**Re:** Keystone Health Plan Central

Individual Rates Filing No 18-11

TOI Code: H15I Individual Health – Hospital/Surgical/Medical Expense

Sub-TOI Code: H15I.001 - Hospital/Surgical/Medical Expense

Filing Type: Rate

Dear :

By this filing Capital BlueCross, on behalf of its wholly owned subsidiary Keystone Health Plan Central, submits to the Department its Individual Rates effective January 1, 2019.

The following is a summary of the rate filing:

- Company Name: Keystone Health Plan Central (KHPC)
- NAIC: 95199
- Market: Individual
- On/Off Exchange: Off Exchange
- Effective Date: 1/1/2019
- Average Rate Change Requested: -5.7%
- Range of Requested Rate Change: -8.3% to 6.7%
- Total additional annual revenue generated from the proposed rate change: \$(788,441)
- Product: HMO
- Rating Areas: 6,7,9
- Metal Levels: Bronze, Catastrophic
- Current Covered Lives and Policyholders: 2,043/1,452
- 2019 Number of Plans: 2
- 2018 Number of Plans and Percent Change: 2/0%
- Contract Form #: KHPC-Ind-HMO-21cnty-AGRMT-v0119
- Form Filing SERFF #: CABC-131453908
- Binder SERFF #: CABC-PA19-125079437
- HIOS Issuer ID: 53789
- HIOS Submission Tracking Number: 53789-1217515730619118596

Please note that per instructions from the Insurance Department, 0.06 was added to the morbidity factor to account for the possible repeal of the individual mandate.

In support of this filing, I have included an Actuarial Memorandum with supporting exhibits, URRT, Consumer Friendly Justification, Rates Table Template, Rate Change Request Summary, and PA Plan Design Summary and Rate Tables.

If you have any questions regarding this filing, please call me at the control of	ail at
or at	
). Thank you for your assistance in this matter.

# **Attachment I**

# Rate Change Summary

# **Keystone Health Plan Central (KHPC) – Individual Plans**

Rate request filing ID # CABC-131454728 - This document is prepared by the insurance company submitting the rate filing as a consumer tool to help explain the rate filing. It is not intended to describe or include all factors or information considered in the review process. For more information, see the filing at

http://www.insurance.pa.gov/Consumers/ACARelatedFilings/

# **Overview**

Initial requested average rate change: -6.2%<sup>1</sup>
Revised requested average rate change: -7.3%

Range of requested rate change: -9.9% to 5.4% Effective date: 1/1/2019
People impacted: 2,043

Available in: Rating Area 6, Rating Area 7 and Rating Area 9

# **Key information**

# Jan. 2017-Dec. 2017 financial experience

Company made (after taxes)	\$9,898,686
Taxes & fees	\$ (8,149,809)
Administrative expenses	\$ 1,323,452
Claims	\$ 6,618,197
Premiums	\$ 9,690,526

### How it plans to spend your premium

This is how the insurance company plans to spend the premium it collects in 2019:

 Claims:
 86.95%

 Administrative:
 10.63%

 Taxes & fees:
 0.42%

 Profit:
 2.0%

The company expects its annual medical costs to increase **9.15%**.

# **Explanation of requested rate change**

Stabilization of the Individual market in recent years Suspension of the Health Insurer Fee in 2019 Anticipated increase in facility and physician unit costs Anticipated changes in prescription drug unit costs Continuing change in utilization

<sup>&</sup>lt;sup>1</sup> Note that insurers will have the opportunity to revise their rate change request in July, after they are scheduled to receive updated information about the impact of a federal program called risk adjustment. This document will be updated accordingly at that time.

# **Scope and Purpose**

By this filing, Keystone Health Plan Central (KHPC), a subsidiary of Capital BlueCross (CBC), submits rates for products to be made available to individuals on and after January 1, 2019. KHPC will offer individual products off the federally-facilitated exchange.

# **Rate History and Proposed Variations in Rate Changes**

Market	Company	Effective Date	SERFF#	Annual Increase
Individual	KHPC	1/1/2015	CABC-129635491	-8.00%
Individual	KHPC	1/1/2016	CABC-130076965	1.40%
Individual	KHPC	1/1/2017	CABC-130539563	55.10%
Individual	KHPC	1/1/2018	CABC-13102203	9.20%

# **Average Rate Change**

KHPC is proposing an aggregate annual 7.3% rate decrease. The rate change does vary by plan. The rate change is calculated in PA Rate Template Part III, Table 10, cell AC15.

### **Regulatory Considerations**

Rates submitted by this filing assume changes to the current regulatory framework. As directed by the Insurance Department, the following factors have been applied to the rates for regulatory changes:

• Individual Mandate: 0.06 added to the morbidity factor.

# **Membership**

Membership is shown in PA Rate Template Part I, Table 1. The average age is 34.

# **Benefit Changes 2018-2019**

A summary of proposed 2019 benefits is included in Exhibit A.

There are several benefit changes being implemented in 2018. All benefit changes comply with the uniform modification of coverage standards described in 45 CFR 147.106(e). Any plan with a benefit change that did not meet the uniform modification of coverage standard was terminated, and

a new plan was created in its place. Benefit changes by plan are listed in Exhibit B, highlighted in yellow.

# **Experience Period Premium and Claims**

**Single Risk Pool**: The data used to develop rates and shown in the URRT abides by 45 CFR part 156.80(d) single risk pool requirements. The single risk pool reflects all covered lives for every non-grandfathered product/plan combination for KHPC in the individual market. The single risk pool includes transitional products/plans for purposes of base rate experience.

**Base Experience Period**: The base experience period (BEP) includes completed fee-for-service paid and incurred claims for dates of service between January 1, 2017 and December 31, 2017.

Paid Through Date: Claims in the BEP are paid through March 31, 2018

**Premiums** (net of MLR Rebate) in BEP: Premiums are calculated on an earned basis in the BEP. MLR rebate adjustments are equal to zero as KHPC does not expect to refund any MLR rebates in the BEP.

### Allowed and Incurred Claims in BEP:

- Allowed claims are developed by combining paid claims with member cost-sharing.
   Allowed claims meet the definition in the URR instructions. They do not include provider quality incentive payments.
- Incurred claims are net of HHS CSR payments.
- CBC only covers Essential Health benefits (EHBs).
- KHPC does not include capitated services.
- Allowed and Incurred claims are net of pharmacy rebates. BEP rebates are completed based on actual utilization of rebate-eligible drugs and rebate amounts.

**Estimated Incurred but Not Paid Claims**: Paid claims by date of service come directly from CBC's data warehouse. The method for calculating incurred claims in the BEP is as follows:

- 1. Historical fee-for-service claims are viewed by date of service and date of payment in a claims triangle.
- 2. The claims triangle payments are then accumulated by date of service to develop factors that represent the rate of accumulation or rate of "completion".
- 3. Historical rates of completion by duration are used to derive projected rates of completion. Some of the methods used to develop projected completion factors are averages (e.g. harmonic averages, time weighted averages, geometric averages) and regression methods. Numerous items are considered when viewing these averages or regression statistics, such as the impact of high claims on perceived completion patterns.
- 4. For durations that exhibit a projected completion factor greater than the Valuation Actuary's chosen threshold (e.g. 80% complete), cumulative paid and incurred claims are divided by the projected completion factor to arrive at ultimate incurred claims. For durations that are less than the chosen threshold, a projection methodology is used. Similar

- to completion factor development, projection methodologies are worthy of a lengthy discussion. In general, an ultimate incurred claims PMPM is derived by projecting a recent 12-month period to the current month(s) and seasonally adjusting.
- 5. With all months having both a cumulative paid amount and an estimated ultimate incurred amount, the completion factors used in pricing are calculated by taking the quotient of the two. Allowed completion and incurred completion are assumed to be identical.
- 6. Both allowed and paid claims in the BEP are completed by applying completion factors by incurred month developed in Step 6.

$$BEP\ Incurred\ Claims\ =\ \sum \frac{BEP\ Paid\ Claims\ by\ Incurred\ Month}{Completion\ by\ Incurred\ Month}$$

BEP Allowed Claims

$$= \sum \frac{\textit{BEP Paid Claims} + \textit{BEP Member Cost Share by Incurred Month}}{\textit{Completion by Incurred Month}}$$

**Risk Adjustment in BEP**: Risk adjustment amounts in the BEP are equal to those reported by the Department on 5/9/2018.

**Loss Ratio in BEP:** Loss ratio is 145.03%

# **Credibility of Data**

No Credibility Manual was used.

# **Trend Identification**

Trend: 11.3%

Trend levels reflect CBC's best estimate of changes in utilization, provider reimbursement contracts, the network of facilities and providers, disease management initiatives and the impact of utilization management.

The following is a description of considerations used to determine trend.

- 1. Base Cost/ Change in hospital and physician contracting: The contracted increase in reimbursements to hospitals and physicians is the basis of cost trends. CBC uses the following to project future costs:
  - a. Vendor Physician Cost Model and Internal Hospital Contracting Model
    - i. The medical cost models use best estimates of Capital BlueCross (CBC)'s future contracting increases with physicians and hospitals. The models use cost estimates based on varying contract effective dates by physician and hospital. All facilities and providers are considered in this modeling effort (i.e. acute and non-acute, network and non-network, inpatient and outpatient, in- area and out-of-area). From there, a monthly anticipated

cost (assuming static utilization) summary is produced which can be used in projecting future claims costs. Cost trends are determined at the CBC book of business level for all commercial business.

- b. Internal Prescription Drug Trend Model
  - i. Price Inflation
  - ii. Contract Pricing
  - iii. Member Cost-Sharing
  - iv. Units per Script
  - v. Brand/Generic Mix
  - vi. Therapeutic Mix
  - vii. Cost per Script
- 2. Utilization Considerations:
  - a. Intensity of medical services rendered
  - b. Changes in place of service (e.g. continued migration of inpatient stays to outpatient setting)
  - c. Further migration from brand prescription drugs to generic prescription drugs
  - d. Favorable impacts of value based benefits designs
  - e. Induced Utilization: Induced utilization is CBC's best estimate for increased utilization in the individual market due to unknown future regulatory changes. CBC predicts that consumers will use more services in 2019 due to unknown coverage status in 2020.
  - f. Medical utilization estimates reviewed by CBC's Chief Medical Officer
- 3. Leveraging: The trend model is based on allowed cost increases. Paid claims trend at a higher rate than allowed due to leveraging. Leveraging is the impact of static cost-share, such as deductibles, to the paid trend. Estimated leveraging is calculated in Exhibit E1.
  - Estimated costs are based on average plan benefit value in the month, calculated using CBC's internal benefit model.
  - o CBC expects the average benefit level in 2019 to be similar to current month, 201803.
  - As of 201803, on average, Individual members pay 44.8% of costs, while CBC pays 55.2%. So for example,
    - \$2,000 in annual allowed claims results in member pay = \$896, and CBC pay = \$1,104.
    - \$2,000 trends at 5.5% = \$2,110
    - Member pay is fixed at \$896
    - CBC pay = 2,110 896 = \$1,214
    - Total CBC trend = 1,214/1,104 1 = 10%
  - With an allowed trend of 5.5%, and static cost-share, leveraging will add an additional 4.5% to trend.
- 4. Intensity: Intensity is defined as the amount of inputs used to provide each unit of service. This can best be seen in an example:

Year 2018

Type of Service	<u>Units</u>	Cost per Unit
X-Ray	1	\$200
MRI	1	\$5,000
Total	2	\$5,200

Year 2019

Type of Service	<u>Units</u>	Cost per Unit
X-Ray	0	\$200
MRI	2	\$5,000
Total	2	\$10,000

Total Annual Trend 92
-----------------------

5. Underwriting Cycle: The underwriting cycle is defined as the tendency to swing between profitable and unprofitable periods over time. The underwriting cycle is exacerbated partly by pricing performed with incomplete information as to the level of current experience trends. A reaction delay occurs, as carriers tend to rely on measurements of past experience in developing current pricing assumptions. As a result, carriers are often increasing their pricing trends when actual experience trends have begun to decline, and decreasing their pricing trends actual trends are increasing. KHPC strives to mitigate the underwriting cycle by keeping trends consistent through times of increasing and decreasing claim cost and utilization.

