT, Worksheet 1, "Other".

1. **List-Billed Adjustment:** KHPC is adjusting the claim experience for the impact of the list-billing rating methodology required under CFR Part 147.102. This section requires that family rates are calculated by summing the premiums for each individual family member, provided at most three child dependents under age 21 are taken into account. This rating rule requires an adjustment to premium.

Trend Factors: Trend levels reflect our best estimate of changes in utilization, provider reimbursement contracts, the network of facilities and providers, disease management initiatives and the impact of utilization management.

The following is a description of considerations used to determine trend.

1. **Base Cost/ Change in hospital and physician contracting:** The contracted increase in reimbursements to hospitals and physicians is the basis of cost trends. KHPC uses a hospital and physician contracting model to determine future trends. This model contains all known contracted payment increases, as well as estimated increases in provider payments.
2. **Utilization Considerations:**
 - a. Intensity of medical services rendered
 - b. Changes in place of service (e.g. continued migration of inpatient stays to outpatient setting)
 - c. Further migration from brand prescription drugs to generic prescription drugs
 - d. Favorable impacts of value based benefits designs
3. **Intensity:** Intensity is defined as the amount of inputs used to provide each unit of service. This can best be seen in an example:

Year 2017

<u>Type of Service</u>	<u>Units</u>	<u>Cost per Unit</u>
X-Ray	1	\$200
MRI	1	\$5,000
Total	2	\$5,200

Year 2018

<u>Type of Service</u>	<u>Units</u>	<u>Cost per Unit</u>
X-Ray	0	\$200
MRI	2	\$5,000
Total	2	\$10,000

Total Annual Trend	92%
--------------------	-----

2. **Underwriting Cycle:** The underwriting cycle is defined as the tendency to swing between profitable and unprofitable periods over time. The underwriting cycle is exacerbated partly by pricing performed with incomplete information as to the level of current experience trends. A reaction delay occurs, as carriers tend to rely on measurements of past experience in developing current pricing assumptions. As a result, carriers are often

increasing their pricing trends when actual experience trends have begun to decline, and decreasing their pricing trends actual trends are increasing. KHPC strives to mitigate the underwriting cycle by keeping trends consistent through times of increasing and decreasing claim cost and utilization.

See Exhibit E for KHPC's pricing trend, as well as cost and utilization components of the pricing trend.

Credibility Manual Rate Development

KHPC individual data was used to develop rates. No credibility manual is used.

Credibility of Experience

Credibility Manual Rate Development: KHPC experience data is given 100% credibility.

Paid to Allowed Ratio

KHPC used the prescribed URRT allowed claim rate development methodology in conjunction with a paid and incurred rate development methodology to determine final premium rates. The URRT projects allowed claims, and uses a paid-to-allowed ratio in order to adjust allowed claims to paid levels. This value is then used to develop premiums. In order to determine the paid-to-allowed ratio, KHPC projected paid and incurred claims, adjusted for benefits, to the experience period.

Projected Paid and Incurred Claims are calculated as follows:

1. Gather claims experience as described in the Data section above.
 - a. Base Experience Period (BEP) Paid Claims, Capitation, and Rx Rebates
 - b. BEP Member Months
2. Develop BEP *Paid and Incurred Claims*:

$$BEP \text{ Paid and Incurred Claims} = \frac{BEP \text{ Paid Claims}}{Completion \text{ Factor}}$$

The development of completion factors is described in Experience Period Premium and Claims above.

3. Develop the *BEP Paid and Incurred Claim PMPM*:

$$BEP \text{ Paid and Incurred Claim PMPM} = \frac{BEP \text{ Paid and Incurred Claims}}{BEP \text{ Member Months}}$$

4. Develop *Trended Claim PMPM*: Using the aggregate trend described in the Projection Factors section above, trend the BEP Paid and Incurred Claim PMPM from the midpoint of the experience period to the midpoint of the rating period.

Trended Claim PMPM

$$= [\text{BEP Paid and Incurred Claim PMPM}] \times (1 + [\text{Trend\%}])^{\text{Trend Months}/12}$$

5. Develop *Projected Paid and Incurred Claim PMPM*:

Projected Paid and Incurred Claims PMPM

$$= [\text{Trended Claim PMPM}] \times [\text{Benefit Adjustment}] \\ \times [\text{Morbidity Adjustment}] \times [\text{Network Adjustment}] \times [\text{List} \\ - \text{Billed Adjustment}]$$

The *Benefit Adjustment*, *Morbidity Adjustment*, and *List-Billed Adjustment* are discussed in the Projections Factors section above.

6. Develop *Projected Claims PMPM by Benefit* as follows:

- a. KHPC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a \$0 office visit copayment and a \$25 ER copayment. Given a particular benefit design (for example, \$20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on cumulative probability distributions (CPDs), where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.
- b. This actuarial cost model derives a Manual Cost for each benefit design in the experience period, as well as plans being offered in the projection period. The average Manual Cost of the experience is compared to the Manual Cost of the base plan. The projected experience period data is then adjusted to the base plan:

$$\text{Benefit Level Adjustment} = \frac{\text{Average Manual Cost in Projection Period}}{\text{Manual Cost of Base Plan}}$$

- c. The *Projected Paid and Incurred Claim PMPM* (Step 5) is then adjusted to the Base Plan as follows:

Base Plan Paid and Incurred Claims PMPM

$$= \frac{\text{Benefit Adjusted Paid and Incurred Claims PMPM}}{\text{Benefit Level Adjustment} \times \text{Avg Induced Demand} \times \text{Avg Network} \times \text{Avg Catastrophic}}$$

Where Avg Induced Demand is the average premium impact of induced demand rating factor. Avg Network is the average premium impact of network factors. And Avg Catastrophic is the average premium impact of Catastrophic Adjustment factor. These factors are discussed in the Plan Adjusted Index Rate section below.

- d. Each additional benefit design has its own unique Manual Cost, which can then be compared to the Base Plan to develop a Benefit Relativity:

$$\text{Benefit Relativity A} = \frac{\text{Manual Cost of Benefit A}}{\text{Manual Cost of Base Plan}}$$

- e. The Benefit Relativity developed in d. above is then used as a gauge to develop a final *Pricing Relativity*. This pricing relativity is developed using actuarial judgment including the following considerations:
 - i. Final premium relativities must make sense based on benefits. For example, the annual cost difference between a HMO 2000 and HMO 1000 must be less than \$1000.
 - ii. Adjustments for plan designs that fall outside of the actuarial cost model.

- a. So the *Projected Claims PMPM by Benefit* is:

$$\begin{aligned} \text{Projected Claims PMPM Benefit A} \\ = \text{Projected Claims PMPM Base Plan} \\ \times \text{Pricing Relativity A} \end{aligned}$$

- b. And to arrive at the *Total Projected Claims PMPM*, KHPC assumes a distribution of members across the benefit plans being offered in 2018. The *Total Projected Claims PMPM* :

$$\begin{aligned} = \text{Projected Claims PMPM Benefit A} \times \text{Expected Member Dist of Benefit A} \\ + \text{Projected Claims PMPM Benefit B} \\ \times \text{Expected Member Dis of Benefit B} + \dots \end{aligned}$$

- 7. The Paid-To-Allowed Ratio is then:

$$\text{Paid to Allowed Ratio} = \frac{\text{Total Projected Claims PMPM}}{\text{Projected Allowed Claims at Current Benefits}}$$

See Exhibit G for the development of the *Paid-to-Allowed Ratio*.

Risk Adjustment

Projected Risk Adjustments PMPM:

Relevant to 2018 pricing is the impact of Commercial Risk Adjustment (CRA) payment transfers that are expected to be earned in 2018. The 2018 pricing impact is:

$$\begin{aligned} & [Net\ Projected\ Risk\ Adjustments\ PMPM] \\ & = [Projected\ CRA\ Transfer\ PMPM] - [Risk\ Adjustment\ Fee\ PMPM] \end{aligned}$$

The following items are those that we deem important in generating a CRA payment transfer adjustment:

1. Risk profile of the those enrolled in CRA eligible plans for the market or state (i.e. competitors) relative to risk profile of CRA eligible membership enrolled in our plans
2. Statewide average premiums
3. Current market penetration of this company and competitors in the market and in the state
4. The impact of transitional policies throughout the remainder of 2017 and 2018
5. 2016 risk adjustment results
6. Market improvement in coding risk

To fund the HHS-risk adjustment program, issuers will remit to HHS a fee of \$0.13 PMPM. The Risk Adjustment Fee PMPM is included in the URRT Worksheet 1, “Projected Risk Adjustments PMPM”.

Non-Benefit Expenses and Profit & Risk

Administrative Expense Load:

1. Administrative Expense: Calculated using an allocation method from KHPC’s finance department, and trended to the rating period. Costs are allocated according to results reported through a company-wide questionnaire. On an annual basis, each cost center within the company completes a questionnaire listing the distribution of costs (in percentage terms) by product as well as by market segment. For example, the questionnaire will ask what percentage of time is spent on PPO versus HMO versus Drug versus Medicare. And separately will ask what percentage of time is spent on large group, small group, individual, and government programs. Using those distributions, all costs needed to perform the business are allocated to the proper market segments and lines of business. The administrative expense applied in the rate development is the total expense allocated to KHPC individual products. Administrative expenses are included in the URRT Worksheet 1, “Administrative Load”.
2. Broker Expense: Calculated based on KHPC’s explicit per contract broker fee. Broker Expense is included in the URRT Worksheet 1, “Administrative Load”.
3. Member Out-Of-Pocket (OOP) and Ways to Save:
 - a. Description: These products offer enhanced transparency to cost savings potential both prospectively and retrospectively. These are new services included in each

of KHPC's plans that work to decrease costs by engaging members in their health care decisions. The Member OOP program will show a member, prospectively, the value of a service and the impact of member cost-sharing when that service is incurred. It allows a member to shop for the best price while introducing transparency related to the member's expected cost share at the time of service. The "Ways to Save" program allows members to receive alerts, retrospectively, informing them of cost savings that could have been incurred had they have known about competing medical providers in the area. The alerts are retrospective and offer transparency around member's healthcare options.

- b. **Costs:** The vendor of these products charge both per contract per year (PCPY) user fees as well as initial implementation fees and annual subscription fees. The PCPY user fees are \$0.115 and \$1.7955 for "Member Out of Pocket" and "Way to Save" respectively. The vendor also charges a 25% administrative load, annual subscription fee, and a \$100,000 implementation fee. The implementation fee is amortized over 5 years across several hundred thousand members. Using book of business member-to-contract ratios and converting to a per member per month (PMPM), in conjunction with the administrative load and implementation fee yields a PMPM charge of \$0.0128 and \$.20 for Member Out of Pocket and Ways to Save respectively. Annual subscription fees charged yields another \$0.04 PMPM. All of these items combined allow us to arrive at a requested \$0.25 PMPM. These programs are included in the URRT Worksheet 1, "Administrative Load".
4. **Value-Based Benefits (VBB):** Standard with each plan, Capital BlueCross includes wellness incentives to maximize the likelihood that consumers make positive behavioral changes, which lead to better health, and curbed health care costs for employers and employees alike. The incentive is as follows:
 - a. Complete CBC Personal Profile and receive a gift card reward.
 - b. Complete one online coaching program and receive a gift card reward.
 - c. The wellness program is administered through a vendor and costs are based on vendor fees.
5. **Identity Theft Coverage:** Identity protection offering will include the following components:
 - a. Credit monitoring – Monitors activity that may affect credit
 - b. Fraud detection – Identifies potentially fraudulent use of identity or credit
 - c. Fraud resolution support – Assists members in addressing issues that arise in relation to credit monitoring and fraud detection

Profit (or Contribution to Surplus) & Risk Margin:

6. **Contingency:** Contingency is included in the URRT Worksheet 1, "Profit and Risk".

