RE: Keystone Health Plan East Individual HMO Rate Filing effective 1/1/2019 INAC-131476931

Dear Ms. Gray:

Attached is a revised 2019 annual rate filing for HMO plans of Keystone Health Plan East (KHPE) in the Individual (non-group) marketplace in the Commonwealth of Pennsylvania. Rates for new and renewing plans are being filed and satisfy market reform requirements of the Affordable Care Act (ACA).

This rate filing includes rates for these plans and specifies compliance with rating requirements of the ACA. The enclosed is for rating periods effective from January 1, 2019 through December 31, 2019.

Per the guidance provided by the Pennsylvania Insurance Department, we adjusted the morbidity factor in consideration of changes to the individual mandate penalties. We also included a component for the impact of non-payment of CSR costs per our discussions with the department.

The proposed rates represent a 9.9% increase over the previously approved 2018 rates. This increase incorporates the state's estimate for the value of the individual mandate and CSRs not being funded. If we were to use our own estimates for these factors, the resulting increase would be 3.1%. We intend to request the ability to refile using our own factors to achieve the lower increase.

Rate Change Summary

Keystone Health Plan East – Individual Plans

Rate request filing ID INAC-131476931 - This document is prepared by the insurance company submitting the rate filing as a consumer tool to help explain the rate filing. It is not intended to describe or include all factors or information considered in the review process. For more information, see the filing at http://www.insurance.pa.gov/Consumers/ACARelatedFilings/

Overview

Initial requested average rate change: -1.7%¹
Revised requested average rate change: N/A¹

Range of requested rate change: -5.0% to -0.3% Effective date: January 1, 2019

People impacted: 154,539 Available in: Area 8

Key information

Jan. 2017-Dec. 2017 financial experience

Company made (after taxes)	\$34,087,772
Taxes & fees	\$31,261,881
Administrative expenses	\$112,709,200
Claims	\$576,470,400
Premiums	\$754,529,253

How it plans to spend your premium

This is how the insurance company plans to spend the premium it collects in 2019:

85 %
12%
1%
2%

The company expects its annual medical costs to increase 10.2%.

Explanation of requested rate change

Keystone Health Plan East ("KHPE") is revising premium rates for the Pennsylvania Consumer ACA compliant products, effective from January 1, 2019.

About 155,000 members will be affected.

Changes in Medical Service Costs:

Premium rates for health care insurance are increasing as the cost of health care service rise. Health care service costs increase as health care providers increase their fees, members use more health care services and supplies, and the types of health care services and supplies change, among other factors.

Changes include updates for individual mandate penalties and non-funding of CSR payments as well as

¹ Note that insurers will have the opportunity to revise their rate change request in July, after they are scheduled to receive updated information about the impact of a federal program called risk adjustment. This document will be updated accordingly at that time.

changes in health care service costs driven by changes to health care provider fees.

Financial Experience of the Product:

KHPE is required by federal law to pay out a minimum of 80% percent of premium dollars for medical claims—this is referred to as the minimum Medical Loss Ratio (MLR). The rate action proposed in this filing is expected to achieve a Medical Loss Ratio of greater than 80% using the state's estimates for individual mandate and CSRs not being funded.

Changes in Benefits:

Some plan benefits are mandated by federal and state law. Benefit changes for some plans were also made. All changes in benefits are in compliance with the uniform modifications rules stipulated by the Federal government.

Administrative Costs:

In addition, the Affordable Care Act (ACA) imposes taxes and other levies.

PENNSYLVANIA ACTUARIAL MEMORANDUM

PURPOSES

This Actuarial Memorandum is provided along with the Unified Rate Review Template (URRT) and PA Actuarial Memorandum Rate Exhibits to provide certain information to support the gross premium for the single risk pool for individual market health care insurance underwritten by Keystone Health Plan East in the Commonwealth of Pennsylvania. It is provided as a component of a state rate filing. This submission may not be appropriate for other purposes.