**Historical Experience:** Historical experience was not used to the develop trend.

**Benefit Categories**: Claims in the benefit categories displayed in the URRT come directly from CBC's data warehouse. These same categories are used to develop category-level trend. See Exhibit C for a description of benefits by benefit category.

See Exhibit E for KHPC's pricing trend, as well as cost and utilization components of the pricing trend.

# **Rate Development & Change**

# **Projection Factors**

**Changes in Morbidity:** Found in URRT Worksheet 1, "Pop'l risk Morbidity", and PA Rate Template Table 5.

The changes to morbidity incorporate both the Department's Individual Mandate factor discussed above, and changes to the population going from Bronze and Catastrophic experience to Catastrophic in the projection period. The additional morbidity change factor calculated in Exhibit F.

Changes in Benefits: Benefit changes are not applied to allowed claims as allowed should stay consistent from 2017 to 2019. Benefit changes are applied in the development of future incurred claims, due to changes in member cost-share. This calculation is shown in Exhibit D, and applied in Exhibit G. The manual cost PMPMs are developed from CBC's internal benefit relativity model, discussed in the Plan Adjusted Index Rate section below. The benefit change is equal to member-month weighted average projected manual PMPM divided by member-month weighted average manual PMPM in the BEP. This process is further discussed in the Paid-to-Allowed section below.

**Changes in Demographics:** KHPC does not expect changes in demographics in its individual population.

**Changes in Network:** No network adjustment is applied.

**Other Adjustments:** No other adjustment is applied.

Benefits, Demographics, Network and Other adjustments are found in URRT, Worksheet 1, "Other", and PA Rate Template Table 5.

# **Index Rate**

The experience period index rate is KHPC's allowed claims PMPM, set in accordance with the single risk pool provision. All KHPC covered benefits are categorized as Essential Health Benefits (EHBs), therefore no adjustment was made to the experience period index.

**Projected Allowed Claims:** The KHPC experience period allowed claims, benefit-adjusted, trended to the projection period (See <u>Projection Factors</u> section above), and credibility adjusted, is the *Projected Allowed Claims at Current Benefits*. This number is reflected in Worksheet 1 of the URRT ("Projected Allowed Experience Claims PMPM (w/ applied credibility if applicable)").

To calculate the projected index rate:

- 1. Start with Projected Allowed Claims at Current Benefits
- 2. The *Projected Allowed Claims at Current Benefits* reflect EHBs 100 percent, so no adjustment needs to be made to add EHBs and remove non-EHB claim cost. This is the index rate for individuals renewing January December.

See Exhibit J for the Index Rate.

# Paid to Allowed Ratio

KHPC used the prescribed URRT allowed claim rate development methodology in conjunction with a paid and incurred rate development methodology to determine final premium rates. The URRT projects allowed claims, and uses a paid-to-allowed ratio in order to adjust allowed claims to paid levels. This value is then used to develop premiums. In order to determine the paid-to-

allowed ratio, KHPC projected paid and incurred claims, adjusted for benefits, to the experience period.

Projected Paid and Incurred Claims are calculated as follows:

- 1. Gather claims experience as described in the Data section above.
  - a. Base Experience Period (BEP) Paid Claims, Capitation, and Rx Rebates
  - b. BEP Member Months
- 2. Develop BEP Paid and Incurred Claims:

$$BEP\ Paid\ and\ Incurred\ Claims = \frac{BEP\ Paid\ Claims}{Completion\ Factor}$$

The development of completion factors is described in <u>Experience Period Premium</u> and Claims above.

3. Develop the BEP Paid and Incurred Claim PMPM:

$$BEP\ Paid\ and\ Incurred\ Claim\ PMPM = \frac{BEP\ Paid\ and\ Incurred\ Claims}{BEP\ Member\ Months}$$

4. Develop *Trended Claim PMPM*: Using the aggregate trend described in the <u>Projection Factors</u> section above, trend the BEP Paid and Incurred Claim PMPM from the midpoint of the experience period to the midpoint of the rating period.

Trended Claim PMPM

```
= [BEP\ Paid\ and\ Incurred\ Claim\ PMPM] \times (1 + [Trend\%])^{Trend\ Months/12}
```

5. Develop *Projected Paid and Incurred Claim PMPM*:

```
Projected Paid and Incurred Claims PMPM
= [Trended Claim PMPM] × [Benefit Adjustment]
× [Morbidity Adjustment] × [Other Adjustment]
```

The *Benefit Adjustment*, *Morbidity Adjustment*, and *Other Adjustment* are discussed in the <u>Projections Factors</u> section above.

- 6. Develop *Projected Claims PMPM by Benefit* as follows:
  - a. KHPC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a \$0 office visit copayment and a \$25 ER copayment. Given a particular benefit

design (for example, \$20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on cumulative probability distributions (CPDs), where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.

b. This actuarial cost model derives a Manual Cost for each benefit design in the experience period, as well as plans being offered in the projection period. The average Manual Cost of the experience is compared to the Manual Cost of the base plan. The projected experience period data is then adjusted to the base plan:

$$Benefit\ Level\ Adjustment = rac{Average\ Manual\ Cost\ in\ Projection\ Period}{Manual\ Cost\ of\ Base\ Plan}$$

c. The *Projected Paid and Incurred Claim PMPM* (Step 5) is then adjusted to the Base Plan as follows:

$$Base\ Plan\ Paid\ and\ Incurred\ Claims\ PMPM\\ = \frac{Benefit\ Adjusted\ Paid\ and\ Incurred\ Claims\ PMPM}{Benefit\ Level\ Adjustment}$$

d. Each additional benefit design has its own unique Manual Cost, which can then be compared to the Base Plan to develop a Benefit Relativity:

$$Benefit \ Relativity \ A = \frac{Manual \ Cost \ of \ Benefit \ A}{Manual \ Cost \ of \ Base \ Plan}$$

- e. The Benefit Relativity developed in d. above is then used as a gauge to develop a final *Pricing Relativity*. This pricing relativity is developed using actuarial judgment including the following considerations:
  - i. Final premium relativities must make sense based on benefits. For example, the annual cost difference between a PPO 2000 and PPO 1000 must be less than \$1000.
  - ii. Adjustments for plan designs that fall outside of the actuarial cost model.
- a. So the *Projected Claims PMPM by Benefit* is:

Projected Claims PMPM Benefit A
= Projected Claims PMPM Base Plan
× Pricing Relativity A

- b. And to arrive at the *Total Projected Claims PMPM*, KHPC assumes a distribution of members across the benefit plans being offered in 2019. The *Total Projected Claims PMPM*:
- = Projected Claims PMPM Benefit  $A \times Expected$  Member Dist of Benefit A + Projected Claims PMPM Benefit  $B \times Expected$  Member Dis of Benefit  $B + \cdots$
- 7. The Paid-To-Allowed Ratio is then:

$$Paid\ to\ Allowed\ Ratio = rac{Total\ Projected\ Claims\ PMPM}{Projected\ Allowed\ Claims\ at\ Current\ Benefits}$$

See Exhibit G for the development of the *Paid-to-Allowed Ratio*. And see Exhibit L for the plan-level projected incurred amount development.

# **Risk Adjustment**

# **Projected Risk Adjustments PMPM:**

Relevant to 2019 pricing is the impact of Commercial Risk Adjustment (CRA) payment transfers that are expected to be earned in 2019. The pricing impact is:

```
[Net Projected Risk Adjustments PMPM]
= [Projected CRA Transfer PMPM] - [Risk Adjustment Fee PMPM]
```

The following items are those that we deem important in generating a CRA payment transfer adjustment:

- 1. Risk profile of the those enrolled in CRA eligible plans for the market or state (i.e. competitors) relative to risk profile of CRA eligible membership enrolled in our plans
- 2. Statewide average premiums
- 3. Current market penetration of this company and competitors in the market and in the state
- 4. 2016-2017 risk adjustment results
- 5. Market improvement in coding risk: CBC's ACA book of business has had a churn rate that makes a multi-year perspective of member diagnosis and risk very challenging. Because closing gaps in care and coding, and a myriad of other risk adjustment functions require more than a single year of data to facilitate an accurate depiction of risk, it is believed that CBC is disadvantaged in the market. This will drive CBC's relative risk to the market down over time.

To fund the HHS-risk adjustment program, issuers will remit to HHS a fee of \$0.13 PMPM. The Risk Adjustment Fee PMPM is included in the URRT Worksheet 1, "Projected Risk Adjustments PMPM", and is found on Exhibit K.

# **Market Adjusted Index Rate**

The Market Adjusted Index Rate is calculated as the Index Rate adjusted for all allowable market-wide modifiers defined in the market rating rules, 45 CFR Part 156.80(d)(1). So,

[Market Adjusted Index Rate]

- $= ([Index\ Rate]\ x\ [Paid\ to\ Allowed\ Ratio]$
- [Net Projected ACA Reinsurace Recoveries]
- [Net Projected Risk Adjustments PMPM] + [Exchange Fees PMPM])
- ÷ [Paid to Allowed Ratio]

See Exhibit K for the development of the Market Adjusted Index Rate.