Taxes and Fees:

1. **Fee for Patient-Centered Outcomes Research Trust Fund (PCOR):** As per the Notice of Proposed Rulemaking for Fees on Health Insurance Policies and Self-Insured Plans for the Patient-Centered Outcomes Research Trust Fund (REG-136008-11), 77 Fed. Reg.

22691: For policy years ending on or after October 1, 2013, and before October 1, 2014, the applicable dollar amount in \$2 per member per year (\$0.17 PMPM), trended annually. At an estimated trend of 4%, the 2016 projected fee is \$0.18 PMPM. PCOR is included in the URRT Worksheet 1, "Taxes and Fees".

2. Health Insurer Fee (HIF) – Section 9010 of PPACA and Section 1406 of the Reconciliation Act (which modified PPACA) refer to HIF. The fee is a fixed-dollar amount distributed across health insurance providers: \$8 billion in 2014, \$11.3 billion in 2015-2016, suspended in 2017, and \$14.3 billion in 2018.
3. Exchange Fee – All issuers participating in a federally-facilitated exchange will remit 3.5% of premium to HHS. KHPC will only offer plans off exchange in 2018, so the exchange fee is \$0.
4. Federal Income Tax: Projected that Federal Income Tax will be collected on the 2% contingency built into the premium. The projected Federal Income Tax is included in the URRT Worksheet 1, "Taxes and Fees".

See Exhibit H for all KHPC retention values.

Projected Loss Ratio

See Exhibit I for the projected loss ratio calculation. The projected loss ratio is calculated using the federally prescribed MLR methodology.

Single Risk Pool

The data used to develop rates and shown in the URRT abides by 45 CFR part 156.80(d) single risk pool requirements. The single risk pool reflects all covered lives for every non-grandfathered product/plan combination for KHPC in the individual market segment. KHPC did not have any individual transitional policies in the experience period.

Index Rate

The experience period index rate is KHPC's allowed claims PMPM, set in accordance with the single risk pool provision. All KHPC covered benefits are categorized as Essential Health Benefits (EHBs), therefore no adjustment was made to the experience period index. Only two EHB categories are not included in the experience period: pediatric dental and pediatric vision. Pediatric dental and pediatric vision claim PMPMs are added to the projected index rate as described in the Projection Factors section above.

Projected Allowed Claims: The KHPC experience period allowed claims, benefit-adjusted, trended to the projection period (See Projection Factors section above), and credibility adjusted, is the *Projected Allowed Claims at Current Benefits*. This number is reflected in Worksheet 1 of the URRT ("Projected Allowed Experience Claims PMPM (w/ applied credibility if applicable)").

To calculate the projected index rate:

1. Start with *Projected Allowed Claims at Current Benefits*
2. The *Projected Allowed Claims at Current Benefits* reflect EHBs 100 percent, so no adjustment needs to be made to add EHBs and remove non-EHB claim cost. This is the index rate for individuals renewing January – December.

See Exhibit J for the Index Rate.

Market Adjusted Index Rate

The Market Adjusted Index Rate is calculated as the Index Rate adjusted for all allowable market-wide modifiers defined in the market rating rules, 45 CFR Part 156.80(d)(1). So,

$$\begin{aligned}
 &[\text{Market Adjusted Index Rate}] \\

 &\div [\text{Paid to Allowed Ratio}]
 \end{aligned}$$

See Exhibit K for the development of the Market Adjusted Index Rate.

Plan Adjusted Index Rate

The Plan Adjusted Index Rates are included in Worksheet 2, Section IV of the URRT.

The following adjustments were used to derive the Plan Adjusted Index Rate:

1. Actuarial Value and Cost Sharing adjustment: The Actuarial Value and Cost Sharing Adjustment is determined using KHPC's actuarial cost model. KHPC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a \$0 office visit copayment and a \$25 ER copayment. Given a particular benefit design (for example, \$20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a claim PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on CPDs, where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.
2. Induced Demand: Higher than average utilization due to benefit richness.
3. Provider Network: The Provider network is the same across plans.
4. Adjustment for benefits in addition to EHBs: No benefits other than EHBs are included in the plans, so no adjustment is necessary.
5. Catastrophic Plans: Applied to catastrophic plans to reflect lower morbidity.
6. Adjustment for distribution and administrative costs: Described in Non-Benefit Expenses and Profit & Risk section above.

6. Tobacco Adjustment: Calculated as the average tobacco factor applied across the risk pool.

The development of the Plan Adjusted Index rate is found in Exhibit L, and summarized in Exhibit M.

Calibration

A calibration must be performed in order to apply the allowable rating factors (age and geography) to the Plan Adjusted Rate in order to calculate the Consumer Adjusted Premium Rates.

Age Curve Calibration: The average age factor is calculated by taking the member-weighted average of current individual enrollment by age in KHPC. Age factors are applied in accordance with CMS's Standard Age Curve.

Geographic Factor Calibration: The projected average geographic factor is calculated by taking the KHPC member-weighted average by region.

The calibration is:

$$[\textit{Calibrated Plan Adjusted Index Rate}] = [\textit{Plan Adjusted Index Rate}] \div ([\textit{Age Curve Calibration}] \times [\textit{Geographic Factor Calibration}])$$

All consumer-level adjustments are applied uniformly to all plans in the Single Risk Pool. These adjustments do not vary by plan. The calibration factors and development are found on Exhibit N. Age and Geographic factors are displayed in Exhibit O.

Geographic Rating Analysis

Geographic Factors: CMS has approved nine geographical rating areas (GRA) in the state of Pennsylvania. KHPC operates in a 21-county area of Pennsylvania, encompassing three of the nine defined regions.

KHPC performed regional analysis to quantify the cost difference between the three regions in our service area. The analysis gathered allowed claims in a 12-month period by region, normalized for demographics. We then compared the claim cost for each of the three regions, and found cost differentials between the regions, mostly due to differences in hospital contracting between regions. The data from the analysis is found in Exhibit Q.

Consumer Adjusted Premium Rate Development

The Consumer Adjusted Premium Rate is developed as follows:

1. Member-Level Consumer Adjusted Premium Rate:

$$\begin{aligned}
& [\text{Member} - \text{Level Consumer Adjusted Premium Rate}] \\
& = [\text{Calibrated Plan Adjusted Index Rate}] \times [\text{Age Factor}] \\
& \times [\text{Geographic Factor}]
\end{aligned}$$

2. $[\text{Family Consumer Adjusted Premium Rate}] = \sum [\text{Member} - \text{Level Consumer Adjusted Premium Rate}]$
 With no more than three child dependents under age 21 taken into account

Base Rates, i.e. Calibrated Plan Adjusted Index Rates, are found on Exhibit P.

AV Metal Values

The AV Metal Values included in Worksheet 2 of the URRT were based on the federally issued AV Calculator.

AV Pricing Values

All AV Pricing values were developed using KHPC's actuarial cost model and actuarial judgment as described in section Paid to Allowed above. Differences in health status are not included.

Membership Projection

The membership projections found in Worksheet 2 of the URRT were developed by assuming that moderate growth and similar distribution to current.

Terminated Products

See Exhibit R for a list of terminated products.

Attachments and Examples

The following is a list of Exhibits and Data to support this filing:

Exhibit A – Benefit Summary
 Exhibit A1 – Benefit Change Summary
 Exhibit B – Benefit Categories
 Exhibit C – Pediatric Dental and Vision Rate Development
 Exhibit D – Benefit Changes
 Exhibit E – Trend
 Exhibit F – URRT
 Exhibit G – Paid-to-Allowed Development
 Exhibit H – Retention
 Exhibit I – Projected Loss Ratio
 Exhibit J – Index Rate

Exhibit M – Plan Adjusted Index Rates
Exhibit N – Calibration
Exhibit O – Rating Factors
Exhibit P – Base Rates
Exhibit Q – Regional Analysis
Exhibit R – Terminated Products

PA Rate Template Part I through Part V

Actuarial Statement

I, [REDACTED], ASA, MAAA, am of the opinion that this filing is in compliance with the applicable Federal and State Laws and Regulations concerning the Patient Protection and Affordable Care Act and the Health Care and Education Reconciliation Act of 2010.

I, [REDACTED], ASA, MAAA, do hereby certify that:

1. This filing has been prepared in accordance with the following:
 - a. Actuarial Standard of Practice No. 5, “Health and Disability Claims”
 - b. Actuarial Standard of Practice No. 8, “Regulatory Filings for Rates and Financial Projections for Health Plans”
 - c. Actuarial Standard of Practice No. 12, “Risk Classification”
 - d. Actuarial Standard of Practice No. 23, “Data Quality”
 - e. Actuarial Standard of Practice No. 25, “Credibility Procedures Applicable to Accident and Health, Group Term Life, and Property/Casualty Coverage”
 - f. Actuarial Standard of Practice No. 26, “Compliance with Statutory and Regulatory Requirements for the Actuarial Certification of Small Employer Health Benefit Plans”
 - g. Actuarial Standard of Practice No. 41, “Actuarial Communications”.
2. The index rate is:
 - a. Projected in compliance with all applicable state and federal statutes and regulations (45 CFR 156.80(d) (1)).
 - b. Developed in compliance with the applicable Actuarial Standards of Practice.
 - c. Reasonable in relation to the benefits provided and the population anticipated to be covered.
 - d. Neither excessive nor deficient.
 - e. Adjusted by only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) to generate plan level rates.
3. The percent of total premium that represents essential health benefits included in Worksheet 2, Sections III and IV were calculated in accordance with actuarial standards of practice.

4. The AV Calculator was used to determine the AV Metal Values shown in Worksheet 2 of the Part I Unified Rate Review Template for all plans, and in accordance with CFR 156.135(b)(2) as necessary. For any plan requiring an alternative method, the development of the actuarial value is based on one of the acceptable alternative methods outlined in 156.135(b)(2) or 156.135(b)(3) for benefits that deviate substantially from the parameters of the AVC and have a material impact on the actuarial value.
 - a. The analysis was
 - i. conducted by a member of the American Academy of Actuaries, and
 - ii. performed in accordance with generally accepted actuarial principles and methods.
5. All factor, benefit and other changes from the prior approved filing have been disclosed in the actuarial memorandum.
6. New plans cannot be considered modifications of existing plans under the uniform modification standards in 45 CFR 147.106.
7. The information presented in the PA Actuarial Memorandum and PA Actuarial Memorandum Rate Exhibits is consistent with the information presented in the 2018 Rate Filing Justification.

KEYSTONE HEALTH PLAN CENTRAL, INC.