1. BASIC INFORMATION AND DATA

A. COMPANY INFORMATION

Company Legal Name: Keystone Health Plan East ("KHPE")

State: Pennsylvania

NAIC #: 95056
Market: Individual

Marketplace: On and Off Exchange

Effective Date(s): 1/1/2019 – 12/31/2019

Average Rate Change: -1.7%

Range of Rate Changes: -5.0% to -0.3%

Products: HMO

Rating Areas: Rating Area 8

Metal Levels: Platinum, Gold, Silver, Bronze

Current Members: 154,539
Current Policyholders: 105,575
Number of 2019 Plans: 12
HIOS Issuer ID (5-digit): 33871

Worksheet 1 of the accompanying URRT contains experience period data and development of the projected Single Risk Pool Gross Premium Average Rate PMPM for the individual market for KHPE. Worksheet 2 contains experience period data and projections by product for the single risk pool for the same entities. This memorandum pertains only to plans denoted in Worksheet 2 by Plan IDs starting with the sequence 33871.

Primary Contact Email Address:

B. RATE HISTORY AND PROPOSED VARIATIONS IN RATE CHANGES

January 1, 2015	14.90%	INAC- 129626130
January 1, 2016	1.91%	INAC- 129936718
January 1, 2017	27.97%	INAC- 130539671
January 1, 2018	21.70%	INAC- 131145975

The historical rate changes varied by metallic tier based on plan benefits as illustrated via the Pricing AV.

Proposed rate changes may vary by metallic tier and plan based on plan benefit changes.

C. AVERAGE RATE CHANGE

The average proposed rate change shown in Cell AC15 of Table 10 is -1.7%. The changes to the single risk pool gross premium average rate per member per month (PMPM) from calendar year 2017 to calendar year 2019 are incorporated into the pricing and reflected in the Unified Rate Review Template.

The change in 21-year-old Non-Tobacco Premium PMPM calculated in Table 11, Cell AN13 is -1.8%. The change shown in Cell V45 of Worksheet 1 of URRT Part I is 19.76%. The change shown in Cell V46 of Worksheet 1 of URRT Part I is 9.44%.

D. MEMBERSHIP COUNT

Table 1 illustrates the Experience Period member-months, Current Period members as of February 1, 2018, and Projected Rating Period Member-months by ages.

E. BENEFIT CHANGES

Benefit changes were made to the following plans to assure compliance with Actuarial Value Requirements, including differences that resulted from changes to the AV Calculator. The basis for pricing changes was our internal pricing model.

F. EXPERIENCE PERIOD CLAIMS AND PREMIUMS

Table 2 illustrates the experience period claims and premiums using calendar year data. The data is consistent with the data reported in Section 1 of Worksheet I of the URRT.

Experience period premium, claims, and member months are obtained from the company's internal data warehouse. The claims data is collected for incurred dates from January through December 2017 and paid through February 2018. Earned premiums and member months are for January through December 2017. The data are for all direct-written individual business of KHPE in the Commonwealth of Pennsylvania, including out-of-network claims written by KHPE but paid by QCC for POS plans. No private reinsurance was applicable.

Projected Risk Adjustment PMPM

Non-EHB benefits are illustrated separately in cell H36 of Table 2. Capitation is uniform by age for the experience period. Net pharmacy rebates are illustrated in cell I36 of Table 2.

Projected Risk Adjustment is accounted for in Projected Incurred Claims before ACA Reinsurance and Risk Adjustment to reflect anticipated risk adjustment transfer amounts for the projection period. The amount reflects the projected morbidity for the single risk pool for IBCFOC in the projection period.

The estimated risk adjustment revenue for all of the plans in the risk pool is developed using the following methodology. We recognize that the HHS payment transfer formula implies that the projected incurred claims based solely on the experience period single risk pool claims need to be adjusted by the ratio of the current statewide market's risk relative to allowable rating factor (ARF) for age compared to the single risk pool's risk relative to ARF presented during the experience period. This adjustment, together with the assumed future changes in population risk morbidity, results in the issuer's pricing being consistent with the anticipated morbidity level of the future statewide market.