# **Retention Items**

# **Administrative Expense Load:**

- 1. Administrative Expense: Calculated using an allocation method from CBC's Finance department, and trended to the rating period. Costs are allocated according to results reported through a company-wide questionnaire. On an annual basis, each cost center within the company completes a questionnaire listing the distribution of costs (in percentage terms) by product as well as by market segment. For example, the questionnaire will ask what percentage of time is spent on PPO versus HMO versus Drug versus Medicare. And separately will ask what percentage of time is spent on large group, small group, individual, and government programs. Using those distributions, all costs needed to perform the business are allocated to the proper market segments and lines of business. The administrative expense applied in the rate development is the total expense allocated to KHPC Individual products. Administrative expenses are included in the URRT Worksheet 1, "Administrative Load", and PA Rate Template Table 6. Expense as a percentage of premium vary by plan because a fixed dollar admin PMPM is applied to each plan.
- 2. Broker Expense: Calculated based on KHPC's explicit per contract broker fee. Broker Expense is included in the URRT Worksheet 1, "Administrative Load", and PA Rate Template Table 6. KHPC pays commissions for new business and renewal enrollment received during open enrollment, both on and off exchange, and in all geographic areas. Commission is less on catastrophic plans due to the lower premium. KHPC does not pay commission during Special Enrollment Periods (SEP). The 2019 broker commission schedule is yet to be finalized. Attached please find the 1/1/2018 copy of the broker agreement redacted version. Files are as follows:
  - a. Redacted Agent Agreement: "Ind\_18-11\_Initial\_KHPC\_PPO\_WBEBrokerIndRedacted\_Supporting\_20180518.pdf"
  - b. Redacted Preferred Producer Master Agreement: "Ind\_18-11\_Initial\_KHPC\_PPO\_PPMABrokerIndRedacted\_Supporting\_20180518.pdf"
- 3. Member Out-Of-Pocket (OOP) and Ways to Save:
  - a. Description: These products offer enhanced transparency to cost savings potential both prospectively and retrospectively. These are new services included in each

- of KHPC's plans that work to decrease costs by engaging members in their health care decisions. The Member OOP program will show a member, prospectively, the value of a service and the impact of member cost-sharing when that service is incurred. It allows a member to shop for the best price while introducing transparency related to the member's expected cost share at the time of service. The "Ways to Save" program allows members to receive alerts, retrospectively, informing them of cost savings that could have been incurred had they have known about competing medical providers in the area. The alerts are retrospective and offer transparency around member's healthcare options.
- b. Costs: Costs are aggregated into CBC's total administrative expense above. No additional fee is charged. The cost is approximately \$0.25 PMPM. Included in the URRT Worksheet 1, "Administrative Load", and PA Rate Template Table 6.
- 4. Value-Based Benefits (VBB): Standard with each plan, Capital BlueCross includes wellness incentives to maximize the likelihood that consumers make positive behavioral changes, which lead to better health, and curbed health care costs for employers and employees alike. The incentive is as follows:
  - a. Complete Health Risk Assessment questionnaire and receive a gift card.
  - b. Participate in an online coaching program and receive a gift card reward.
  - c. The wellness program is administered through a vendor and costs are based on vendor fees, anticipated participation, and reward card amounts.
  - d. Included in the URRT Worksheet 1, "Administrative Load", and PA Rate Template Table 6.
- 5. Identity Theft Coverage: Identity protection offering will include the following components:
  - a. Credit monitoring Monitors activity that may affect credit
  - b. Fraud detection Identifies potentially fraudulent use of identity or credit
  - c. Fraud resolution support Assists members in addressing issues that arise in relation to credit monitoring and fraud detection
  - d. Included in the URRT Worksheet 1, "Administrative Load", and PA Rate Template Table 6.
- 6. Additional Quality Improvement: The Final Notice of Benefit and Payment Parameters (NBPP) for 2019 finalized the rule to allow issuers to apply a standard 0.8% of premium for quality improvement (QI) measures in the MLR calculation. Total QI amounts applied in rating equal 0.8%.

# Profit (or Contribution to Surplus) & Risk Margin:

7. Contingency: Contingency is included in the URRT Worksheet 1, "Profit and Risk", and PA Rate Template Table 6.

### Taxes and Fees:

1. Health Insurer Fee (HIF) – Section 9010 of PPACA and Section 1406 of the Reconciliation Act (which modified PPACA) refers to HIF. The fee is a fixed-dollar amount distributed across health insurance providers. This fee has been suspended for 2019.

- 2. Exchange Fee All issuers participating in a federally-facilitated exchange will remit 3.5% of premium to HHS. The exchange user fee is applied as an adjustment to the Index Rate at the market level. The calculation and amount is found in Exhibit K. The amount is also found in PA Rate Template, Table 5.
- 3. Federal Income Tax: Federal Income Tax will be collected on the 2% contingency built into the premium. The projected Federal Income Tax is included in the URRT Worksheet 1, "Taxes and Fees", and PA Rate Template, Table 6.

See Exhibit H for all retention values.

# **Plan Rate Development**

The Plan Adjusted Index Rates are included in Worksheet 2, Section IV of the URRT.

The following adjustments were used to derive the Plan Adjusted Index Rate:

- 1. Actuarial Value and Cost Sharing adjustment: The Actuarial Value and Cost Sharing Adjustment is determined using KHPC's actuarial cost model. KHPC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a \$0 office visit copayment and a \$25 ER copayment. Given a particular benefit design (for example, \$20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a claim PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on CPDs, where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.
- 2. Induced Demand: Please see Table 8
- 3. Provider Network: The Provider network is the same across all PPO plans. A network factor is applied to the EPO plan.
  - a. The Capital Advantage EPO plan is a plan built around Pinnacle Health's delivery system and is available in Cumberland, Dauphin, and Perry counties.
  - b. See Exhibit O1 for the development of the network factor.
- 4. Adjustment for benefits in addition to EHBs: No benefits other than EHBs are included in the plans, so no adjustment is necessary.
- 5. Catastrophic Plans: Applied to catastrophic plans to reflect lower morbidity.
- 6. Adjustment for distribution and administrative costs: Described in <u>Non-Benefit Expenses</u> and <u>Profit & Risk</u> section above.
- 7. Tobacco Adjustment: Calculated as the average tobacco factor applied across the risk pool.

The development of the Plan Adjusted Index rate is found in Exhibit L, and summarized in Exhibit M.

# Plan Premium Development for 21-Year-Old Non-Tobacco User

**Age Curve Calibration**: The average age factor is calculated by taking the member-weighted average of current individual enrollment by age in KHPC. Age factors are applied in accordance with CMS's Standard Age Curve. The age calibration factor is adjusted for contracts with greater than three children under the age of 21. Please see file Ind\_18-12\_Initial\_KHPC\_PPO\_List-Billed\_Supporting\_20180518 for the calculation.

**Geographic Factor Calibration**: The average geographic rating factor is calculated by taking the KHPC member-weighted average by region.

**Geographic Factors:** KHPC performed regional analysis to quantify the cost difference between the three regions in our service area. The analysis gathered allowed claims in a 12-month period by region, normalized for demographics. We then compared the claim cost for each of the three regions, and found cost differentials between the regions, mostly due to differences in hospital contracting between regions. The data from the analysis is found in Exhibit Q.

**Tobacco Factor Calibration:** Average tobacco factor is calculated using 2017 member and smoking status data.

The calibration is:

```
[Calibrated Plan Adjusted Index Rate] = [Plan Adjusted Index Rate] \div ([Age Curve Calibration] \times [Geographic Factor Calibration] \times [Tobacco Factor])
```

Calibrated Plan Adjusted Index Rates are found on PA Rate Template Table 10. The calibration factors and development are found on Exhibit N.

# **Consumer Adjusted Premium Rate Development**

The Consumer Adjusted Premium Rate is developed as follows:

1. Member-Level Consumer Adjusted Premium Rate:

```
[Member - Level Consumer Adjusted Premium Rate]
= [Calibrated Plan Adjusted Index Rate] × [Age Factor]
× [Geographic Factor] × [Tobacco Factor]
```

2. [Family Consumer Adjusted Premium Rate] =  $\sum$ [Member – Level Consumer Adjusted Premium Rate] With no more than three child dependents under age 21 taken into account

All consumer-level adjustments are applied uniformly to all plans in the Single Risk Pool. These adjustments do not vary by plan. Age and Geographic factors are displayed in Exhibits O.

Base Rates, i.e. Calibrated Plan Adjusted Index Rates, are found on Exhibit P.

# **AV Metal Values**

The AV Metal Values included in Worksheet 2 of the URRT were based on the federally issued AV Calculator.

# **AV Pricing Values**

All AV Pricing values were developed using KHPC's actuarial cost model and actuarial judgment as described in section Paid to Allowed above. Differences in health status are not included.

# **Projected Loss Ratio**

See Exhibit I for the projected loss ratio calculation. The projected loss ratio is calculated using the federally prescribed MLR methodology.

# **Membership Projection**

The membership projections found in Worksheet 2 of the URRT were developed by assuming that moderate growth and similar distribution to current.

# **Actuarial Statement**

I, ASA, MAAA, am of the opinion that this filing is in compliance with the applicable Federal and State Laws and Regulations concerning the Patient Protection and Affordable Care Act and the Health Care and Education Reconciliation Act of 2010.

I, ASA, MAAA, do hereby certify that:

- 1. This filing has been prepared in accordance with the following:
  - a. Actuarial Standard of Practice No. 5, "Health and Disability Claims"
  - b. Actuarial Standard of Practice No. 8, "Regulatory Filings for Rates and Financial Projections for Health Plans"
  - c. Actuarial Standard of Practice No. 12, "Risk Classification"
  - d. Actuarial Standard of Practice No. 23, "Data Quality"
  - e. Actuarial Standard of Practice No. 25, "Credibility Procedures Applicable to Accident and Health, Group Term Life, and Property/Casualty Coverage"
  - f. Actuarial Standard of Practice No. 26, "Compliance with Statutory and Regulatory Requirements for the Actuarial Certification of Small Employer Health Benefit Plans"
  - g. Actuarial Standard of Practice No. 41, "Actuarial Communications".

### 2. The index rate is:

- a. Projected in compliance with all applicable state and federal statutes and regulations (45 CFR 156.80(d) (1)).
- b. Developed in compliance with the applicable Actuarial Standards of Practice.
- c. Reasonable in relation to the benefits provided and the population anticipated to be covered.
- d. Neither excessive nor deficient.
- e. Adjusted by only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) to generate plan level rates.
- 3. The percent of total premium that represents essential health benefits included in Worksheet 2, Sections III and IV were calculated in accordance with actuarial standards of practice.
- 4. The AV Calculator was used to determine the AV Metal Values shown in Worksheet 2 of the Part I Unified Rate Review Template for all plans, and in accordance with CFR 156.135(b)(2) as necessary. For any plan requiring an alternative method, the

development of the actuarial value is based on one of the acceptable alternative methods outlined in 156.135(b)(2) or 156.135(b)(3) for benefits that deviate substantially from the parameters of the AVC and have a material impact on the actuarial value.

- a. The analysis was
  - i. conducted by a member of the American Academy of Actuaries, and
  - ii. performed in accordance with generally accepted actuarial principles and methods.
- 5. All factor, benefit and other changes from the prior approved filing have been disclosed in the actuarial memorandum.
- 6. New plans cannot be considered modifications of existing plans under the uniform modification standards in 45 CFR 147.106.
- 7. The information presented in the PA Actuarial Memorandum and PA Actuarial Memorandum Rate Exhibits is consistent with the information presented in the 2019 Rate Filing Justification.