ACTUARIAL MEMORANDUM

Individual Rates

Effective January 1, 2018

General Information

Company Information

- Company Legal Name: Keystone Health Plan Central
- State: PA
- HIOS Issuer ID: 53789
- Market: Individual
- Effective Date: 1/1/2018

PID Company Information

- Company Name: Keystone Health Plan Central (KHPC)
- NAIC: 95199
- Market: Individual
- On/Off Exchange: Off Exchange
- Effective Date: 1/1/2018
- Average Rate Change: 4.9%
- Range of Requested Rate Change: 4.8% to 5.0%
- Product: HMO
- Rating Areas: 6,7,9
- Metal Levels: Bronze, Catastrophic
- Current Covered Lives and Policyholders: 3,011/2,130
- Number of Plans: 2
- Contract Form #: KHPC-Ind-HMO- 21cntyBroadNet-Agmt-v0118
- Form Filing SERFF #: CABC-131010056
- Binder SERFF #: CABC-PA18-125072213
- HIOS Issuer ID: 53789
- HIOS Submission Tracking Number: 53789-956004650371312668

Company Contact Information

- Primary Contact Name: [REDACTED]
- Primary Contact Telephone Number: [REDACTED]
- Primary Contact Email Address: [REDACTED]

Scope and Purpose

By this filing, Keystone Health Plan Central (KHPC), a subsidiary of Capital BlueCross (CBC), submits rates for products to be made available to individuals on and after January 1, 2018. KHPC will offer individual products off the federally-facilitated exchange.

Rate History and Proposed Variations in Rate Changes

Market	Company	Effective Date	SERFF #	Annual Increase
Individual	KHPC	1/1/2014	CABC-129034249	0.00%
Individual	KHPC	1/1/2015	CABC-129635491	-8.00%
Individual	KHPC	1/1/2016	CABC-130076965	1.40%
Individual	KHPC	1/1/2017	CABC-130533953	55.1%

Proposed Rate Increases

KHPC is proposing an aggregate annual 4.9% rate increase. The rate change does vary by plan. The rate change is calculated in PA Rate Template Part III, Table 10, cell AC15.

Potential Regulatory Changes

Rates submitted by this filing assume that the current regulatory framework will be in place for the entirety of the 2018 plan year. Given federal regulatory uncertainty, Capital BlueCross requests the ability to refile rates if there are changes to regulations deemed to have rate/benefit impact, whether changes are by reform, repeal, or non-enforcement. Regulatory changes include but are not limited to:

- Individual Mandate
- Cost Sharing Reduction (CSR) Funding
- Sales Across State Lines

Membership

Membership is shown in PA Rate Template Part I, Table 1.

Benefit Changes 2017-2018

There are several benefit changes being implemented in 2018. All benefit changes comply with the uniform modification of coverage standards described in 45 CFR 147.106(e). Any plan with a benefit change that did not meet the uniform modification of coverage standard was terminated, and a new plan was created in its place. All terminated plans are listed in Exhibit R, and a summary of proposed 2018 benefits is included in Exhibit A.

Benefit changes by plan are listed in Exhibit A1, highlighted in yellow.

Experience Period Premium and Claims

Base Experience Period: The base experience period (BEP) includes completed fee-for-service paid and incurred claims for dates of service between January 1, 2016 and December 31, 2016.

Paid Through Date: Claims in the BEP are paid through February 28, 2017

Premiums (net of MLR Rebate) in Experience Period: Premiums are calculated on an earned basis in the BEP. MLR rebate adjustments are equal to zero as KHPC does not expect to refund any MLR rebates.

Allowed and Incurred Claims during the Experience Period:

	Incurred	Allowed
Amount of claims processed through the issuer's claim system:	\$128,512,123	\$150,132,595
Amount of claims processed outside of the issuer's claim system:	\$0	\$0
Amount of claims that represent best estimate of incurred but not paid:	\$2,274,019	\$5,779,654

Allowed claims are developed by combining paid claims with member cost-sharing.

Estimated Incurred but Not Paid Claims: Paid claims by date of service come directly from CBC's data warehouse. The method for calculating incurred claims in the BEP is as follows:

1. Historical fee-for-service claims are viewed by date of service and date of payment in a claims triangle.
2. The claims triangle payments are then accumulated by date of service to develop factors that represent the rate of accumulation or rate of "completion".
3. Historical rates of completion by duration are used to derive projected rates of completion. Some of the methods used to develop projected completion factors are averages (e.g. harmonic averages, time weighted averages, geometric averages) and regression methods. Numerous items are considered when viewing these averages or regression statistics, such as the impact of high claims on perceived completion patterns.
4. For durations that exhibit a projected completion factor greater than the Valuation Actuary's chosen threshold (e.g. 80% complete), cumulative paid and incurred claims are divided by the projected completion factor to arrive at ultimate incurred claims. For

durations that are less than the chosen threshold, a projection methodology is used. Similar to completion factor development, projection methodologies are worthy of a lengthy discussion. In general, an ultimate incurred claims PMPM is derived by projecting a recent 12-month period to the current month(s) and seasonally adjusting.

5. With all months having both a cumulative paid amount and an estimated ultimate incurred amount, the completion factors used in pricing are calculated by taking the quotient of the two. Allowed completion and incurred completion are assumed to be identical.
6. Both allowed and paid claims in the BEP are completed by applying completion factors by incurred month developed in Step 6.

$$BEP\ Incurred\ Claims = \sum \frac{BEP\ Paid\ Claims\ by\ Incurred\ Month}{Completion\ by\ Incurred\ Month}$$

$$BEP\ Allowed\ Claims = \sum \frac{BEP\ Paid\ Claims + BEP\ Member\ Cost\ Share\ by\ Incurred\ Month}{Completion\ by\ Incurred\ Month}$$

Benefit Categories

Claims in the benefit categories displayed in the URRT come directly from CBC's data warehouse. See Exhibit C for a description of benefits by benefit category.

Projection Factors

Changes in Morbidity: Found in URRT Worksheet 1, "Pop'l risk Morbidity".

Changes in Benefits:

1. Pediatric Dental and Pediatric Vision: The following PMPM allowed charges are added to the projection period allowed claims PMPM:
 - Pediatric dental coverage: 5.01 allowed/3.61 incurred
 - Pediatric vision coverage 0.46 allowed/0.46 incurred

This was added to the projected allowed claims in Exhibit B by applying a factor to the experience period, "Other Medical" claims. The development of pediatric dental and vision projected claims is described below. Pediatric Dental and Vision benefits are underwritten by KHPC's subsidiary, Capital Advantage Assurance Company (CAAC).

See Exhibit C for the pediatric dental and vision rate development.

Changes in Demographics: KHPC does not expect changes in demographics in its individual population.

Other Adjustments: Found in URRT, Worksheet 1, "Other".

1. **List-Billed Adjustment:** KHPC is adjusting the claim experience for the impact of the list-billing rating methodology required under CFR Part 147.102. This section requires that family rates are calculated by summing the premiums for each individual family member, provided at most three child dependents under age 21 are taken into account. This rating rule requires an adjustment to premium.

Trend Factors: Trend levels reflect our best estimate of changes in utilization, provider reimbursement contracts, the network of facilities and providers, disease management initiatives and the impact of utilization management.

The following is a description of considerations used to determine trend.

1. **Base Cost/ Change in hospital and physician contracting:** The contracted increase in reimbursements to hospitals and physicians is the basis of cost trends. KHPC uses a hospital and physician contracting model to determine future trends. This model contains all known contracted payment increases, as well as estimated increases in provider payments.
2. **Utilization Considerations:**
 - a. Intensity of medical services rendered
 - b. Changes in place of service (e.g. continued migration of inpatient stays to outpatient setting)
 - c. Further migration from brand prescription drugs to generic prescription drugs
 - d. Favorable impacts of value based benefits designs
3. **Intensity:** Intensity is defined as the amount of inputs used to provide each unit of service. This can best be seen in an example:

Year 2017

<u>Type of Service</u>	<u>Units</u>	<u>Cost per Unit</u>
X-Ray	1	\$200
MRI	1	\$5,000
Total	2	\$5,200

Year 2018

<u>Type of Service</u>	<u>Units</u>	<u>Cost per Unit</u>
X-Ray	0	\$200
MRI	2	\$5,000
Total	2	\$10,000

Total Annual Trend	92%
--------------------	-----

2. **Underwriting Cycle:** The underwriting cycle is defined as the tendency to swing between profitable and unprofitable periods over time. The underwriting cycle is exacerbated partly by pricing performed with incomplete information as to the level of current experience trends. A reaction delay occurs, as carriers tend to rely on measurements of past experience in developing current pricing assumptions. As a result, carriers are often

increasing their pricing trends when actual experience trends have begun to decline, and decreasing their pricing trends actual trends are increasing. KHPC strives to mitigate the underwriting cycle by keeping trends consistent through times of increasing and decreasing claim cost and utilization.

See Exhibit E for KHPC's pricing trend, as well as cost and utilization components of the pricing trend.

Credibility Manual Rate Development

KHPC individual data was used to develop rates. No credibility manual is used.

Credibility of Experience

Credibility Manual Rate Development: KHPC experience data is given 100% credibility.

Paid to Allowed Ratio

KHPC used the prescribed URRT allowed claim rate development methodology in conjunction with a paid and incurred rate development methodology to determine final premium rates. The URRT projects allowed claims, and uses a paid-to-allowed ratio in order to adjust allowed claims to paid levels. This value is then used to develop premiums. In order to determine the paid-to-allowed ratio, KHPC projected paid and incurred claims, adjusted for benefits, to the experience period.

Projected Paid and Incurred Claims are calculated as follows:

1. Gather claims experience as described in the Data section above.
 - a. Base Experience Period (BEP) Paid Claims, Capitation, and Rx Rebates
 - b. BEP Member Months
2. Develop BEP *Paid and Incurred Claims*:

$$BEP \text{ Paid and Incurred Claims} = \frac{BEP \text{ Paid Claims}}{Completion \text{ Factor}}$$

The development of completion factors is described in Experience Period Premium and Claims above.

3. Develop the *BEP Paid and Incurred Claim PMPM*:

$$BEP \text{ Paid and Incurred Claim PMPM} = \frac{BEP \text{ Paid and Incurred Claims}}{BEP \text{ Member Months}}$$

4. Develop *Trended Claim PMPM*: Using the aggregate trend described in the Projection Factors section above, trend the BEP Paid and Incurred Claim PMPM from the midpoint of the experience period to the midpoint of the rating period.

Trended Claim PMPM

$$= [\text{BEP Paid and Incurred Claim PMPM}] \times (1 + [\text{Trend\%}])^{\text{Trend Months}/12}$$

5. Develop *Projected Paid and Incurred Claim PMPM*:

Projected Paid and Incurred Claims PMPM

$$= [\text{Trended Claim PMPM}] \times [\text{Benefit Adjustment}] \\ \times [\text{Morbidity Adjustment}] \times [\text{Network Adjustment}] \times [\text{List} \\ - \text{Billed Adjustment}]$$

The *Benefit Adjustment*, *Morbidity Adjustment*, and *List-Billed Adjustment* are discussed in the Projections Factors section above.

6. Develop *Projected Claims PMPM by Benefit* as follows:

- a. KHPC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a \$0 office visit copayment and a \$25 ER copayment. Given a particular benefit design (for example, \$20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on cumulative probability distributions (CPDs), where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.
- b. This actuarial cost model derives a Manual Cost for each benefit design in the experience period, as well as plans being offered in the projection period. The average Manual Cost of the experience is compared to the Manual Cost of the base plan. The projected experience period data is then adjusted to the base plan:

$$\text{Benefit Level Adjustment} = \frac{\text{Average Manual Cost in Projection Period}}{\text{Manual Cost of Base Plan}}$$

- c. The *Projected Paid and Incurred Claim PMPM* (Step 5) is then adjusted to the Base Plan as follows:

Base Plan Paid and Incurred Claims PMPM

$$= \frac{\text{Benefit Adjusted Paid and Incurred Claims PMPM}}{\text{Benefit Level Adjustment} \times \text{Avg Induced Demand} \times \text{Avg Network} \times \text{Avg Catastrophic}}$$

Where Avg Induced Demand is the average premium impact of induced demand rating factor. Avg Network is the average premium impact of network factors. And Avg Catastrophic is the average premium impact of Catastrophic Adjustment factor. These factors are discussed in the Plan Adjusted Index Rate section below.