The anticipated risk adjustment transfer revenue is allocated proportionally based on plan premium. The Projected Risk Adjustment is subtracted from Projected Incurred Claims before ACA Risk Adjustment to reflect anticipated receipt of risk adjustment transfer amounts for the projection period.

When the projected risk adjustment amounts for KHPE and Independence Blue Cross (QCC) are combined, the result is consistent with the projection made in our submission. We also considered preliminary 2017 risk transfer results.

G. CREDIBILITY OF DATA

The experience period data is considered 100% credible.

H. TREND IDENTIFICATION

Table 3 identifies the proposed annual medical and prescription drug allowed claims cost and utilization trends. These data match the data illustrated in Section 2 of Worksheet I of the URRT. Additional discussion is provided in Section I, Historical Experience.

We observed significantly lower than expected experience in the first half of 2017. We have updated our trends to reflect that the low first half utilization will not repeat in 2018 and 2019. Specifically, we expect the first half of 2019 to be similar to what we are seeing in the first half of 2018.

I. HISTORICAL EXPERIENCE

Table 4 illustrates historical experience from 2014 through 2017 for the product line.

a. Annualized Cost Trend

Annual cost trend reflects changes in costs of medical treatment due to medical inflation and changes in the distribution of services across network providers. The trend value is developed by reviewing historical medical costs for the single risk pool and adjusting them for anticipated future provider contracting reimbursement levels. The data is normalized for changes in age, benefit changes during the experience period, changes to provider contracts, and prescription drug formulary, and new drugs brought to market.

b. Annualized Utilization Trend

Annual utilization trend reflects the change in the number of units per 1,000 members for a fixed level of illness burden and includes changes due to the mix and intensity of services provided and changes related to shifts in product mix. It also includes effects of selection, if any, since this cannot be reflected in the relative cost of the various products and plans offered.

J. TERMINATED PLANS

No plans are being terminated during 2019.

2. RATE DEVELOPMENT AND CHANGE

A. DEVELOPMENT OF PROJECTED INDEX RATE, MARKET-ADJUSTED INDEX RATE, & TOTAL ALLOWED CLAIMS

Table 5 illustrates the development of the Projected Index Rate and Market-Adjusted Index Rate beginning with the Experience Period Index Rate. Exhibit A provides additional information about the adjustment factors.

Changes in Population Risk Morbidity

Experience period allowed claims are adjusted to account for differences in the average morbidity of the single risk pool population underlying the experience and the anticipated population in the projection period. This adjustment reflects changes in the individual market-wide morbidity.

Changes in Other Factors

Experience period allowed claims are adjusted to account for differences in the single risk pool population underlying the experience and the anticipated population in the projection period pertaining to several factors not due to changes in morbidity or the costs and utilization of medical care. This adjustment reflects: additional benefits required to be covered as essential health benefits; recently mandated benefits required by state law that are not reflected in the experience period data; benefits in the experience that are removed for the projection period; anticipated changes in the average utilization of services due to differences in average cost sharing requirements during the experience period and average cost sharing requirements in the projection period; changes in demographic characteristics of the single risk pool experience period population and the projection period population (including age, gender, region, and tobacco use); changes in the provider network (adding or removing a provider system or introducing a limited network option); and anticipated changes in pharmacy rebates.

Table 5 of the Actuarial Memorandum Rate Exhibit shows the components used in calculating change in other. The calculations of the components are based on the changes in values shown in Table 7.

CSR payments are funded through premiums in this filing. The additional cost to provide the CSRs is recognized in Column P of Table 10 of the Actuarial Memorandum Rate Exhibit. In URRT Part I, the cost is reflected in the Paid to Allowed factor. The Paid to Allowed factor in the URRT Part 1 is equal to the Paid to Allowed factor in Table 5 multiplied by the value in cell P15 of Table 10 of the Actuarial Memorandum Rate Exhibit.