, ASA, MAAA Actuarial Associate

---	---------	--------------	------------

# **Scope and Purpose**

By this filing, Keystone Health Plan Central (KHPC), a subsidiary of Capital BlueCross (CBC), submits rates for products to be made available to individuals on and after January 1, 2019. KHPC will offer individual products off the federally-facilitated exchange.

# **Rate History and Proposed Variations in Rate Changes**

Market	Company	Effective Date	SERFF#	Annual Increase
Individual	KHPC	1/1/2015	CABC-129635491	-8.00%
Individual	KHPC	1/1/2016	CABC-130076965	1.40%
Individual	KHPC	1/1/2017	CABC-130539563	55.10%
Individual	KHPC	1/1/2018	CABC-13102203	9.20%

# **Average Rate Change**

KHPC is proposing an aggregate annual 7.3% rate decrease. The rate change does vary by plan. The rate change is calculated in PA Rate Template Part III, Table 10, cell AC15.

#### **Regulatory Considerations**

Rates submitted by this filing assume changes to the current regulatory framework. As directed by the Insurance Department, the following factors have been applied to the rates for regulatory changes:

• Individual Mandate: 0.06 added to the morbidity factor.

### **Membership**

Membership is shown in PA Rate Template Part I, Table 1. The average age is 34.

## **Benefit Changes 2018-2019**

A summary of proposed 2019 benefits is included in Exhibit A.

There are several benefit changes being implemented in 2018. All benefit changes comply with the uniform modification of coverage standards described in 45 CFR 147.106(e). Any plan with a benefit change that did not meet the uniform modification of coverage standard was terminated, and

a new plan was created in its place. Benefit changes by plan are listed in Exhibit B, highlighted in yellow.

## **Experience Period Premium and Claims**

**Single Risk Pool**: The data used to develop rates and shown in the URRT abides by 45 CFR part 156.80(d) single risk pool requirements. The single risk pool reflects all covered lives for every non-grandfathered product/plan combination for KHPC in the individual market. The single risk pool includes transitional products/plans for purposes of base rate experience.

**Base Experience Period**: The base experience period (BEP) includes completed fee-for-service paid and incurred claims for dates of service between January 1, 2017 and December 31, 2017.

Paid Through Date: Claims in the BEP are paid through March 31, 2018

**Premiums** (net of MLR Rebate) in BEP: Premiums are calculated on an earned basis in the BEP. MLR rebate adjustments are equal to zero as KHPC does not expect to refund any MLR rebates in the BEP.

#### Allowed and Incurred Claims in BEP:

- Allowed claims are developed by combining paid claims with member cost-sharing.
   Allowed claims meet the definition in the URR instructions. They do not include provider quality incentive payments.
- Incurred claims are net of HHS CSR payments.
- CBC only covers Essential Health benefits (EHBs).
- KHPC does not include capitated services.
- Allowed and Incurred claims are net of pharmacy rebates. BEP rebates are completed based on actual utilization of rebate-eligible drugs and rebate amounts.

**Estimated Incurred but Not Paid Claims**: Paid claims by date of service come directly from CBC's data warehouse. The method for calculating incurred claims in the BEP is as follows:

- 1. Historical fee-for-service claims are viewed by date of service and date of payment in a claims triangle.
- 2. The claims triangle payments are then accumulated by date of service to develop factors that represent the rate of accumulation or rate of "completion".
- 3. Historical rates of completion by duration are used to derive projected rates of completion. Some of the methods used to develop projected completion factors are averages (e.g. harmonic averages, time weighted averages, geometric averages) and regression methods. Numerous items are considered when viewing these averages or regression statistics, such as the impact of high claims on perceived completion patterns.
- 4. For durations that exhibit a projected completion factor greater than the Valuation Actuary's chosen threshold (e.g. 80% complete), cumulative paid and incurred claims are divided by the projected completion factor to arrive at ultimate incurred claims. For durations that are less than the chosen threshold, a projection methodology is used. Similar

- to completion factor development, projection methodologies are worthy of a lengthy discussion. In general, an ultimate incurred claims PMPM is derived by projecting a recent 12-month period to the current month(s) and seasonally adjusting.
- 5. With all months having both a cumulative paid amount and an estimated ultimate incurred amount, the completion factors used in pricing are calculated by taking the quotient of the two. Allowed completion and incurred completion are assumed to be identical.
- 6. Both allowed and paid claims in the BEP are completed by applying completion factors by incurred month developed in Step 6.

$$BEP\ Incurred\ Claims\ =\ \sum \frac{BEP\ Paid\ Claims\ by\ Incurred\ Month}{Completion\ by\ Incurred\ Month}$$

BEP Allowed Claims

$$= \sum \frac{\textit{BEP Paid Claims} + \textit{BEP Member Cost Share by Incurred Month}}{\textit{Completion by Incurred Month}}$$

**Risk Adjustment in BEP**: Risk adjustment amounts in the BEP are equal to those reported by the Department on 5/9/2018.

**Loss Ratio in BEP:** Loss ratio is 145.03%

### **Credibility of Data**

No Credibility Manual was used.

### **Trend Identification**

Trend: 11.3%

Trend levels reflect CBC's best estimate of changes in utilization, provider reimbursement contracts, the network of facilities and providers, disease management initiatives and the impact of utilization management.

The following is a description of considerations used to determine trend.

- 1. Base Cost/ Change in hospital and physician contracting: The contracted increase in reimbursements to hospitals and physicians is the basis of cost trends. CBC uses the following to project future costs:
  - a. Vendor Physician Cost Model and Internal Hospital Contracting Model
    - i. The medical cost models use best estimates of Capital BlueCross (CBC)'s future contracting increases with physicians and hospitals. The models use cost estimates based on varying contract effective dates by physician and hospital. All facilities and providers are considered in this modeling effort (i.e. acute and non-acute, network and non-network, inpatient and outpatient, in- area and out-of-area). From there, a monthly anticipated

cost (assuming static utilization) summary is produced which can be used in projecting future claims costs. Cost trends are determined at the CBC book of business level for all commercial business.

- b. Internal Prescription Drug Trend Model
  - i. Price Inflation
  - ii. Contract Pricing
  - iii. Member Cost-Sharing
  - iv. Units per Script
  - v. Brand/Generic Mix
  - vi. Therapeutic Mix
  - vii. Cost per Script
- 2. Utilization Considerations:
  - a. Intensity of medical services rendered
  - b. Changes in place of service (e.g. continued migration of inpatient stays to outpatient setting)
  - c. Further migration from brand prescription drugs to generic prescription drugs
  - d. Favorable impacts of value based benefits designs
  - e. Induced Utilization: Induced utilization is CBC's best estimate for increased utilization in the individual market due to unknown future regulatory changes. CBC predicts that consumers will use more services in 2019 due to unknown coverage status in 2020.
  - f. Medical utilization estimates reviewed by CBC's Chief Medical Officer
- 3. Leveraging: The trend model is based on allowed cost increases. Paid claims trend at a higher rate than allowed due to leveraging. Leveraging is the impact of static cost-share, such as deductibles, to the paid trend. Estimated leveraging is calculated in Exhibit E1.
  - Estimated costs are based on average plan benefit value in the month, calculated using CBC's internal benefit model.
  - o CBC expects the average benefit level in 2019 to be similar to current month, 201803.
  - As of 201803, on average, Individual members pay 44.8% of costs, while CBC pays 55.2%. So for example,
    - \$2,000 in annual allowed claims results in member pay = \$896, and CBC pay = \$1,104.
    - \$2,000 trends at 5.5% = \$2,110
    - Member pay is fixed at \$896
    - CBC pay = 2,110 896 = \$1,214
    - Total CBC trend = 1,214/1,104 1 = 10%
  - With an allowed trend of 5.5%, and static cost-share, leveraging will add an additional 4.5% to trend.
- 4. Intensity: Intensity is defined as the amount of inputs used to provide each unit of service. This can best be seen in an example:

Year 2018

Type of Service	<u>Units</u>	Cost per Unit
X-Ray	1	\$200
MRI	1	\$5,000
Total	2	\$5,200

Year 2019

Type of Service	<u>Units</u>	Cost per Unit
X-Ray	0	\$200
MRI	2	\$5,000
Total	2	\$10,000

Total Annual Trend 92%
------------------------

5. Underwriting Cycle: The underwriting cycle is defined as the tendency to swing between profitable and unprofitable periods over time. The underwriting cycle is exacerbated partly by pricing performed with incomplete information as to the level of current experience trends. A reaction delay occurs, as carriers tend to rely on measurements of past experience in developing current pricing assumptions. As a result, carriers are often increasing their pricing trends when actual experience trends have begun to decline, and decreasing their pricing trends actual trends are increasing. KHPC strives to mitigate the underwriting cycle by keeping trends consistent through times of increasing and decreasing claim cost and utilization.

**Historical Experience:** Historical experience was not used to the develop trend.

**Benefit Categories**: Claims in the benefit categories displayed in the URRT come directly from CBC's data warehouse. These same categories are used to develop category-level trend. See Exhibit C for a description of benefits by benefit category.

See Exhibit E for KHPC's pricing trend, as well as cost and utilization components of the pricing trend.

# **Rate Development & Change**

# **Projection Factors**

**Changes in Morbidity:** Found in URRT Worksheet 1, "Pop'l risk Morbidity", and PA Rate Template Table 5.

The changes to morbidity incorporate both the Department's Individual Mandate factor discussed above, and changes to the population going from Bronze and Catastrophic experience to Catastrophic in the projection period. The additional morbidity change factor calculated in Exhibit F.

Changes in Benefits: Benefit changes are not applied to allowed claims as allowed should stay consistent from 2017 to 2019. Benefit changes are applied in the development of future incurred claims, due to changes in member cost-share. This calculation is shown in Exhibit D, and applied in Exhibit G. The manual cost PMPMs are developed from CBC's internal benefit relativity model, discussed in the Plan Adjusted Index Rate section below. The benefit change is equal to member-month weighted average projected manual PMPM divided by member-month weighted average manual PMPM in the BEP. This process is further discussed in the Paid-to-Allowed section below.

**Changes in Demographics:** KHPC does not expect changes in demographics in its individual population.

**Changes in Network:** No network adjustment is applied.

**Other Adjustments:** No other adjustment is applied.

Benefits, Demographics, Network and Other adjustments are found in URRT, Worksheet 1, "Other", and PA Rate Template Table 5.

#### **Index Rate**

The experience period index rate is KHPC's allowed claims PMPM, set in accordance with the single risk pool provision. All KHPC covered benefits are categorized as Essential Health Benefits (EHBs), therefore no adjustment was made to the experience period index.