- d. Each additional benefit design has its own unique Manual Cost, which can then be compared to the Base Plan to develop a Benefit Relativity:

$$\text{Benefit Relativity A} = \frac{\text{Manual Cost of Benefit A}}{\text{Manual Cost of Base Plan}}$$

- e. The Benefit Relativity developed in d. above is then used as a gauge to develop a final *Pricing Relativity*. This pricing relativity is developed using actuarial judgment including the following considerations:
- i. Final premium relativities must make sense based on benefits. For example, the annual cost difference between a HMO 2000 and HMO 1000 must be less than \$1000.
 - ii. Adjustments for plan designs that fall outside of the actuarial cost model.

- a. So the *Projected Claims PMPM by Benefit* is:

$$\begin{aligned} \text{Projected Claims PMPM Benefit A} \\ = \text{Projected Claims PMPM Base Plan} \\ \times \text{Pricing Relativity A} \end{aligned}$$

- b. And to arrive at the *Total Projected Claims PMPM*, KHPC assumes a distribution of members across the benefit plans being offered in 2018. The *Total Projected Claims PMPM* :

$$\begin{aligned} = \text{Projected Claims PMPM Benefit A} \times \text{Expected Member Dist of Benefit A} \\ + \text{Projected Claims PMPM Benefit B} \\ \times \text{Expected Member Dis of Benefit B} + \dots \end{aligned}$$

7. The Paid-To-Allowed Ratio is then:

$$\text{Paid to Allowed Ratio} = \frac{\text{Total Projected Claims PMPM}}{\text{Projected Allowed Claims at Current Benefits}}$$

See Exhibit G for the development of the *Paid-to-Allowed Ratio*.

Risk Adjustment

Projected Risk Adjustments PMPM:

Relevant to 2018 pricing is the impact of Commercial Risk Adjustment (CRA) payment transfers that are expected to be earned in 2018. The 2018 pricing impact is:

$$\begin{aligned} & [Net\ Projected\ Risk\ Adjustments\ PMPM] \\ & = [Projected\ CRA\ Transfer\ PMPM] - [Risk\ Adjustment\ Fee\ PMPM] \end{aligned}$$

The following items are those that we deem important in generating a CRA payment transfer adjustment:

1. Risk profile of the those enrolled in CRA eligible plans for the market or state (i.e. competitors) relative to risk profile of CRA eligible membership enrolled in our plans
2. Statewide average premiums
3. Current market penetration of this company and competitors in the market and in the state
4. The impact of transitional policies throughout the remainder of 2017 and 2018
5. 2016 risk adjustment results
6. Market improvement in coding risk

To fund the HHS-risk adjustment program, issuers will remit to HHS a fee of \$0.13 PMPM. The Risk Adjustment Fee PMPM is included in the URRT Worksheet 1, “Projected Risk Adjustments PMPM”.

Non-Benefit Expenses and Profit & Risk

Administrative Expense Load:

1. Administrative Expense: Calculated using an allocation method from KHPC’s finance department, and trended to the rating period. Costs are allocated according to results reported through a company-wide questionnaire. On an annual basis, each cost center within the company completes a questionnaire listing the distribution of costs (in percentage terms) by product as well as by market segment. For example, the questionnaire will ask what percentage of time is spent on PPO versus HMO versus Drug versus Medicare. And separately will ask what percentage of time is spent on large group, small group, individual, and government programs. Using those distributions, all costs needed to perform the business are allocated to the proper market segments and lines of business. The administrative expense applied in the rate development is the total expense allocated to KHPC individual products. Administrative expenses are included in the URRT Worksheet 1, “Administrative Load”.
2. Broker Expense: Calculated based on KHPC’s explicit per contract broker fee. Broker Expense is included in the URRT Worksheet 1, “Administrative Load”.
3. Member Out-Of-Pocket (OOP) and Ways to Save:
 - a. Description: These products offer enhanced transparency to cost savings potential both prospectively and retrospectively. These are new services included in each

of KHPC's plans that work to decrease costs by engaging members in their health care decisions. The Member OOP program will show a member, prospectively, the value of a service and the impact of member cost-sharing when that service is incurred. It allows a member to shop for the best price while introducing transparency related to the member's expected cost share at the time of service. The "Ways to Save" program allows members to receive alerts, retrospectively, informing them of cost savings that could have been incurred had they have known about competing medical providers in the area. The alerts are retrospective and offer transparency around member's healthcare options.

- b. **Costs:** The vendor of these products charge both per contract per year (PCPY) user fees as well as initial implementation fees and annual subscription fees. The PCPY user fees are \$0.115 and \$1.7955 for "Member Out of Pocket" and "Way to Save" respectively. The vendor also charges a 25% administrative load, annual subscription fee, and a \$100,000 implementation fee. The implementation fee is amortized over 5 years across several hundred thousand members. Using book of business member-to-contract ratios and converting to a per member per month (PMPM), in conjunction with the administrative load and implementation fee yields a PMPM charge of \$0.0128 and \$.20 for Member Out of Pocket and Ways to Save respectively. Annual subscription fees charged yields another \$0.04 PMPM. All of these items combined allow us to arrive at a requested \$0.25 PMPM. These programs are included in the URRT Worksheet 1, "Administrative Load".
4. **Value-Based Benefits (VBB):** Standard with each plan, Capital BlueCross includes wellness incentives to maximize the likelihood that consumers make positive behavioral changes, which lead to better health, and curbed health care costs for employers and employees alike. The incentive is as follows:
 - a. Complete CBC Personal Profile and receive a gift card reward.
 - b. Complete one online coaching program and receive a gift card reward.
 - c. The wellness program is administered through a vendor and costs are based on vendor fees.
5. **Identity Theft Coverage:** Identity protection offering will include the following components:
 - a. Credit monitoring – Monitors activity that may affect credit
 - b. Fraud detection – Identifies potentially fraudulent use of identity or credit
 - c. Fraud resolution support – Assists members in addressing issues that arise in relation to credit monitoring and fraud detection

Profit (or Contribution to Surplus) & Risk Margin:

6. **Contingency:** Contingency is included in the URRT Worksheet 1, "Profit and Risk".

Taxes and Fees:

1. **Fee for Patient-Centered Outcomes Research Trust Fund (PCOR):** As per the Notice of Proposed Rulemaking for Fees on Health Insurance Policies and Self-Insured Plans for the Patient-Centered Outcomes Research Trust Fund (REG-136008-11), 77 Fed. Reg.

22691: For policy years ending on or after October 1, 2013, and before October 1, 2014, the applicable dollar amount in \$2 per member per year (\$0.17 PMPM), trended annually. At an estimated trend of 4%, the 2016 projected fee is \$0.18 PMPM. PCOR is included in the URRT Worksheet 1, "Taxes and Fees".

2. Health Insurer Fee (HIF) – Section 9010 of PPACA and Section 1406 of the Reconciliation Act (which modified PPACA) refer to HIF. The fee is a fixed-dollar amount distributed across health insurance providers: \$8 billion in 2014, \$11.3 billion in 2015-2016, suspended in 2017, and \$14.3 billion in 2018.
3. Exchange Fee – All issuers participating in a federally-facilitated exchange will remit 3.5% of premium to HHS. KHPC will only offer plans off exchange in 2018, so the exchange fee is \$0.
4. Federal Income Tax: Projected that Federal Income Tax will be collected on the 2% contingency built into the premium. The projected Federal Income Tax is included in the URRT Worksheet 1, "Taxes and Fees".

See Exhibit H for all KHPC retention values.

Projected Loss Ratio

See Exhibit I for the projected loss ratio calculation. The projected loss ratio is calculated using the federally prescribed MLR methodology.

Single Risk Pool

The data used to develop rates and shown in the URRT abides by 45 CFR part 156.80(d) single risk pool requirements. The single risk pool reflects all covered lives for every non-grandfathered product/plan combination for KHPC in the individual market segment. KHPC did not have any individual transitional policies in the experience period.

Index Rate

The experience period index rate is KHPC's allowed claims PMPM, set in accordance with the single risk pool provision. All KHPC covered benefits are categorized as Essential Health Benefits (EHBs), therefore no adjustment was made to the experience period index. Only two EHB categories are not included in the experience period: pediatric dental and pediatric vision. Pediatric dental and pediatric vision claim PMPMs are added to the projected index rate as described in the Projection Factors section above.

Projected Allowed Claims: The KHPC experience period allowed claims, benefit-adjusted, trended to the projection period (See Projection Factors section above), and credibility adjusted, is the *Projected Allowed Claims at Current Benefits*. This number is reflected in Worksheet 1 of the URRT ("Projected Allowed Experience Claims PMPM (w/ applied credibility if applicable)").

To calculate the projected index rate:

1. Start with *Projected Allowed Claims at Current Benefits*
2. The *Projected Allowed Claims at Current Benefits* reflect EHBs 100 percent, so no adjustment needs to be made to add EHBs and remove non-EHB claim cost. This is the index rate for individuals renewing January – December.

See Exhibit J for the Index Rate.

Market Adjusted Index Rate

The Market Adjusted Index Rate is calculated as the Index Rate adjusted for all allowable market-wide modifiers defined in the market rating rules, 45 CFR Part 156.80(d)(1). So,

$$\begin{aligned}
 &[\text{Market Adjusted Index Rate}] \\
 &= ([\text{Index Rate}] \times [\text{Paid to Allowed Ratio}] \\
 &\quad - [\text{Net Projected ACA Reinsurance Recoveries}] \\
 &\quad - [\text{Net Projected Risk Adjustments PMPM}] + [\text{Exchange Fees PMPM}]) \\
 &\div [\text{Paid to Allowed Ratio}]
 \end{aligned}$$

See Exhibit K for the development of the Market Adjusted Index Rate.

Plan Adjusted Index Rate

The Plan Adjusted Index Rates are included in Worksheet 2, Section IV of the URRT.

The following adjustments were used to derive the Plan Adjusted Index Rate:

1. Actuarial Value and Cost Sharing adjustment: The Actuarial Value and Cost Sharing Adjustment is determined using KHPC's actuarial cost model. KHPC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a \$0 office visit copayment and a \$25 ER copayment. Given a particular benefit design (for example, \$20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a claim PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on CPDs, where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.
2. Induced Demand: Higher than average utilization due to benefit richness.
3. Provider Network: The Provider network is the same across plans.
4. Adjustment for benefits in addition to EHBs: No benefits other than EHBs are included in the plans, so no adjustment is necessary.
5. Catastrophic Plans: Applied to catastrophic plans to reflect lower morbidity.
6. Adjustment for distribution and administrative costs: Described in Non-Benefit Expenses and Profit & Risk section above.

6. Tobacco Adjustment: Calculated as the average tobacco factor applied across the risk pool.

The development of the Plan Adjusted Index rate is found in Exhibit L, and summarized in Exhibit M.