Please note that the final marketing plan name shown in Table 10 of the Actuarial Memorandum Rate Exhibit for the Off-Exchange Silver plan that was added in this filing is not yet finalized at the time of this submission.

B. RETENTION ITEMS

Table 6 illustrates the retention items, expressed as percentages of premium. Consistent with conversations with our State regulator, no Pricing load was applied for the Managed Care Assessment levied pursuant to Article VIII-I of the Pennsylvania Code, as it will be separately reimbursed.

Administrative Expenses					
General and Claims	9.63%				
Agent/Broker Fees and Commissions	2.00%				
Quality Improvement Initiatives	0.80%				
Taxes and Fees		0.42%			
PCORI Fees	0.00%				
PA Premium Tax	0.00%				
Federal Income Tax	0.42%				
Health Insurance Providers Fee	0.00%				
Profit/Contingency		2.00%			
Total Retention		14.85%			

C. NORMALIZED MARKET-ADJUSTED PROJECTED ALLOWED TOTAL CLAIMS

Table 7 compares the normalization factors used in this filing to those used in the 2018 filing. The changes in the factors reflect small differences from the projected populations in 2018 and 2019.

D. COMPONENTS OF RATE CHANGE

Table 8 illustrates the components of rate change, based on inputs form other sections of the Rate Exhibits. The results in Row H are similar to the values in Row A of Table 8.

Data in Table 9 was taken from the 2018 URRT with the exceptions of Risk Adjustment and Reinsurance which were revised to project company-specific values.

3. PLAN RATE DEVELOPMENT

Table 10 is populated with plan information consistent with entries in the 2019 URRT. Plan mappings, where applicable, are illustrated in Column F of Table 10.

Attached to this actuarial memorandum are exhibits providing actuarial certifications for the use of alternate methods of calculating the Actuarial Value, where applicable, as well as required support for the calculations.

4. PLAN PREMIUM DEVELOPMENT FOR 21-YEAR OLD NON-TOBACCO USER

Table 11 is populated from other sections of the Rate Exhibits, along with the population by age and rating area for the Projection Period.

5. PLAN FACTORS

Tables 12, 13, and 14 illustrate the factors used in pricing for age, tobacco, geographic rating area, and network. The tobacco factors match the previously approved tobacco factors from the 2018 filing.

6. ACTUARIAL CERTIFICATION

I, am Director & Actuary of Commercial Markets for the Independence Blue Cross Family of Companies. I am a member of the Society of Actuaries and the American Academy of Actuaries with the education and experience necessary to perform the work necessary and meet the Qualification Standards of the American Academy of Actuaries to render the qualified actuarial opinion contained herein. The developed rates and memorandum have been prepared in conformity with appropriate Actuarial Standards of Practice and the Academy's Code of Professional Conduct.

The Part I Unified Rate Review Template does not demonstrate the process used by the issuer to develop the premium rates and allowable rating factors. Rather, it represents information required by Federal regulation to be provided in support of the review of gross premium rate increases, for certification of qualified health plans for Federally facilitated exchanges, and for certification that the index rate is developed in accordance with Federal regulation and used consistently and only adjusted by the allowable modifiers.

I hereby certify that, to the best of my knowledge and judgment, the following:

- The projected index rate is:
 - —In compliance with all applicable State and Federal Statutes and Regulations (45 CFR 156.08(d)(1) and 147.106);
 - —Developed in compliance with applicable Actuarial Standards of Practice;

- Reasonable in relation to the benefits provided and the population anticipated to be covered; and
- —Neither excessive nor deficient.
- The index rate and only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) were used to generate plan level rates.
- The percent of total premium that represents essential health benefits included in Worksheet 2, Sections III and IV were calculated in accordance with actuarial standards of practice.
- The AV Calculator was used to determine the AV Metal Values illustrated in Worksheet 2 of the Part I Unified Rate Review Template for all plans, unless an alternate methodology was required. If an alternate methodology was used to calculate the AV Metal Value for at least one plan offered, a copy of the actuarial certification required by 45 CFR Part 156, §156.135 will be included.
- All factor, benefit, and other changes from the prior approved filing have been disclosed in the actuarial memorandum.
- New plans cannot be considered modifications of existing plans under the uniform modification standards in 45 CFR 147.106.
- The information presented in the PA Actuarial Memorandum and PA Actuarial
 Memorandum Rate Exhibits is consistent with the information presented in the 2019 Rate
 Filing Justification.