**Projected Allowed Claims:** The KHPC experience period allowed claims, benefit-adjusted, trended to the projection period (See <u>Projection Factors</u> section above), and credibility adjusted, is the *Projected Allowed Claims at Current Benefits*. This number is reflected in Worksheet 1 of the URRT ("Projected Allowed Experience Claims PMPM (w/ applied credibility if applicable)").

To calculate the projected index rate:

- 1. Start with Projected Allowed Claims at Current Benefits
- 2. The *Projected Allowed Claims at Current Benefits* reflect EHBs 100 percent, so no adjustment needs to be made to add EHBs and remove non-EHB claim cost. This is the index rate for individuals renewing January December.

See Exhibit J for the Index Rate.

#### **Paid to Allowed Ratio**

KHPC used the prescribed URRT allowed claim rate development methodology in conjunction with a paid and incurred rate development methodology to determine final premium rates. The URRT projects allowed claims, and uses a paid-to-allowed ratio in order to adjust allowed claims to paid levels. This value is then used to develop premiums. In order to determine the paid-to-

allowed ratio, KHPC projected paid and incurred claims, adjusted for benefits, to the experience period.

Projected Paid and Incurred Claims are calculated as follows:

- 1. Gather claims experience as described in the Data section above.
  - a. Base Experience Period (BEP) Paid Claims, Capitation, and Rx Rebates
  - b. BEP Member Months
- 2. Develop BEP Paid and Incurred Claims:

$$BEP\ Paid\ and\ Incurred\ Claims = \frac{BEP\ Paid\ Claims}{Completion\ Factor}$$

The development of completion factors is described in <u>Experience Period Premium</u> and Claims above.

3. Develop the BEP Paid and Incurred Claim PMPM:

$$BEP\ Paid\ and\ Incurred\ Claim\ PMPM = \frac{BEP\ Paid\ and\ Incurred\ Claims}{BEP\ Member\ Months}$$

4. Develop *Trended Claim PMPM*: Using the aggregate trend described in the <u>Projection Factors</u> section above, trend the BEP Paid and Incurred Claim PMPM from the midpoint of the experience period to the midpoint of the rating period.

Trended Claim PMPM

```
= [BEP\ Paid\ and\ Incurred\ Claim\ PMPM] \times (1 + [Trend\%])^{Trend\ Months/12}
```

5. Develop *Projected Paid and Incurred Claim PMPM*:

```
Projected Paid and Incurred Claims PMPM
= [Trended Claim PMPM] × [Benefit Adjustment]
× [Morbidity Adjustment] × [Other Adjustment]
```

The *Benefit Adjustment*, *Morbidity Adjustment*, and *Other Adjustment* are discussed in the <u>Projections Factors</u> section above.

- 6. Develop *Projected Claims PMPM by Benefit* as follows:
  - a. KHPC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a \$0 office visit copayment and a \$25 ER copayment. Given a particular benefit

design (for example, \$20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on cumulative probability distributions (CPDs), where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.

b. This actuarial cost model derives a Manual Cost for each benefit design in the experience period, as well as plans being offered in the projection period. The average Manual Cost of the experience is compared to the Manual Cost of the base plan. The projected experience period data is then adjusted to the base plan:

$$Benefit\ Level\ Adjustment = rac{Average\ Manual\ Cost\ in\ Projection\ Period}{Manual\ Cost\ of\ Base\ Plan}$$

c. The *Projected Paid and Incurred Claim PMPM* (Step 5) is then adjusted to the Base Plan as follows:

$$Base\ Plan\ Paid\ and\ Incurred\ Claims\ PMPM\\ = \frac{Benefit\ Adjusted\ Paid\ and\ Incurred\ Claims\ PMPM}{Benefit\ Level\ Adjustment}$$

d. Each additional benefit design has its own unique Manual Cost, which can then be compared to the Base Plan to develop a Benefit Relativity:

$$Benefit\ Relativity\ A = \frac{Manual\ Cost\ of\ Benefit\ A}{Manual\ Cost\ of\ Base\ Plan}$$

- e. The Benefit Relativity developed in d. above is then used as a gauge to develop a final *Pricing Relativity*. This pricing relativity is developed using actuarial judgment including the following considerations:
  - i. Final premium relativities must make sense based on benefits. For example, the annual cost difference between a PPO 2000 and PPO 1000 must be less than \$1000.
  - ii. Adjustments for plan designs that fall outside of the actuarial cost model.
- a. So the *Projected Claims PMPM by Benefit* is:

Projected Claims PMPM Benefit A
= Projected Claims PMPM Base Plan
× Pricing Relativity A

- b. And to arrive at the *Total Projected Claims PMPM*, KHPC assumes a distribution of members across the benefit plans being offered in 2019. The *Total Projected Claims PMPM*:
- = Projected Claims PMPM Benefit  $A \times Expected$  Member Dist of Benefit A + Projected Claims PMPM Benefit  $B \times Expected$  Member Dis of Benefit  $B + \cdots$
- 7. The Paid-To-Allowed Ratio is then:

$$Paid\ to\ Allowed\ Ratio = rac{Total\ Projected\ Claims\ PMPM}{Projected\ Allowed\ Claims\ at\ Current\ Benefits}$$

See Exhibit G for the development of the *Paid-to-Allowed Ratio*. And see Exhibit L for the plan-level projected incurred amount development.

### **Risk Adjustment**

### **Projected Risk Adjustments PMPM:**

Relevant to 2019 pricing is the impact of Commercial Risk Adjustment (CRA) payment transfers that are expected to be earned in 2019. The pricing impact is:

```
[Net Projected Risk Adjustments PMPM]
= [Projected CRA Transfer PMPM] - [Risk Adjustment Fee PMPM]
```

The following items are those that we deem important in generating a CRA payment transfer adjustment:

- 1. Risk profile of the those enrolled in CRA eligible plans for the market or state (i.e. competitors) relative to risk profile of CRA eligible membership enrolled in our plans
- 2. Statewide average premiums
- 3. Current market penetration of this company and competitors in the market and in the state
- 4. 2016-2017 risk adjustment results
- 5. Market improvement in coding risk: CBC's ACA book of business has had a churn rate that makes a multi-year perspective of member diagnosis and risk very challenging. Because closing gaps in care and coding, and a myriad of other risk adjustment functions require more than a single year of data to facilitate an accurate depiction of risk, it is believed that CBC is disadvantaged in the market. This will drive CBC's relative risk to the market down over time.

To fund the HHS-risk adjustment program, issuers will remit to HHS a fee of \$0.13 PMPM. The Risk Adjustment Fee PMPM is included in the URRT Worksheet 1, "Projected Risk Adjustments PMPM", and is found on Exhibit K.

### **Market Adjusted Index Rate**

The Market Adjusted Index Rate is calculated as the Index Rate adjusted for all allowable market-wide modifiers defined in the market rating rules, 45 CFR Part 156.80(d)(1). So,

[Market Adjusted Index Rate]

- $= ([Index\ Rate]\ x\ [Paid\ to\ Allowed\ Ratio]$
- [Net Projected ACA Reinsurace Recoveries]
- [Net Projected Risk Adjustments PMPM] + [Exchange Fees PMPM])
- ÷ [Paid to Allowed Ratio]

See Exhibit K for the development of the Market Adjusted Index Rate.

### **Retention Items**

### **Administrative Expense Load:**

- 1. Administrative Expense: Calculated using an allocation method from CBC's Finance department, and trended to the rating period. Costs are allocated according to results reported through a company-wide questionnaire. On an annual basis, each cost center within the company completes a questionnaire listing the distribution of costs (in percentage terms) by product as well as by market segment. For example, the questionnaire will ask what percentage of time is spent on PPO versus HMO versus Drug versus Medicare. And separately will ask what percentage of time is spent on large group, small group, individual, and government programs. Using those distributions, all costs needed to perform the business are allocated to the proper market segments and lines of business. The administrative expense applied in the rate development is the total expense allocated to KHPC Individual products. Administrative expenses are included in the URRT Worksheet 1, "Administrative Load", and PA Rate Template Table 6. Expense as a percentage of premium vary by plan because a fixed dollar admin PMPM is applied to each plan.
- 2. Broker Expense: Calculated based on KHPC's explicit per contract broker fee. Broker Expense is included in the URRT Worksheet 1, "Administrative Load", and PA Rate Template Table 6. KHPC pays commissions for new business and renewal enrollment received during open enrollment, both on and off exchange, and in all geographic areas. Commission is less on catastrophic plans due to the lower premium. KHPC does not pay commission during Special Enrollment Periods (SEP). The 2019 broker commission schedule is yet to be finalized. Attached please find the 1/1/2018 copy of the broker agreement redacted version. Files are as follows:
  - a. Redacted Agent Agreement: "Ind\_18-11\_Initial\_KHPC\_PPO\_WBEBrokerIndRedacted\_Supporting\_20180518.pdf"
  - b. Redacted Preferred Producer Master Agreement: "Ind\_18-11\_Initial\_KHPC\_PPO\_PPMABrokerIndRedacted\_Supporting\_20180518.pdf"
- 3. Member Out-Of-Pocket (OOP) and Ways to Save:
  - a. Description: These products offer enhanced transparency to cost savings potential both prospectively and retrospectively. These are new services included in each

- of KHPC's plans that work to decrease costs by engaging members in their health care decisions. The Member OOP program will show a member, prospectively, the value of a service and the impact of member cost-sharing when that service is incurred. It allows a member to shop for the best price while introducing transparency related to the member's expected cost share at the time of service. The "Ways to Save" program allows members to receive alerts, retrospectively, informing them of cost savings that could have been incurred had they have known about competing medical providers in the area. The alerts are retrospective and offer transparency around member's healthcare options.
- b. Costs: Costs are aggregated into CBC's total administrative expense above. No additional fee is charged. The cost is approximately \$0.25 PMPM. Included in the URRT Worksheet 1, "Administrative Load", and PA Rate Template Table 6.
- 4. Value-Based Benefits (VBB): Standard with each plan, Capital BlueCross includes wellness incentives to maximize the likelihood that consumers make positive behavioral changes, which lead to better health, and curbed health care costs for employers and employees alike. The incentive is as follows:
  - a. Complete Health Risk Assessment questionnaire and receive a gift card.
  - b. Participate in an online coaching program and receive a gift card reward.
  - c. The wellness program is administered through a vendor and costs are based on vendor fees, anticipated participation, and reward card amounts.
  - d. Included in the URRT Worksheet 1, "Administrative Load", and PA Rate Template Table 6.
- 5. Identity Theft Coverage: Identity protection offering will include the following components:
  - a. Credit monitoring Monitors activity that may affect credit
  - b. Fraud detection Identifies potentially fraudulent use of identity or credit
  - c. Fraud resolution support Assists members in addressing issues that arise in relation to credit monitoring and fraud detection
  - d. Included in the URRT Worksheet 1, "Administrative Load", and PA Rate Template Table 6.
- 6. Additional Quality Improvement: The Final Notice of Benefit and Payment Parameters (NBPP) for 2019 finalized the rule to allow issuers to apply a standard 0.8% of premium for quality improvement (QI) measures in the MLR calculation. Total QI amounts applied in rating equal 0.8%.