Calibration

A calibration must be performed in order to apply the allowable rating factors (age and geography) to the Plan Adjusted Rate in order to calculate the Consumer Adjusted Premium Rates.

Age Curve Calibration: The average age factor is calculated by taking the member-weighted average of current individual enrollment by age in KHPC. Age factors are applied in accordance with CMS's Standard Age Curve.

Geographic Factor Calibration: The projected average geographic factor is calculated by taking the KHPC member-weighted average by region.

The calibration is:

$$[\textit{Calibrated Plan Adjusted Index Rate}] = [\textit{Plan Adjusted Index Rate}] \div ([\textit{Age Curve Calibration}] \times [\textit{Geographic Factor Calibration}])$$

All consumer-level adjustments are applied uniformly to all plans in the Single Risk Pool. These adjustments do not vary by plan. The calibration factors and development are found on Exhibit N. Age and Geographic factors are displayed in Exhibit O.

Geographic Rating Analysis

Geographic Factors: CMS has approved nine geographical rating areas (GRA) in the state of Pennsylvania. KHPC operates in a 21-county area of Pennsylvania, encompassing three of the nine defined regions.

KHPC performed regional analysis to quantify the cost difference between the three regions in our service area. The analysis gathered allowed claims in a 12-month period by region, normalized for demographics. We then compared the claim cost for each of the three regions, and found cost differentials between the regions, mostly due to differences in hospital contracting between regions. The data from the analysis is found in Exhibit Q.

Consumer Adjusted Premium Rate Development

The Consumer Adjusted Premium Rate is developed as follows:

1. Member-Level Consumer Adjusted Premium Rate:

$$\begin{aligned}
& [\text{Member} - \text{Level Consumer Adjusted Premium Rate}] \\
& = [\text{Calibrated Plan Adjusted Index Rate}] \times [\text{Age Factor}] \\
& \times [\text{Geographic Factor}]
\end{aligned}$$

2. $[\text{Family Consumer Adjusted Premium Rate}] = \Sigma[\text{Member} - \text{Level Consumer Adjusted Premium Rate}]$
 With no more than three child dependents under age 21 taken into account

Base Rates, i.e. Calibrated Plan Adjusted Index Rates, are found on Exhibit P.

AV Metal Values

The AV Metal Values included in Worksheet 2 of the URRT were based on the federally issued AV Calculator.

AV Pricing Values

All AV Pricing values were developed using KHPC's actuarial cost model and actuarial judgment as described in section Paid to Allowed above. Differences in health status are not included.

Membership Projection

The membership projections found in Worksheet 2 of the URRT were developed by assuming that moderate growth and similar distribution to current.

Terminated Products

See Exhibit R for a list of terminated products.

Actuarial Statement

I, [REDACTED], ASA, MAAA, am of the opinion that this filing is in compliance with the applicable Federal and State Laws and Regulations concerning the Patient Protection and Affordable Care Act and the Health Care and Education Reconciliation Act of 2010.

I, [REDACTED], ASA, MAAA, do hereby certify that:

1. This filing has been prepared in accordance with the following:
 - a. Actuarial Standard of Practice No. 5, “Health and Disability Claims”
 - b. Actuarial Standard of Practice No. 8, “Regulatory Filings for Rates and Financial Projections for Health Plans”
 - c. Actuarial Standard of Practice No. 12, “Risk Classification”
 - d. Actuarial Standard of Practice No. 23, “Data Quality”
 - e. Actuarial Standard of Practice No. 25, “Credibility Procedures Applicable to Accident and Health, Group Term Life, and Property/Casualty Coverage”
 - f. Actuarial Standard of Practice No. 26, “Compliance with Statutory and Regulatory Requirements for the Actuarial Certification of Small Employer Health Benefit Plans”
 - g. Actuarial Standard of Practice No. 41, “Actuarial Communications”.
2. The index rate is:
 - a. Projected in compliance with all applicable state and federal statutes and regulations (45 CFR 156.80(d) (1)).
 - b. Developed in compliance with the applicable Actuarial Standards of Practice.
 - c. Reasonable in relation to the benefits provided and the population anticipated to be covered.
 - d. Neither excessive nor deficient.
 - e. Adjusted by only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) to generate plan level rates.
3. The percent of total premium that represents essential health benefits included in Worksheet 2, Sections III and IV were calculated in accordance with actuarial standards of practice.

4. The AV Calculator was used to determine the AV Metal Values shown in Worksheet 2 of the Part I Unified Rate Review Template for all plans, and in accordance with CFR 156.135(b)(2) as necessary. For any plan requiring an alternative method, the development of the actuarial value is based on one of the acceptable alternative methods outlined in 156.135(b)(2) or 156.135(b)(3) for benefits that deviate substantially from the parameters of the AVC and have a material impact on the actuarial value.
 - a. The analysis was
 - i. conducted by a member of the American Academy of Actuaries, and
 - ii. performed in accordance with generally accepted actuarial principles and methods.
5. All factor, benefit and other changes from the prior approved filing have been disclosed in the actuarial memorandum.
6. New plans cannot be considered modifications of existing plans under the uniform modification standards in 45 CFR 147.106.
7. The information presented in the PA Actuarial Memorandum and PA Actuarial Memorandum Rate Exhibits is consistent with the information presented in the 2018 Rate Filing Justification.

2018 Rates Table Template v7.1		All fields with an asterisk (*) are required. To validate press Validate button or Ctrl + Shift + I. To finalize, press Finalize button or Ctrl + Shift + F.			
		If you are in a community rating state, select Family-Tier Rates under Rating Method and fill in all columns.			
		If you are not in a community rating state, select Age-Based Rates under Rating Method and provide an Individual Rate for every age band.			
		If Tobacco is Tobacco User/Non-Tobacco User, you must give a rate for Tobacco Use and Non-Tobacco Use.			
		To add a new sheet, press the Add Sheet button, or Ctrl + Shift + H. All plans must have the same dates on a sheet.

2018 Rates Table Template v7.1	All fields with an asterisk (*) are required. To validate press Validate button or Ctrl + Shift + I. To finalize, press Finalize button or Ctrl + Shift + F.			
	If you are in a community rating state, select Family-Tier Rates under Rating Method and fill in all columns.			
	If you are not in a community rating state, select Age-Based Rates under Rating Method and provide an Individual Rate for every age band.			
	If Tobacco is Tobacco User/Non-Tobacco User, you must give a rate for Tobacco Use and Non-Tobacco Use.			
	To add a new sheet, press the Add Sheet button, or Ctrl + Shift + H. All plans must have the same dates on a sheet.

KEYSTONE HEALTH PLAN CENTRAL, INC.

Question and Answer Individual Rates Effective January 1, 2018

With this response, please find corresponding Q&A Exhibits in “Ind_17-50_Initial_KHP_HMO_Q&AExhibits_Supporting_20170626.xlsm”

Question 1. Confirm HIOS submission and update the cover letter to include the HIOS submission tracking number.

Answer 1. I have confirmed the HIOS submission tracking number. This is the HIOS URR submission tracking number.

Question 2. As we discussed, please revise the PA AM and all supporting documents as well as the SERFF Rate/Rule Schedule tab to show the average and range of rate increase from Table 10 as directed in the 2018 Guidance.

Answer 2. I have revised the Actuarial Memo and all supporting documents to use Table 10.

Question 3. Worksheet II cell G29 of the URR shows a projected product rate increase of 7.61% while Table 11 shows 7.5%. Please reconcile.

Answer 3. I have updated the URR to match the Table 11 average rate increase. Please note that the URR uses projected membership to calculate the average rate change, while Table 11 uses current membership. This could cause slight variations between the two templates. For this filing, the current and projected membership are equal, so the tables should match.

Question 4. Please review the mapping directions on pages 12 – 13 of the 2018 Rate Guidance and update Table 10 columns AG – AO, as necessary. When revising, please remain cognizant that the total covered lives in cell V15 must equal Table 1 cell D18. If the mapping is correct, please explain why Table 10 cell V15 is not equivalent to Table 1 Cell D18.

Answer 4. I have updated Table 1 to match Table 10 covered lives.

Question 5. The Rate/Rule Schedule tab in SERFF shows 2,130 as the number of policy holders, rate change request summary shows 3,307 and Table 10 cell V15 shows 3,011. Please review and revise for consistency. Be advised that the 2018 Guidance, consistent with the 2017 guidance, states that the policy holders in the Rate/Rule Schedule tab should show data for the number of covered lives.

Answer 5. I have updated the SERFF Rate/Rule Schedule tab and Table 1 to show 3,011 covered lives.

Question 6. The Plan Design Summary shows off exchange, while the PID rate pages show on and off exchange. Please review and revise for consistency.

Answer 6. I have revised the PID rate pages to show off exchange only.

Question 7. The cover letter indicates off exchange while other documents, including the binder, the PA rate exhibits and the service area map, show on/off exchange. Please review and revise for consistency.

Answer 7. All exhibits and the binder have been updated to show off-exchange only.

Question 8. Please confirm that you have tested to ensure that the PID rate exhibits and the Federal rates template, in this filing, and in the binder are all the same.

Answer 8. I confirm that I have tested for accuracy and consistency between the PID rate exhibits and Federal rates template, in both this filing and the binder.

Question 9. Please update the cover letter to correctly reference the corresponding binder.

Answer 9. I have updated the cover letter to correctly reference the corresponding binder number.

Question 10. Does data in Tables 2 and 4 include transitional business? If so, please provide total claims amount, the total premium and the number of transitional members.

Answer 10. Table 2 and 4 do not include transitional business, as KHPC has only offered ACA-compliant plans in this market segment.

Question 11. Table 3 proposes a 13.68% annual trend. What is the basis? Please provide data and analysis that supports this trend and the assumed 3% trend in capitation. Additionally, please provide the quantitative development of the trend factors shown in Exhibit E for Cost, Utilization, and Induced Utilization.

Answer 11. Pricing trend data is found in Q&A Exhibit 1.

Trend is calculated using:

- Vendor Physician Cost Model
- Internal Hospital Contracting Model
- Internal Prescription Drug Trend Model
- Medical utilization estimates reviewed by CBC's Chief Medical Officer

The medical cost models use best estimates of Capital BlueCross (CBC)'s future contracting increases with physicians and hospitals. The models use cost estimates based on varying contract effective dates by physician and hospital. All facilities and providers are considered in this modeling effort (i.e. acute and non-acute, network and non-network, inpatient and outpatient, in- area and out-of-area). From there, a monthly anticipated cost (assuming static

utilization) summary is produced which can be used in projecting future claims costs. Cost trends are determined at the CBC book of business level for all commercial business.

Contracting increases are adjusted for the following factors:

- **Intensity:** Intensity is defined as the amount of inputs used to provide each unit of service. This is the measure of additional trend for technological changes, moving from less to more expensive treatments (i.e. shift from x-rays to MRIs or more expensive pharmaceutical drug treatments).
- **Leveraging:** The trend model is based on allowed cost increases. Paid claims trend at a higher rate than allowed due to leveraging. Leveraging is the impact of static cost-share, such as deductibles, to the paid trend. The individual market offers high deductibles, with no offerings under a 1000 deductible, making leveraging significant. Leveraging can be seen in historical trend reports as described below and see in Exhibit 1a (difference between incurred and allowed trends).

Utilization trend takes into account the following considerations:

- **Historical Data:** Please refer to Q&A Exhibit 2a for CAAC Individual trend summary and Q&A Exhibit 1b for trend detail. Please note that most trend exhibits are using Individual CAAC PPO data. This is because KHPC HMO has changed significantly between 2016 and 2017. KHPC is no longer offering its narrow network plan, is no longer offering plans on-exchange, and is only offering bronze and catastrophic plans in 2017. These changes make the HMO trend data useless.
 - 19.6% allowed claims trend 2017 over 2016
 - 21.5% incurred claims trend 2017 over 2016
 - Utilization Trends 2017 over 2016:
 - IP 17.5%
 - OP 16.4%
 - Prof 14.0%
- **Hospital Inpatient Authorization Reports:** Please refer to Q&A Exhibit 1c for Individual (CAAC and KHPC) inpatient authorizations by month. CBC does not currently have this report split by CAAC PPO and KHPC HMO, so this data differs slightly from Exhibits 2a and 2b. Year-to-date (YTD) 2017 inpatient acute days/1000 are 28.6 percent higher than YTD 2016.
- **Special Enrollment Period (SEP) Enrollment:** The BCBSA estimates that SEP enrollees cost an average of 55% more than open enrollment period (OEP) enrollees.
- **Continuity of Care:** Care Management is more difficult for individuals without continuous health care coverage, resulting in higher than average utilization rates.
- **Induced Utilization:** Induced utilization is CBC's best estimate for increased utilization in the individual market due to unknown future regulatory changes. CBC predicts that consumers will use more services in 2018 due to unknown coverage status in 2019.

The Prescription Drug model considers the following trend components:

- Price Inflation
- Contract Pricing
- Member Cost-Sharing
- Units per Script
- Brand/Generic Mix
- Therapeutic Mix
- Cost per Script
- Utilization

Prescription drug trends are also adjusted for intensity and induced demand. Also, please see Q&A Exhibit 1d for historical prescription drug trend detail (CAAC and KHPC combined).

Question 12. Please provide the development of the morbidity factors shown in the URRT in Exhibit F and in Table 5.

Answer 12. The development of the morbidity factor is our best estimate of the increased morbidity due to rising premiums in the individual market. As premiums rise, as they did in 2017, healthier than average people tend to drop coverage, worsening the pool as a whole. The morbidity change is an estimate but we do have indications of a worsening risk pool. Please refer to Exhibit 1a and question 11 for early claims trend and utilization metrics 2017 over 2016.

Question 13. Please provide the development and explain the purpose of the 1.357 factor shown in the other projection factor in the URRT for “Other Medical” in Exhibit F. Specifically, please provide the development of the 1.35 and 1.005 factors separately and explain each factor’s purpose.

Answer 13. 1.35 factor in “Other Medical” is to adjust the base data to include pediatric dental and vision claims. Due to data constraints, the pediatric dental and vision claims are not included in the base data. Pediatric dental and vision is underwritten by CAAC, but embedded with medical/Rx products underwritten by CAAC, CAIC, and KHPC. Because of this, data is difficult to allocate to each company. I hope to be able to provide this data split by company in the near future. But for this filing the rate development is performed as follows:

- Pediatric Dental: The pediatric dental calculation is taken directly from CAAC Stand-Alone Dental Filing CABC-130539624. The per-child-per month rate from the filing is converted to a PMPM in an embedded plan, since every member pays, but only children receive the benefit.
- Pediatric Vision: Rating begins with starting cost and utilization by procedure code. Separate in-network and out-of-network cost and utilization are used in the rating methodology. Starting cost and utilization are then adjusted based on the selected plan designs. Utilization is adjusted based on the chosen benefit period (12 months), copay, and the maximum allowance levels. Starting cost is adjusted based on copays, coinsurance, and maximums. Final cost per service is calculated as the minimum of the max for that service category and the starting cost, minus the copay, and multiplied by the coinsurance. The per-child-per-month rate is converted to a PMPM in an embedded plan, since every member pays, but only children receive the benefit.

- Please note that this factor is an estimate of allowed claims. Incurred claims are estimated separately as described in the above bullets. The “Other Medical” factor in the URRT only impacts the allowed calculation, which ultimately impacts the paid-to-allowed ratio. Premiums are not impacted.

The 1.005 factor is the list-billed adjustment. This is the additional premium needed to account for families with more than 3 children. The calculation is as follows:

1. Gather member-level small group current month enrollment by subscriber ID and age. Small group data is used as a gauge for both market segments. Both small group and individual use the same list-billed adjustment.
2. Calculate CMS demo-units by subscriber without the maximum 3 children limit. Demo-units are member-count (by age) x CMS age curve factor.
3. Calculate CMS demo-units by subscriber with the maximum 3 children limit, using the ages of the three oldest children under 21.
4. Sum step 2 demo-units for the entire population.
5. Sum step 3 demo-units for the entire population.
6. Step 4 divided by step 5 is the list-billed adjustment.

The calculation of the list-billed adjustment is found on Q&A Exhibit 2.

Question 14. What is the basis for the paid to allowed ratio of .632 shown in Table 5 and Worksheet 1, Section III of the URR? Provide data and analysis that demonstrates that the ratio is consistent with membership projections by plan included in the URR Worksheet 2 and in Table 10. The ratio for each plan should be relatively consistent with the metallic AV for the plan to which you are pricing, however it is recognized that they may not be exactly the same due to differences between the issuer’s experience and the experience underlying the AV Calculator.

Answer 14. The development of the paid-to-allowed ratio is explained on pages 6 to 8 of the actuarial memorandum. Exhibit G shows the paid-to-allowed calculation.

Question 15. Please provide the requested information regarding the projection of paid claims used to determine the paid-to-allowed ratio in Exhibit G.

- a) Please provide an explanation for the build-up of the 0.83 benefit change factor.
 - i) Specifically, how was the \$336.22 for the “Average Manual Claim PMPM in Experience Period” determined?
 - ii) Please provide an explanation for the development of the plan Total PMPM amounts on the “PMPM” tab.
 - iii) Please explain the 0.9 factor applied to the Total PMPM for the Catastrophic plan shown in Exhibit L to get to the “Manual Medical + Rx PMPM.”

Answer 15.

- i) KHPC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000

per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a \$0 office visit copayment and a \$25 ER copayment. Given a particular benefit design (for example, \$20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on cumulative probability distributions (CPDs), where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments. This actuarial cost model derives a Manual Cost for each benefit design in the experience period. The member-month weighted average of the Manual Cost PMPMs equals “Average Manual Claim PMPM in Experience Period”.

- ii) The Total PMPM amounts are derived in the same manner as explained in i) above. Using the actuarial cost model, the Manual Cost PMPM is calculated for each of the benefits in the projection period.
- iii) Exhibit L has been corrected so that the catastrophic plan uses the Manual Cost PMPM from the “PMPM” tab for the “Manual Medical + Rx PMPM”. An additional adjustment was made to the catastrophic adjustment in order to appropriately adjust for catastrophic experience. All rates and other exhibits are being updated with this submission to reflect this change.

Question 16. In the taxes in fees section of your PA actuarial memorandum, number 5, you indicate that State Income Tax is included. Please remove and update all necessary documents and tables, if necessary.

Answer 16. As requested, I have removed State Income Tax from the rate development, actuarial memo, rates, and all other exhibits.

Question 17. In Table 6, the sum of cells C50 – C52, regarding administrative fees, does not equal cell C49 or the URRT. Please review and revise.

Answer 17. Table 6, cells C50-C52 have been updated to sum to C49.

Question 18. Please show the development of the average commission and circumstances in which broker commissions will be paid and if they will vary based on geographic location, metal level, plan, open enrollment vs. SEP enrollment, etc. Additionally, the current and 2018 broker agreements should be included and used to develop the percent shown in Table 6 as well as the associated PMPM.

Answer 18. KHPC pays commissions for renewal enrollment received during open enrollment, both on and off exchange, and in all geographic areas. Commission is less on catastrophic plans due to the lower premium. KHPC does not pay commission for SEP or new business. The 2018 broker commission schedule is yet to be finalized. Attached please find the 1/1/2017 copy of the broker agreement – redacted version. Files are as follows:

- a. Redacted Agent Agreement: “Ind_17-50_Initial_KHP_HMO_WBEBrokerIndRedacted_Supporting_20170626.pdf”
- b. Redacted Preferred Producer Master Agreement: “Ind_17-50_Initial_KHP_HMO_PPMABrokerIndRedacted_Supporting_20170626.pdf”

Please see Q&A Exhibit 3 for the calculation of the average broker commission. The projected 2018 broker commission is calculated based on proposed/best estimate broker payment levels. For rate development, the same broker PMPM is applied across all companies. The enrollment distribution between catastrophic and non-catastrophic plans includes CAAC, KHPC, and CAIC.

Question 19. Table 6, cell B54, indicates the PCORI fee is \$018. The 2018 PCORI PMPM amount should be \$0.20. Please revise. Also review the percent of premium in cell C54 to ensure the yielding amount is consistent with \$0.20.

Answer 19. I have updated the PCORI fee to \$0.20 PMPM.

Question 20. Please show development of the federal income tax in cell C56 of Table 6.

Answer 20. Federal income tax will be collected on the projected 2% profit/risk portion of the premium. That is, $0.35 \times 0.02 = 0.7\%$. State income tax previously included in this cell has been removed.

Question 21. Table 6 cell C63 indicates the Single Risk Pool PMPM is \$480.61, while the Single risk pool in the URRT in cell V43 indicates \$477.95. Please reconcile.

Answer 21. I have updated the URRT to match Table 6 Single Risk Pool PMPM.

Question 22. Please show the development of the Health Insurance Industry Fee of 3.78% as shown in Table 6 cell C57.

Answer 22. CBC’s finance department estimated our 2016 HIF fee to be 3.62%. The HIF assessment has risen from \$11.3 billion in 2016 to \$14.3 billion in 2018 (25% increase). If premiums, on average, have risen 20% in 2 years, the assessment needs to increase 5%. CBC trended the 3.62% at 4% over two years to arrive at 3.78%. The same HIF percentage is applied in rate development across all market segments.

Question 23. Please answer the following questions about the development of the risk adjustment transfer amount shown in Exhibit K:

- a) How was the statewide premium increase of 20% per year determined?
- b) How was the 0.80 factor to account for benefit changes in 2017 and 2018 determined?
- c) Please provide justification for using the statewide average premium in calculating the risk adjustment percentage instead of Capital’s own average premium.
- d) How are you accounting for the 2018 risk adjustment calculation change to remove the impact of administrative expenses? In other words, where is the adjustment to reduce the statewide average premium by 14%?

- e) Please explain and provide the development for the -1.5% adjustment for Market Improvement in Coding.
- f) Please explain and provide the development for the -2.0% adjustment for Internal Coding.
- g) Please explain and provide the development for the -10% adjustment for Change in AV.

Answer 23.