### Profit (or Contribution to Surplus) & Risk Margin:

7. Contingency: Contingency is included in the URRT Worksheet 1, "Profit and Risk", and PA Rate Template Table 6.

#### Taxes and Fees:

1. Health Insurer Fee (HIF) – Section 9010 of PPACA and Section 1406 of the Reconciliation Act (which modified PPACA) refers to HIF. The fee is a fixed-dollar amount distributed across health insurance providers. This fee has been suspended for 2019.

- 2. Exchange Fee All issuers participating in a federally-facilitated exchange will remit 3.5% of premium to HHS. The exchange user fee is applied as an adjustment to the Index Rate at the market level. The calculation and amount is found in Exhibit K. The amount is also found in PA Rate Template, Table 5.
- 3. Federal Income Tax: Federal Income Tax will be collected on the 2% contingency built into the premium. The projected Federal Income Tax is included in the URRT Worksheet 1, "Taxes and Fees", and PA Rate Template, Table 6.

See Exhibit H for all retention values.

# **Plan Rate Development**

The Plan Adjusted Index Rates are included in Worksheet 2, Section IV of the URRT.

The following adjustments were used to derive the Plan Adjusted Index Rate:

- 1. Actuarial Value and Cost Sharing adjustment: The Actuarial Value and Cost Sharing Adjustment is determined using KHPC's actuarial cost model. KHPC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a \$0 office visit copayment and a \$25 ER copayment. Given a particular benefit design (for example, \$20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a claim PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on CPDs, where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.
- 2. Induced Demand: Please see Table 8
- 3. Provider Network: The Provider network is the same across all PPO plans. A network factor is applied to the EPO plan.
  - a. The Capital Advantage EPO plan is a plan built around Pinnacle Health's delivery system and is available in Cumberland, Dauphin, and Perry counties.
  - b. See Exhibit O1 for the development of the network factor.
- 4. Adjustment for benefits in addition to EHBs: No benefits other than EHBs are included in the plans, so no adjustment is necessary.
- 5. Catastrophic Plans: Applied to catastrophic plans to reflect lower morbidity.
- 6. Adjustment for distribution and administrative costs: Described in <u>Non-Benefit Expenses</u> and <u>Profit & Risk</u> section above.
- 7. Tobacco Adjustment: Calculated as the average tobacco factor applied across the risk pool.

The development of the Plan Adjusted Index rate is found in Exhibit L, and summarized in Exhibit M.

# Plan Premium Development for 21-Year-Old Non-Tobacco User

**Age Curve Calibration**: The average age factor is calculated by taking the member-weighted average of current individual enrollment by age in KHPC. Age factors are applied in accordance with CMS's Standard Age Curve. The age calibration factor is adjusted for contracts with greater than three children under the age of 21. Please see file Ind\_18-12\_Initial\_KHPC\_PPO\_List-Billed\_Supporting\_20180518 for the calculation.

**Geographic Factor Calibration**: The average geographic rating factor is calculated by taking the KHPC member-weighted average by region.

**Geographic Factors:** KHPC performed regional analysis to quantify the cost difference between the three regions in our service area. The analysis gathered allowed claims in a 12-month period by region, normalized for demographics. We then compared the claim cost for each of the three regions, and found cost differentials between the regions, mostly due to differences in hospital contracting between regions. The data from the analysis is found in Exhibit Q.

**Tobacco Factor Calibration:** Average tobacco factor is calculated using 2017 member and smoking status data.

The calibration is:

```
[Calibrated Plan Adjusted Index Rate] = [Plan Adjusted Index Rate] \div ([Age Curve Calibration] \times [Geographic Factor Calibration] \times [Tobacco Factor])
```

Calibrated Plan Adjusted Index Rates are found on PA Rate Template Table 10. The calibration factors and development are found on Exhibit N.

# **Consumer Adjusted Premium Rate Development**

The Consumer Adjusted Premium Rate is developed as follows:

1. Member-Level Consumer Adjusted Premium Rate:

```
[Member - Level Consumer Adjusted Premium Rate]
= [Calibrated Plan Adjusted Index Rate] × [Age Factor]
× [Geographic Factor] × [Tobacco Factor]
```

2. [Family Consumer Adjusted Premium Rate] =  $\sum$ [Member – Level Consumer Adjusted Premium Rate] With no more than three child dependents under age 21 taken into account

All consumer-level adjustments are applied uniformly to all plans in the Single Risk Pool. These adjustments do not vary by plan. Age and Geographic factors are displayed in Exhibits O.

Base Rates, i.e. Calibrated Plan Adjusted Index Rates, are found on Exhibit P.

# **AV Metal Values**

The AV Metal Values included in Worksheet 2 of the URRT were based on the federally issued AV Calculator.

# **AV Pricing Values**

All AV Pricing values were developed using KHPC's actuarial cost model and actuarial judgment as described in section Paid to Allowed above. Differences in health status are not included.

# **Projected Loss Ratio**

See Exhibit I for the projected loss ratio calculation. The projected loss ratio is calculated using the federally prescribed MLR methodology.

# **Membership Projection**

The membership projections found in Worksheet 2 of the URRT were developed by assuming that moderate growth and similar distribution to current.

# **Attachments and Examples**

# **Actuarial Statement**

I, ASA, MAAA, am of the opinion that this filing is in compliance with the applicable Federal and State Laws and Regulations concerning the Patient Protection and Affordable Care Act and the Health Care and Education Reconciliation Act of 2010.

I, ASA, MAAA, do hereby certify that:

- 1. This filing has been prepared in accordance with the following:
  - a. Actuarial Standard of Practice No. 5, "Health and Disability Claims"
  - b. Actuarial Standard of Practice No. 8, "Regulatory Filings for Rates and Financial Projections for Health Plans"
  - c. Actuarial Standard of Practice No. 12, "Risk Classification"
  - d. Actuarial Standard of Practice No. 23, "Data Quality"
  - e. Actuarial Standard of Practice No. 25, "Credibility Procedures Applicable to Accident and Health, Group Term Life, and Property/Casualty Coverage"
  - f. Actuarial Standard of Practice No. 26, "Compliance with Statutory and Regulatory Requirements for the Actuarial Certification of Small Employer Health Benefit Plans"
  - g. Actuarial Standard of Practice No. 41, "Actuarial Communications".

#### 2. The index rate is:

- a. Projected in compliance with all applicable state and federal statutes and regulations (45 CFR 156.80(d) (1)).
- b. Developed in compliance with the applicable Actuarial Standards of Practice.
- c. Reasonable in relation to the benefits provided and the population anticipated to be covered.
- d. Neither excessive nor deficient.
- e. Adjusted by only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) to generate plan level rates.
- 3. The percent of total premium that represents essential health benefits included in Worksheet 2, Sections III and IV were calculated in accordance with actuarial standards of practice.
- 4. The AV Calculator was used to determine the AV Metal Values shown in Worksheet 2 of the Part I Unified Rate Review Template for all plans, and in accordance with CFR 156.135(b)(2) as necessary. For any plan requiring an alternative method, the

development of the actuarial value is based on one of the acceptable alternative methods outlined in 156.135(b)(2) or 156.135(b)(3) for benefits that deviate substantially from the parameters of the AVC and have a material impact on the actuarial value.

- a. The analysis was
  - i. conducted by a member of the American Academy of Actuaries, and
  - ii. performed in accordance with generally accepted actuarial principles and methods.
- 5. All factor, benefit and other changes from the prior approved filing have been disclosed in the actuarial memorandum.
- 6. New plans cannot be considered modifications of existing plans under the uniform modification standards in 45 CFR 147.106.
- 7. The information presented in the PA Actuarial Memorandum and PA Actuarial Memorandum Rate Exhibits is consistent with the information presented in the 2019 Rate Filing Justification.

# **KEYSTONE HEALTH PLAN CENTRAL RFJ Part II – Consumer Friendly Justification**

#### Rate Decrease Considerations:

- Stabilization of the Individual market in recent years
- o Suspension of the Health Insurer Fee in 2019

Changes being requested are based upon consideration of the factors that influence future period cost structures. The primary drivers of change in future costs are:

- o Anticipated increase in facility and physician unit costs
- Anticipated changes in prescription drug unit costs
- Continuing change in utilization such as
  - Intensity of medical services rendered
  - Changes in place of service (e.g. continued migration of inpatient stays to outpatient setting)
  - Further migration from brand prescription drugs to generic prescription drugs
  - Favorable impacts of value based benefits designs
- o Prescription drug patent expirations and new to market brand drugs
- Leveraging associated with unchanged cost share components such as deductible and copays
- o Inflation adjustment to administrative expenses

2019 Rates Table Template v8.1	If you are in a community rating state, If you are not in a community rating state If Tobacco is Tobacco User/Non-Toba	red. To validate press Validate button or Ci select Family-Tier Rates under Rating Met ate, select Age-Based Rates under Rating cco User, you must give a rate for Tobacc eet button, or Ctrl + Shift + H. All plans mu	hod and fill in all columns. Method and provide an Individual Rate o Use and Non-Tobacco Use.

Re: Keystone Health Plan Central Individual Rates

Filing No 18-11

TOI Code: H15I Individual Health – Hospital/Surgical/Medical Expense

Sub-TOI Code: H15I.001 - Hospital/Surgical/Medical Expense

Filing Type: Rate

Dear :

KHPC received an objection letter from the Department dated June 15, 2018. KHPC is providing the following in response to the objection letter:

- Q&A written response
- Q&A exhibits
- Correction to List-Billed data file
- Correction to Actuarial Memo correction to 2017 rate SERFF filing number
- Correction to Memo Exhibits, Exhibit E Trend

These changes do not impact rates.