- a) The 20% average annual premium increase, is intended to represent anticipated increases due to allowance trend of roughly 5% - 8%, leveraging of roughly 3% - 5%, and another 10% for the impact of uncertainty of appropriate market competition coupled with significant selection issues in the Individual market. Also, with several years of history behind us, PA has seen significant rate increases in the Individual market. Since the aggregate 20% is truly an unknown, as it is impacted by things outside of CBC control, the estimate delivered was reviewed for reasonability and was deemed appropriate.
- b) The .80 benefit change factor is intended to represent the potential for significant buydowns that are typical when rate increases of 20% are projected. Ultimately, on a combined basis, the 20% mentioned in (a) above coupled with the .80 benefit change factor yields an average per annum of 7.33%.
- c) Since the statewide average premiums are normalized for AV of the state, then carrier specific AV applied back to get to an AV adjusted carrier premium, there is a need for an estimate of both the statewide AV as well as the carrier specific AV. Speculating that the state AV and the carrier AV are markedly different requires knowledge that we don't currently possess since history is limited. Since at the time of filing 2016 was still unknown, speculating what will occur in 2016, 2017 and ultimately 2018 requires simplifying assumptions. One of those simplifying assumptions is that the statewide AV, GCF and other complex components of the RA payment transfer formula are identical and remain unchanged.
- d) Similar to c) above, there is so much uncertainty in anticipating 2016 RA payment transfers as of the time of filing, exacerbating the difficulty in estimating 2018. While it is reasonable to think that the 14% administrative expense reduction mentioned in statutory guidance will have an impact, all of the moving parts of the RA payment transfer formula along with market and regulatory dynamics make speculation of impact a challenge for industry actuaries. Ultimately, after all of the assumptions are applied to the formula, total net impact was seen to be within a reasonable level of expectation, so the 14% AE was implicit and not explicitly stated.
- e) Capital BlueCross is a small plan with limited resources. The industry has commercially available services to improve coding efforts through exhaustive use of data and provider outreach programs. While CBC is engaged in the efforts of accurate, timely submission of RA data, we feel that the industry will outpace CBC in its ability to maximize value.
- f) Internal coding represents the fact that CBC's individual ACA book of business has had a churn rate that has made a multi-year perspective of member diagnosis and risk impossible. As of 2015, CBC had roughly 5,000 members in Individual ACA business. As of 2016, CBC had 70,000 members. In 2017, 50% of CBC Individual ACA business dropped coverage, and CBC gained roughly 30,000 new members. This places CBC at a disadvantage in terms of ability to assess a member's

Question 24. It appears the 7.5% rate increase does not include the impact of changes to the age factor slope or plan changes (i.e., mapping members from terminated plans to new or existing plans).

- a) If that is correct, please provide a rate increase calculation showing an itemized build-up accounting for these two items.
- b) If the 7.5% increase already includes these items, please provide an itemized build-up of the 7.5% including the two items listed.

Answer 24. The increase does include mapping, but KHPC is not mapping any members from 2017 to 2018. The increase does not include the impact of changes to the age curve. The change in age curve adds 1.9% to the rate increase.

Question 25. Please indicate if the pricing AVs shown in Exhibit L, row 26, include induced demand.

- a) If induced utilization is included, please provide the induced utilization amount for each plan as well as an explanation about how the amount was determined.
- b) If induced utilization is not included, please provide an explanation for where in the rate calculation it is included and an explanation about how the amount was determined.

Answer 25. Induced demand is not included to the pricing AVs. It is not a factor in this filing because KHPC is only offering bronze and catastrophic plans. Bronze and catastrophic plans have similar/same induced demand, so a factor is not applied at the plan level because normalization would make the net impact zero.

Question 26. Please provide an explanation for the significant difference in the Metal AVs in Exhibit A1 and the pricing AVs in Exhibit L.

Answer 26. The metal AVs and pricing AVs have some differences. There are several reasons why plan premiums may not be proportional to AV Pricing Values.

- KHPC does not use the AV Calculator as a pricing model
 - The AV Calculator is a nationwide model designed to provide a consistent and explainable process for determining benefits. It is not designed to be a region-specific pricing model
 - KHPC uses a vendor pricing model calibrated to Capital BlueCross (CBC) data. The actuarial model is explained in the Actuarial Memorandum under the Plan Adjusted Index Rate section.

KHPC has 2016 risk-adjusted results on Q&A Exhibit 3. Note that the paid-to-allowed ratio on bronze is higher than standard AV.

Question 27. In the supporting Excel exhibits, Exhibit A1 lists plan designs which are not proposed in 2018. Please update this exhibit as well as the actuarial memorandum.

Answer 27. Exhibit A1 is updated to only include plans offered by KHPC in 2018. The actuarial memo lists the correct number of plans.

Question 28. On page 14 of the 2018 Guidance, the department requested data regarding the development of the Pricing Avs in Table 10. Please provide this data in Excel.

Answer 28. The development of pricing AVs is found in Q&A Exhibit 5.

Question 29. Please provide the development for the catastrophic adjustment of 0.6.

Answer 29. The catastrophic adjustment is an estimate taken from the 2017 filing. The goal of the adjustment is to get to a premium relativity close to last year. Early 2017 results show catastrophic performing better than 40% below bronze. But it is difficult to gauge the impact of risk adjustment. With the 2017 premium increases, it is likely that higher risk consumers purchased bronze plans, which could reverse the ultimate risk-adjusted bronze results, and catastrophic-to-bronze relativity. For this reason, KHP did not make the catastrophic adjustment less than 0.60.

Question 30. Please provide the development for the tobacco surcharge adjustment of 0.994.

Answer 30. Please see Exhibit 6 for the development of the tobacco surcharge using current month individual enrollment by tobacco status.

Question 31. In Table 14, you have proposed changes to your geographic factors for rating areas 7 and 9. Please provide analysis of the data in exhibit Q in your supporting Excel exhibits. Explain and show the development of columns C, E, F, G and J in this exhibit.

Additionally:

- a) Please provide an explanation for how the impact of morbidity differences between regions was removed when developing the geographic factors.
- b) Please provide information on the development of the Contracted Increase values; specifically the wide variance of the factors even within a region.
- c) Please provide additional explanation around the magnitude and direction of the geographic factor changes as compared with the 2017 factors.

Answer 31. CMS has approved nine geographical rating areas (GRA) in the state of Pennsylvania. CAAC operates in a 21-county area of Pennsylvania, encompassing three of the nine defined regions. CAAC performed regional analysis to quantify the cost difference between the three regions in our service area. The analysis gathered allowed claims for the 2016 calendar year by region, normalized for demographics/risk. Demographics were normalized by gathering demo-units for the CY 2016. Demo-units are Milliman Health Cost Guidelines demographic factors x member-months. So demo-units divided by member-months is the average demographic factor in this population. The 2016 experience was adjusted for future contracting changes in order to project results to 2018. We then compared the claim cost for each of the three regions, and calculated cost differentials between the regions, mostly due to differences in hospital contracting between regions.

- a) In credible populations, normalizing for demographics is synonymous with normalizing for risk/morbidity. The claim PMPMS by county are normalized for demographics.
- b) The contracted increases come from CBC's provider contracting area. Provider contracting provides actuarial with contracted hospital and physician increases in 2017 and 2018. These increases are used to adjust claims by county from the 2016 base experience period to the 2018 projection period. The calculation is found in Q&A Exhibits 7a-7c.
 - a. Exhibit 7a: Summary of increases two-year contracted increases by hospital, also summarized by county.
 - i. Note that Hershey hospital contracted increase of 18% was mitigated to 10% in order mitigate further adverse impact to region 9. Hershey handles severe cases and patients come from all regions to be treated, so the cost is distributed across all regions.
 - b. Exhibit 7b: Provider contracting IP hospital contracting increases by month
 - c. Exhibit 7c: Provider contracting OP hospital contracting increases by month
 - d. For this exercise, professional contracting increases were assumed to be the same across all providers/counties.
- c) CBC has seen a change in the experience attributed to region 9 as well as future contracted increases in relation to region 6 and 7. Pinnacle accounts for a large portion of region 9 claims and their 2-year contracted increase of 21% is significant in comparison to the average.

Question 32. What is the basis for the Pediatric Dental and Pediatric Vision claims PMPMs? Are these services capitated?

Answer 32. Pediatric dental and vision services are not capitated. But due to data constraints, the pediatric dental and vision claims are not included in the base data. Pediatric dental and vision is underwritten by CAAC, but embedded with medical/Rx products underwritten by CAAC, CAIC, and KHPC. Because of this, data is difficult to allocate to each company. I hope to be able to provide this data split by company in the near future. But for this filing the rate development is performed as follows:

- Pediatric Dental: The pediatric dental calculation is taken directly from CAAC Stand-Alone Dental Filing CABC-130539624. The per-child-per month rate from the filing is converted to a PMPM in an embedded plan, since every member pays, but only children receive the benefit.
- Pediatric Vision: Rating begins with starting cost and utilization by procedure code. Separate in-network and out-of-network cost and utilization are used in the rating methodology. Starting cost and utilization are then adjusted based on the selected plan designs. Utilization is adjusted based on the chosen benefit period (12 months), copay, and the maximum allowance levels. Starting cost is adjusted based on copays, coinsurance, and maximums. Final cost per service is calculated as the minimum of the max for that service category and the starting cost, minus the copay, and multiplied by the coinsurance. The per-child-per-month rate is converted to a PMPM in an embedded plan, since every member pays, but only children receive the benefit.

Question 33. This filing proposes 2 plans, however, an AV screenshot has only been provided for the Bronze plan and not the Catastrophic plan. Please provide.

Answer 33. Page 2 of the AV screenshots shows the catastrophic plan.

If you have any further questions regarding this filing, please call me at [REDACTED] (or via email at [REDACTED])

[REDACTED] Thank you for your assistance in this matter.

Sincerely,

[REDACTED]

KEYSTONE HEALTH PLAN CENTRAL, INC.

Question and Answer Individual Rates Effective January 1, 2018

With this response, please find corresponding Q&A Exhibits in “Ind_17-50_Initial_KHP_HMO_Q&AExhibits2_Supporting_20170714.xlsm”

Question 1. In response to question 11, you have indicated that changes to the HMO product offering render the HMO historical data useless. However, Table 4b has not been populated with manual claims. Please populate this Table and provide narrative regarding adjustments made to the manual data to reflect the HMO product and the current and expected enrolled population. The narrative and data provided does not support why the proposed 13.68% annual trend is appropriate for KHPC. Additionally, please ensure that all supporting data is provided within this submission and does not reference external data.

Answer 1. While the change in network and benefits from 2016 to 2017 makes trend data difficult to decipher, it is the best data we have to use in rate development. PPO trends are helpful to determine annual utilization and morbidity changes in the market, because the network and product offering stayed fairly consistent between 2016 and 2017. But KHPC’s HMO has historically attracted lower risk than PPO (low claims, high RA payout), which is a better starting point for projecting 2018 HMO Bronze and Catastrophic plans (that would tend to also attract healthier individuals) than any other data available to CBC.

Question 2. In response to Answer 11, please provide quantitative support for the induced utilization assumption of 3% annually and leveraging of 2.5% annually considering the projected decrease in the average paid-to-allowed ratio from 2016 to 2018.

Answer 2. Please see Q&A Exhibit 1 for Individual PPO trend data used to estimate adjustments to trend. As explained in Answer 1 above, PPO is the most stable data CBC has in the individual market when comparing 2017 over 2016. While PPO claim PMPMs are not good indicators for HMO experience, the trend in PPO claims is a reliable indicator for the individual market as a whole.

Note that 2017 over 2016 utilization/1000 increases are significantly higher than the 3 percent induced demand adjustment. It is difficult to distinguish between utilization changes and morbidity changes. In total, the pricing trend is 13.3% (including induced demand of 3%). The combination of the morbidity adjustment (discussed further in answer 3 below) and induced demand adjustment is still below 2017 over 2016 incurred trend.