Manager, Actuarial Services Capital BlueCross

Enclosures

, FSA, MAAA, Senior Director, Actuarial Services
, ASA, MAAA, Vice President and Chief Actuary, Actuarial Services
, Corporate Counsel

### KEYSTONE HEALTH PLAN CENTRAL, INC.

### Question and Answer Individual Rates Effective January 1, 2019

With this response, please find corresponding Q&A Exhibits in Ind\_18-11\_Initial\_KHP\_HMO\_Q&AExhibits1\_Supporting\_20180622.xlsx

**Question 1.** Please answer the following questions regarding the trend factors used (tab "Exhibit E Trend"):

- a. The leveraging calculation assumes all member cost sharing is static ("Fixed Cost Share" column on tab "Exhibit E1\_Lever"), but all plans have benefits which are subject to the deductible and/or coinsurance which would increase, to some extent, with allowed costs. Please explain why you think it is appropriate to assume all cost sharing is static.
- b. The leveraging calculation in "ExhibitE1\_Lever" assumes allowed cost sharing is 5.5%. However, in the Raw Trends shown in "Exhibit E\_Trend" none of the service categories have trends that high, and the weighted average, including drug but not dental/vision, appears to be closer to 5.3%. Please provide an explanation for why you used 5.5% in the calculation and a quantitative build-up of the 5.5% if it is not changing.
- c. The leveraging calculation in "ExhbitE1\_Lever" compares projected paid costs by month to a plan with zero cost sharing (essentially an allowed amount since there is no cost sharing). However, it does not appear as if induced utilization is accounted for in the calculation. Based on the HHS curve, a zero cost sharing plan (1.00 AV) would have 24% higher utilization and, as a result, 24% higher allowed costs than a bronze plan (0.60 AV). Please provide an explanation for why induced utilization is not accounted for in the calculation.
- d. Please provide a quantitative buildup of the "leveraging adjustment" for the drug trend.
- e. Please provide a quantitative buildup of the "pipeline adjustment" for the drug trend and describe the adjustment and why it is necessary.
- f. Please explain the following regarding the dental and vision trends:
  - i. Please provide an explanation on the development of the final cost and utilization trends shown in cells B14 and C14 of the "Exhibit E Trend" tab.
  - ii. Please provide an explanation on how the composite factor shown in cell C31 relates to the raw trends in cells B31 and C31.
- g. The final trends shown in cells B8:C14 tie to the trends on WS1 of the URRT as well as the rate development on tab "II Rate Development & Change." These trends are applied to allowed claims. Please explain why you think it is necessary to make an adjustment to account for paid claim trend leveraging when trending allowed claims forward.
- h. Please provide an explanation and quantitative buildup of the induced demand adjustment. Include an explanation regarding how the higher utilization and, as a result, higher paid costs are accounted for in the calculation of the leveraging factor.

#### Answer 1.

- a. While, in some cases, the amount the consumer pays out of pocket increases as allowed claims increase, the consumer-paid percentage-of-total decreases due to fixed dollar cost-sharing such as deductible and copayments. For a member with a \$2,000 deductible, incurring \$1000 in allowed claims year 1 and \$1100 in year 2 (10% allowed trend, for example), their cost-sharing increased, and they paid 100% of allowed claims in both years. But if that same member incurred \$5,000 in allowed claims year 1 (paid \$2,000 in deductible), and \$5,500 year 2, the insurer's paid trend is 3,500/3,000 -1 = 17%, and the member's out-of-pocket trend is 0%. This is because the member's percentage-of-total out-of-pocket expenses decrease when fixed deductibles and copays apply. The leveraging calculation factors in all scenarios, showing the average impact of cost-sharing on a large population, measuring in aggregate how paid claims rise faster than allowed as the insurer percentage-of-total claims rises over time.
- b. For this example, 5.5% allowed trend is used because it falls within the range of reasonable allowed trends. This small group filing is requesting a lower than average trend due to competitive pressures. While the raw trend shows 5.3%, induced demand drives that trend up 3 points.
- c. This calculation uses CBC's internal manual cost model to determine benefit relativities. While this model accounts for induced utilization as cost-sharing decreases, it does not use the same assumptions as the AV calculator
- d. For Individual business, medical and Rx deductible are combined, and the average AV is Silver (approx. \$5,000 deductible on average). These larger deductibles applied to Rx creates leveraging values between 2% and 4%. Please see Q&A Exhibit 1 for a comparison of paid and allowed trends by market segment. While Individual historical trends do not reflect pricing trend (the high trend is attributable to a changes in morbidity), the difference between paid and allowed is 3%, attributable to leveraging.
- e. The pipeline adjustment is used to account for new drugs expected to enter the market in 2019. Since these drugs are new, their cost is not accounted for in the BEP. CBC has compiled pipeline reports from our PBM and Specialty Rx vendor to quantify which drugs could potentially be entering the market in 2019. While there are many unknowns as to which drugs will become available and utilization of those drugs, through this process, the group decided to apply 1% pipeline to the group market. For the individual market, it is reasonable to assume a higher pipeline adjustment due to higher specialty trend (the vast majority of pipeline drugs are specialty low incidence, high cost). Please see Q&A Exhibit 2 for specialty trend by market segment.

f.

- i. We applied standard pricing trend to dental and vision. Because Individual and Small Group enrollment has fluctuated, and embedded pediatric dental and vision coverage is fairly new to the market, it is difficult to estimate changes in utilization and mix of services. Due to these factors, 3% pricing trend is applied to these components.
- ii. The composite dental and vision trend is not correct. It is being corrected with this submission.

- g. While it is not necessary to apply paid trends to allowed claims, the format of the exhibits makes it preferable to do so. If I apply allowed trends to allowed claims, and paid trends to paid claims, the final proposed rates do not change, only the paid-to-allowed ratio changes.
- h. Induced Utilization: Induced utilization is CBC's best estimate for increased utilization in the individual market due to unknown future regulatory changes. CBC predicts that consumers will use more services in 2019 due to unknown coverage status in 2020. Association Health Plans also play a role in driving out healthier individuals from the ACA-compliant market, resulting in higher utilization trends over time. While induced utilization is not explicitly included in the leveraging calculation, it is reasonable to assume that induced utilization could further drive leveraging (paid costs).

**Question 2**. Please provide support for the assumption that all members with less than \$350 PMPM in paid costs, and only those members would move to a narrow network competitor between the experience and projection period.

Answer 2. Exhibit F1 – Risk Score Deficiency Calculation is designed to show how healthier members leaving the ACA pool completely (Association Health Plans) or moving to competitor's narrow network plans impact claim and risk scores differently, resulting is risk adjustment deficiency. The example was used to show the impact if the healthiest members (members with claims < \$350/year) left CBC. But the data shows that this difference in risk and claims is not only attributable to that one scenario. It is unlikely that a member that regularly uses services, has a known health issues, or expects to have a high cost service(s) in the upcoming year will move to a narrow network plan, with the risk of surprise high out-of-pocket costs and/or changing a trusted doctor. Individual market allows each consumer to make choices based on their own needs, so only healthy members will take the chance of a narrow network.

The example used (members with claims < \$350/year) shows a morbidity factor of 1.18 is justifiable. But the 1.10 morbidity (in addition to 1.06 for individual mandate) is applied in rating.

**Question 3**. Please provide quantitative and qualitative support for the 0.920 network factor on the "III Plan Rates" tab.

**Answer 3.** KHPC does not apply a network factors to any of its plans.

**Question 4.** Please provide the quantitative and qualitative development of the projected 2019 risk adjustment payment of \$42.00 shown in Exhibit K.

**Answer 4.** The PID released projected 2017 RA estimates in May of -\$174.13 PMPM. KHPC is submitting an estimate of -\$191.54 PMPM (10% annual increase 2019 over 2017) with the following considerations in mind:

a) With significant annual premium increases 2017-2018, and KHPC only offering plans off-exchange (no subsidies), and only offering Bronze and Catastrophic plans, we will

- continue to see the healthiest members move into these plans, causing risk adjustment payments to continue to rise.
- b) Capital BlueCross is a small plan with limited resources. The industry has commercially available services to improve coding efforts through exhaustive use of data and provider outreach programs. While CBC is engaged in the efforts of accurate, timely submission of RA data, we feel that the industry will outpace CBC in its ability to maximize value going into 2019.
- c) Internal coding difficulties: CBC's individual ACA book of business has had a churn rate that has made a multi-year perspective of member diagnosis and risk impossible. As of 2016, CBC had 70,000 members. In 2017, 50% of CBC Individual ACA business dropped coverage, and CBC gained roughly 30,000 new members. And in 2018, CBC lost 20,000 members and gained 10,000 new members. This places CBC at a disadvantage in terms of ability to assess a member's ability to assess a member's risk. Since risk adjustment, closing gaps in care and coding, and a myriad of other risk adjustment functions require more than a single year of data to facilitate an accurate depiction of risk, it is believe that CBC is disadvantaged in the market. The amount is ultimately unknown, but it is estimated that it will have an unfavorable impact.

**Question 5.** Please provide an explanation for the why the "Benefit Richness (induced demand)" information in column L of the "III Plan Rates" tab does not result in a weighted average factor of 1.0 as directed in the Rate Filing Guidance.

**Answer 5.** The induced demand factor is designed to adjust the AV and Cost-Sharing factors so that, in aggregate, they equate to the Paid-to-Allowed ratio. In this filing, the AV and Cost-Sharing factors aggregate to 0.66. But the Paid-to-Allowed ratio is 0.72. The induced demand factor of 1.10 is applied to 0.66 to bring claims up to 0.72 level.  $0.66 \times 1.1 = 0.72$ . So projected claims by plan aggregate to equal projected claims calculated in total. Projected claims were not increased by applying induced demand (impact of 1.0), which is demonstrated in the fact that projected claims = [allowed claims] x [average AV and cost-sharing factor] x [average induced demand]. This is demonstrated in Table B.

**Question 6.** Please review and update your calculation of the "List-Billed Adjustment for Max 3 Children" as the work provided has factors in column N which are different than those in column M even when there are 3 or fewer children (e.g., rows 8 and 612).

**Answer 6.** The List-Billed Adjustment for Max 3 Children file has been corrected with this response.

**Question 7.** The Federal Income Tax in "Exhibit H\_Ret" is calculated as a subset of the Contingency amount (21% of the 2% Contingency). However, it is included in the rate development as an amount in addition to the 2% Contingency amount. Please provide an explanation as to why this approach is appropriate and does not double-count the impact of Federal Income Tax.

**Answer 7.** Please see Q&A Exhibit 3 for an example of how federal income tax and contingency are applied to establish a net contingency (net of taxes) that is still less than 2%.

The example shows a premium build with and without federal income tax applied. While federal income tax is applied "below the line" or to operating margin, creating a circular calculation, the goal in the premium build is to apply an assumption that accounts for this item. In the first calculation, net contingency falls to 1.58%. The second calculation results in a net contingency of 1.91%, closer to the 2% goal.

**Question 8.** Please provide an explanation of why the "AV and Cost-Sharing Adjustment" factors (row 26 of Exhibit L) are consistently lower than, and in some cases significantly lower than, the midpoint of the metal level ranges (e.g., 0.80 for a Gold plan).

Answer 8. The Actuarial Value and Cost Sharing Adjustment is determined using CBC's actuarial cost model. CBC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a \$0 office visit copayment and a \$25 ER copayment. Given a particular benefit design (for example, \$20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a claim PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on CPDs, where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.

CBC's model values high deductibles, by adjusting utilization, at a higher value than the AV calculator, creating consistently lower pricing AVs.

**Question 9.** Each response to a Department data call must contain a cover letter that details the changes made to the PA Actuarial Memorandum Exhibits and the reasons why the changes were made, e.g., in response to Department question number 5.

**Answer 9.** A cover letter is being provided with this response.

**Question 10.** Please confirm that you have tested to ensure that the rates in Table 11 of the Actuarial Memorandum Exhibits, the PA Plan Design Summary and Rate Tables, the Federal Rates Template, and in the binder are identical.

**Answer 10.** I confirm that I have tested to ensure the rates in Table 11 of the Actuarial Memorandum Exhibits, the PA Plan Design Summary and Rate Tables, the Federal Rates Template, and in the binder are identical.

**Question 11.** For the expanded bronze plans, please demonstrate that the copay is less than or equal to 50% coinsurance for that category.

**Answer 11.** The expanded bronze plan meets requirements under 45 CFR 156.140(c) because the plan covers specialty drugs at 50% coinsurance.

**Question 12.** Page 2 of the actuarial memo list a SERFF number for the rate filing effective 1/1/2017 that is incorrect. The SERFF number actually reference a form filing. Please correct this.

**Answer 12.** Changes have been made to the actuarial memo.

Question 13. In the 2019 Guidance published on the Department's website, the Department required that all issuers file uniform factors for the Individual Adjustment of 1.06 and the CSR Defunding Adjustment of 1.28. In addition, the Department indicated that as the rate review process moves forward and federal healthcare reform efforts are clarified, the Department would consider issuer specific requests. We can now advise that the aforementioned factors of 1.06 for the Individual Adjustment and 1.28 for CSR Defunding Adjustment constitute ceilings. If your company desires lower adjustments than those stated in the Department's 2019 Guidance, you may provide updated materials (PA Actuarial Memorandum and Exhibits, Part III Actuarial Memorandum, Part I URRT and corresponding rate tables – State and Federal) and justification for the lower Adjustment factor(s) with your first round response due June 22, 2018. The Department will not consider adjustment factors greater than those stated in the 2019 Guidance.

**Answer 13.** KHPC will continue to apply the recommended factors. No changes are being made.

### KEYSTONE HEALTH PLAN CENTRAL, INC.

### Question and Answer Individual Rates Effective January 1, 2019

#### **Questions from Actuarial Consultant:**

**Question 1.** In response to Question 1a you state the leveraging calculation represents the "average impact of cost sharing on a large population." This calculation assumes zero increase to member cost sharing from year to year. Your explanation indicates some members may see no change to their cost sharing (members with allowed claims over the deductible in your example) and some members would see increases to their cost sharing (members with allowed claims under the deductible in your example). Please provide quantitative support for the assumption that there is no change to the average member cost sharing percentage as that would assume all members had allowed claims above their deductible amount.

**Answer 1.** In reviewing the calculation, I see how the fixed cost sharing column did not account for member cost share increases as allowed claims increase. Exhibit E1\_Lever has been updated to account for trend in member cost share. The assumption is that 20% of members see increase in their cost sharing due to allowed trend, or  $5.5\% \times 0.2 = 1.1\%$  annual trend. With this change, leveraging is reduced from 4.5% to 3.6%.

**Question 2**. In response to Question 1b you state induced demand drives raw trend up by 3 points. The induced demand shown on the "Exhibit E\_Trend" tab only shows induced demand at 1%. Please explain this discrepancy.

**Answer 2.** The response to Question 1b mistakenly said 3% for induced demand. Induced demand does account for 1%.

**Question 3**. In response to Question 1c you state your "model accounts for induced utilization as cost-sharing decreases." However, in your calculation of the "Implied AV" on the "Exhibit E1\_Lever" tab, the paid PMPM amount is always divided by the allowed amount for a plan with no cost sharing. This calculation does not appear to account for the lower allowed amount which would occur for leaner plans because of induced utilization. Please provide quantitative support for how the "Implied AV" amounts account for induced utilization when compared to a plan with no cost sharing or update the calculation accordingly if they currently do not.

**Answer 3.** In reviewing the calculation, induced utilization is not explicitly shown, as the allowed amount is static for all months. While Exhibit E1\_Lever originally showed several months of data, the calculation only uses the most current month (201803). So to simplify the exhibit, I've removed the months prior to 201803. The implied AVs (developed in conjunction with the Zero Cost Share Manual rate) for that month are correct. The new exhibit also incorporates an annual increase in member cost share, as noted above.

**Question 4.** In response to Question 1f you updated the total composite trend for Dental and Vision to be 3%. It appears cost trend and utilization trend are still not consistent between rows 31 and 14 of the 'Exhibit E\_Trend' tab. Please provide an explanation for which is the correct assumption and please ensure all other pricing and documentation files match, as this could have a slight impact on final rates.

**Answer 4.** With this submission, Exhibit E\_Trend has been corrected to be consistent between rows 31 and 14.

**Question 5.** The Individual Adjustment factor prescribed by the Pennsylvania Insurance Department is a maximum of 1.06 and includes the impact of the \$0 individual mandate penalty, association health plans, and short term limited duration policies. In response to Question 2 you state the 1.10 morbidity factor separately applied includes the impact of association health plans. Please remove the portion of the morbidity factor caused by association health plans as they are prescribed to be included in the 1.06 morbidity factor separately included in the rate development.

**Answer 5.** My previous response mistakenly implied that KHPC applied a morbidity factor of 1.10 to its rate calculation. No morbidity factor (in addition to the Department's prescribed 1.06) was applied. I believe the question was meant to apply to CAAC. My response has been clarified in the CAAC second response.

**Question 6.** Please answer the following question regarding your response to Question 2 (morbidity assumption of 1.10):

- a. What historical benchmarks, experience, and/or studies did you use to determine which members will move to a competitor's narrow network plan?
- b. What is the justification for assuming only the lowest cost members, and no one else, will move to a competitor's narrow network plan?
- c. How was year-over-year reversion to the mean (i.e., a member with high claim costs in one year will have lower claim costs the next year) accounted for in the development of the factor?

**Answer 6.** KHPC did not apply a morbidity adjustment in addition to the Department's prescribed adjustment of 1.06.

**Question 7.** Thank you for correcting the List-Billed Adjustment file. Please explain why this change did not have a resulting impact on rates.

**Answer 7.** With this submission, the filing has been updated to include the impact of the List-Billed factor change.

#### **Questions for PID:**

- **Question 1.** Each response to a Department data call must contain a cover letter that details the changes made to the PA Actuarial Memorandum Exhibits and the reasons why the changes were made, e.g., in response to Department question number 5.
- **Answer 1.** A cover letter is being provided with this response.
- **Question 2.** Please confirm that you have tested to ensure that the rates in Table 11 of the Actuarial Memorandum Exhibits, the PA Plan Design Summary and Rate Tables, the Federal Rates Template, and in the binder are identical.
- **Answer 2.** I confirm that I have tested to ensure the rates in Table 11 of the Actuarial Memorandum Exhibits, the PA Plan Design Summary and Rate Tables, the Federal Rates Template, and in the binder are identical.
- **Question 3.** Responses to the second round of questions are due July 13, 2018. No modifications other than risk adjustment due to the Federal Risk Adjustment Report and Department requested changes will be accepted.
- **Answer 3.** With this submission, only changes requested by the Department have been made.

With this response, please find corresponding Q&A Exhibits in Ind\_18-11\_Initial\_KHP\_HMO\_Q&AExhibits3\_Supporting\_20180719.xlsx

### **Questions from Actuarial Consultant:**

**Question 1.** In response to Question 1, you applied an adjustment to the calculation in the "Exhibit E1\_Lever" tab to increase member cost sharing only 0.2% for every 1.0% increase in allowed costs. Please provide quantitative support for this assumption.

Answer 1. Please see Q&A Exhibit 1 for a new calculation of leveraging. In order to determine the future impact of leveraging, including the impact of increasing cost sharing due to allowed costs rising, I'm showing a claim probability distribution with allowed amounts by range. The data is for 2017 CBC ACA single risk pool population. While, the Individual average AV displayed in Exhibit E1 – Leveraging is 55%, that AV seemed too low when applying it the CBC's ACA data. So, I applied a more reasonable average AV of 70%. From that, I can infer that a deductible (applying to all services) of \$5,519 is equal to 70% AV for this population. Using that deductible amount, I can measure incurred claims and member cost-sharing trend, given an allowed trend of 6.5%. Please note that allowed trend has been increased from 5.5% to 6.5% to account for higher utilization trends seen in the Individual market compared to the Small Group market. Claims are trended in a database in order to move claims into the correct buckets as they trend. You can see that the total allowed amounts are increasing at 6.5% annually (columns O and X). Given the deductible and allowed trend, incurred claims trend at 8.1%, member cost-share at 2.8% and leveraging is 8.1%-6.5% = 1.6%. Exhibit E1 – Leveraging and Exhibit E – Trend are updated to reflect this revised amount.

Question 2. In response to Question 3 you state that "induced utilization is not explicitly shown, as the allowed amount is static for all months" in the calculation on the "Exhibit E1\_Lever" tab. Our understanding with this calculation is that the paid amounts (\$264.53 in 201803) is reflective of the average manual rate paid costs based on Capital's internal model and the allowed amount (\$479.20) is reflective of a plan with no cost sharing (1.000 AV). The member cost sharing amount is then calculated by subtracting the paid amount from the allowed amount (\$479.20 - \$264.53 = \$214.67). This subtraction assumes that the allowed amount for the mix of plans underlying each month is the same as the allowed amount for a plan with no cost sharing and does not account for induced utilization differences. As an example, a silver plan (0.700 AV) would have 17% lower utilization and allowed costs than a plan with no cost sharing (1.000 AV) if using the HHS induced demand factors. By not accounting for induced utilization in the allowed amounts, the member cost sharing amounts are being overstated, which then increases the calculated impact of leveraging. Please update the "Exhibit E1\_Lever" to calculate member cost sharing based on allowed amounts reflective of the plan mix underlying each month instead

of allowed amounts reflective of a plan with no cost sharing or provide support for how induced utilization is accurately being accounted for in the current calculation.

**Answer 2.** Based on the calculation found in Q&A Exhibit 1, I have updated the 201803 AV to 70%. In order to accommodate this change, I have changed the allowed amount to \$377.91. 70% AV seems to be reasonable given KHPC subsidiary, CAAC's, paid-to-allowed ratio of 72%, with lower AVs in KHPC and CAIC. Leveraging is applied equally to trend across CAAC, CAIC and KHPC even though CAIC and KHPC offer lower AV plans.

#### **Questions for PID:**

**Question 1.** Each response to a Department data call must contain a cover letter that details the changes made to the PA Actuarial Memorandum Exhibits and the reasons why the changes were made, e.g., in response to Department question number 5.

**Answer 1.** A cover letter is being provided with this response, with details around the changes.

**Question 2.** Please confirm that you have tested to ensure that the rates in Table 11 of the Actuarial Memorandum Exhibits, the PA Plan Design Summary and Rate Tables, the Federal Rates Template, and in the binder are identical.

**Answer 2.** As discussed, Table 11 of the Actuarial Memorandum Exhibits are being updated with this submission. PA Plan Design Summary and Rate Tables and the Federal Rates Template will be updated at a future date. At that time, we will ensure that all templates are identical.