2017 over 2016 allowed trend is 19.6% and incurred trend is 20.5% - a difference of 1.9%. As deductibles and other cost-sharing increases 2018 over 2017, we expect leveraging to grow. So the estimated impact of leveraging is 2.5%.

Please note that the difference in paid-to-allowed ratio between 2016 and 2018 is accounted for separately (outside of trend) in rate development. Differences in benefits between the BEP and projection period are handled in the Exhibit D (Benefit Mix). This calculation measures the average manual cost in the BEP and the projected manual cost in the projection period and adjusts claim projections accordingly.

Question 3. Table 10 indicates all 3,011 of the current covered lives are mapped to the two plans being offered in 2018. Please reconcile this with the list of terminated plans shown in Exhibit R and the response to Questions 24 that indicates KHPC is not mapping any members. Why does Table 10 not include a list of the terminated plans showing their current membership?

Answer 3. The terminated plans in Exhibit R are a list of plans that terminated in 2016. These are plans included in the URRT as they have experience in the base experience period. But they were not available in 2017 and will not be available in 2018. There are no plans terminating in 2017.

Question 4. Please reconcile the 1.35 “Other Medical” factor described in Answer 13 to the Exhibit C information, which lists the paid claims for pediatric dental and vision to be a combined \$4.08.

Answer 4. The other medical factor is applied to the URRT to estimate the allowed pediatric dental and vision amounts. Q&A Exhibit 2 shows the impact of the Other Medical factor. Please note that this factor has no impact on the final rates – it is only an estimate of allowed. Incurred claims used in rating are developed separately.

Please also note with this submission, I have corrected an error made on the pediatric dental and vision projected incurred claims PMPM. The pediatric dental incurred claim PMPM now matches the 2018 CAAC stand-alone pediatric dental filing CABC-131022099. And the pediatric vision projected incurred claims PMPM is updated to correctly adjust for the current distribution of members under age 19. Both calculations are also included in Q&A Exhibit 2.

Question 5. Please explain why the “list-billed adjustment” outlined in Answer 13 is listed as 1.005 but the calculation in Exhibit2 shows 1.006. Additionally, please explain why 1.005 is used in the rate development (for example, Exhibits F and G).

Answer 5. The list-billed adjustment of 1.005 is an estimate based on data compiled for the 2017 filings. The calculation uses small group data to estimate the impact of families with more than 3 children, and that calculation is used for all filings in both the individual and small group market. Current month small group data, submitted with the last Q&A, shows a slightly higher calculated factor of 1.006. CBC has maintained the 1.005 factor despite the slight calculated change in the most recent data.

Question 6. Please explain why the “Average Manual Claim PMPM in Experience Period” in Exhibit D is backed into by dividing by a hard-coded factor of 0.83. Why do you not use a calculated PMPM from the pricing model, as described in Answer 15(i)?

Answer 6. For this filing, the benefit mix adjustment was approached differently from other CBC filings. The BEP contained a mix of benefits and plans with both a broad and narrow network. In order to calculate the benefit mix change from the BEP to the projection period, we calculated the average benefit in the BEP using AV (manual cost was not run on each of the plans, but AV is a good approximate when working with relativities). We also calculated the average network factor – member weighted based on enrollment in a broad network plan or value network plan. The average value of the network was calculated using a weighted-average of the following:

- a. Network factors developed for 2017 HMO Individual Filing
- b. Realized network factor developed by analyzing Value versus Broad network results (adjusted for RA).
- c. Weighted 40% a. and 60% b.

The benefit change adjustment is the average AV in the projection period divided by the average AV (adjusted by network) in the BEP. The adjustment is 0.83, which is applied in Exhibit D cell E8.

The calculation is found on Q&A Exhibit 3.

Question 7. The response to Question 15(iii) indicates a correction was made to Exhibit L regarding the Catastrophic PMPM development; please explain where the change was made as the prior version of Exhibit L (from May 22, 2017) is identical until the retention calculations.

Answer 7. You are correct that the last submission did not contain the change I listed in Question 15 (iii). I have corrected Exhibit L so that the catastrophic plan used the manual cost PMPM from the PMPMs tab. I have also adjusted the Exhibit L, cell C38, to adjust RA for the catastrophic adjustment. Rates and other exhibits have been updated to reflect the changes made in Exhibit L.

Question 8. Please reconcile the updated Table 6 Retention information in cells C50:C52 with the values developed in Exhibit H as they no longer tie.

Answer 8. Exhibit H calculates the aggregate retention as a percent of premium based on projected member-weighted premium averages. Table 6 uses current month member-weighted premium averages. Because projected membership distribution differs from current month, the two calculations will not tie.

Question 9. Please answer the following questions about risk adjustment and the responses to Question 23:

- a) The 0.860 statewide average premium adjustment is intended to remove administrative costs from the statewide average premium utilized in the risk adjustment transfer calculation. This factor should be included in the calculation as a multiplication to the statewide premium amount as outlined in the 2018 Notice of Benefit and Payment Parameters. Please update your calculation to include this adjustment.

- b) Please provide more explanation for the -1.5% adjustment that accounts for “Market Improvement in Coding.” According to the response to Question 23(e) the assumption is that the market will be able to improve their coding at a quicker pace relative to KHPC which, all else equal, would increase KHPC’s risk adjustment payment. However, the way the adjustment is applied results in a decrease of KHPC’s risk adjustment payment; please explain this discrepancy.
- c) Please complete/provide the answers to Questions 23 (f) and (g) as it appears they were cut off.
- d) If you wish to make adjustments to the projected RA amount included in this rate submission and the URRT, based on the June 30, 2017 Summary Report on Transitional Reinsurance Payments and Permanent Risk Adjustment Transfers, please do so. Provide narrative and an Excel spreadsheet demonstrating the development and assumptions.

Answer 9.

- a) The 0.86 adjustment is now explicitly reflected in the RA projection calculation in Exhibit K. Please note, as explained in the first Q&A Answer 13d, the application of 0.86 was implicit to the original calculation as there are numerous moving parts to projecting RA. The projected 2018 statewide average premium is the same as the original submission.
- b) You are correct that this factor was not applied correctly. I have made an adjustment to Exhibit K. But please note that the final projected RA PMPM is CBC’s best estimate, so we do not intend to change that estimate with this correction. In order to adjust for this, I have revised the AV adjustment described below.
- c) The complete answers are as follows:
 - a. Part f) is as follows: Internal coding represents the fact that CBC’s individual ACA book of business has had a churn rate that has made a multi-year perspective of member diagnosis and risk impossible. As of 2015, CBC had roughly 5,000 members in Individual ACA business. As of 2016, CBC had 70,000 members. In 2017, 50% of CBC Individual ACA business dropped coverage, and CBC gained roughly 30,000 new members. This places CBC at a disadvantage in terms of ability to assess a member’s risk. Since risk adjustment, closing gaps in care and coding, and a myriad of other risk adjustment functions require more than a single year of data to facilitate an accurate depiction of risk, it is believe that CBC is disadvantaged in the market. The amount is ultimately unknown, but it is estimated that it will have an unfavorable impact. 2% was reviewed for reasonability and was deemed appropriate.
 - i. Please note that as described in b) above, this factor was also not applied correctly. I have made an adjustment to Exhibit K, but the final RA PMPM is staying the same.
 - b. Part g) The -10% (changed to -17%) adjustment for change in AV is to reflect a lower RA PMPM in 2018 given that KHPC is only offering Bronze and Catastrophic plans. Most 2016 enrollees purchased Silver plans. The 17% is an estimated impact of moving from Silver AV to Bronze/Catastrophic AV.
- d) CBC will not adjust the projected RA amount based on the June 30, 2017 report.

Question 10. Please provide an itemized build-up of the 6.5% rate change (4.6% provided + 1.9% due to the age slope change) as previously requested. This will likely include items such as trend, morbidity, and benefit changes.

Answer 10. The components of the rate change are found on Table 8 of PA Rate Template Part II. Table 10 shows 4.9% increase, and it is estimated that 1.9% in additional premium can be attributed to the change in CMS age curve. And an additional 3.2% is attributable to change in regional rating factors. The sum of the components is very close to that on line H. of Table 8.

Question 11. Please provide a quantitative development for the 0.6 catastrophic adjustment factor. This quantitative development should show how the 0.6 accounts for the cost difference between the catastrophic and non-catastrophic members which is not captured by the age slope.

Answer 11. Data to support the catastrophic adjustment is found on Q&A Exhibit 4. Please note that with other changes in this submission (see Answer 7 above), I have revised the catastrophic adjustment to 0.58. The data in Q&A Exhibit 4 would support an even lower adjustment. But CBC has not implemented the full adjustment into rating. The market is factored into CBC's decision to keep the factor at 0.58. While most competitors do not offer both a Bronze and Catastrophic plan in 2017, UPMC is one competitor CBC could reference in making this pricing decision. UPMC's relativity between Bronze and Catastrophic is 0.87. And historically, CBC has had the lowest Catastrophic rate in the market. The combination of data and market intelligence has driven the decision to apply a factor of 0.58.

Question 12. The following questions are in response to Answer 31:

- a) Please provide an explanation for how the impact of large claims was removed in the development of the geographic factors.
- b) Please provide an explanation for how the allowed amounts in Exhibit Q (\$290 million), which represent calendar year 2016 data based on your response, compare to the allowed amount in Table 2 (\$156 million), which also represent calendar year 2016 data.

Answer 12.

- a) Large claims were not removed from the analysis. For this analysis, a credible population was used to compare results across regions (see answer b) below). CBC does not expect large claims to distort cost differences when compiling data at the regional level. Additionally, as was explained in the June Q&A, the analysis tempered the impact of Hershey Medical Center, so not to skew region 9 results, since Hershey is a unique treatment facility that handles high-cost, complicated procedures for patients who reside in all counties. Additionally, large claims drive cost differences between providers, so CBC deemed it appropriate to keep large claims in the analysis.
- b) The regional analysis was preformed using CBC's Small Group and MidMarket data. MidMarket is defined as groups with less than 100 employees. The combined market data in Exhibit Q is medical only, while Table 2 is medical and Rx small group data. The combined market data was used to gain credibility at the regional level. Also, these market segments do not experience the same volatility as the individual market, further adding credibility. The factors derived from the calculation are used in all filings in both market segments.

Question 13. Please ensure that all revisions are reflected in this resubmission.

Answer 13. I have checked the exhibits and memos for consistency and accuracy, including all revisions noted in this Q&A.

Question 14. Please provide a PDF file for public review (Public Rate Filing PDF) in SERFF to show the updated rate request. The following updated supporting items must be included:

- Cover Letter
- Rate Change Request Summary (Attachment 1)
- Part 1 - Unified Rate Review Template (URRT)
- Part II – Consumer Friendly Justification
- Part III – Federal Actuarial Memorandum (redacted)
- PA Actuarial Memorandum (redacted)
- PA Actuarial Memorandum Rate Exhibits
- PA Plan Design Summary and Rate Tables
- Federal Rates Templates
- Service Area Maps
- Correspondence – Q&A's

Answer 14. I have included the Public Rate Filing PDF with this submission.

If you have any further questions regarding this filing, please call me at [REDACTED] (or via email at [REDACTED])

[REDACTED] Thank you for your assistance in this matter.

Sincerely,

[REDACTED]