URRT Part II – Consumer Friendly Justification

Scope and Range of the Rate Increase:

Keystone Health Plan East ("KHPE") is revising premium rates for the Pennsylvania Consumer ACA compliant products, effective from January 1, 2019. The proposed revisions to each plan are shown on the second page of this exhibit.

About 155,000 members will be affected.

Financial Experience of the Product:

KHPE is required by federal law to pay out a minimum of 80% percent of premium dollars for medical claims—this is referred to as the minimum Medical Loss Ratio (MLR). The rate action proposed in this filing is expected to achieve a Medical Loss Ratio of greater than 80% using the state's estimates for individual mandate and CSRs not being funded.

Changes in Medical Service Costs:

Premium rates for health care insurance are increasing as the cost of health care service rise. Health care service costs increase as health care providers increase their fees, members use more health care services and supplies, and the types of health care services and supplies change, among other factors.

Changes include updates for individual mandate penalties and non-funding of CSR payments as well as changes in health care service costs driven by changes to health care provider fees.

Changes in Benefits:

Some plan benefits are mandated by federal and state law. Benefit changes for some plans were also made. All changes in benefits are in compliance with the uniform modifications rules stipulated by the Federal government.

Administrative Costs:

The premium rates presented in this filing include a 2% contribution to reserves. Furthermore, the Affordable Care Act (ACA) imposes taxes and other levies.

GENERAL OVERVIEW

PURPOSES

This Actuarial Memorandum is provided along with the Unified Rate Review Template (URRT) to provide certain information to support the gross premium for the single risk pool for individual market health care insurance underwritten by Keystone Health Plan East in the Commonwealth of Pennsylvania. It is provided as a component of an application for certification as a Qualified Health Plan and a state rate filing. This submission may not be appropriate for other purposes.

GENERAL INFORMATION

COMPANY IDENTIFYING INFORMATION

Company Legal Name: Keystone Health Plan East ("KHPE")

State: Pennsylvania

HIOS Issuer ID (5-digit): 33871
Market: Individual
Effective Date(s): 1/1/2019

Worksheet 1 of the accompanying URRT contains experience period data and development of the projected Single Risk Pool Gross Premium Average Rate PMPM for the individual market for KHPE. Worksheet 2 contains experience period data and projections by product for the single risk pool for the same entities.

COMPANY CONTACT INFORMATION

Primary Contact Email Address:

PROPOSED RATE INCREASE

The changes to the single risk pool gross premium average rate per member per month (PMPM) from calendar year 2017 to calendar year 2019 were incorporated into the pricing and reflected in the Unified Rate Review Template. The changes are driven by factors including: changes in market-wide population risk morbidity and covered services, increasing unit costs for medical services, increasing utilization of medical services, increasing fees and taxes imposed by the federal government, anticipated costs to administer the plan, and anticipated revenue or payments due to market-wide risk adjustment.

The weighted average increase across KHPE plans based on projected membership, inclusive of the impact of benefit and cost sharing changes, is -1.7%. The minimum increase is -5.0% and the maximum increase is -0.3%.

WORKSHEET 1: DATA COLLECTION TEMPLATE

SECTION I: EXPERIENCE PERIOD PREMIUM AND CLAIMS

PAID THROUGH DATE

Experience period premium, claims, and member months are obtained from the company's internal data warehouse. The claims data is collected for incurred dates from January through December 2017 and paid through February 2018. Earned premiums and member months are for January through December 2017. The data are for all direct-written individual business of KHPE in the Commonwealth of Pennsylvania, including out-of-network claims written by KHPE but paid by QCC for POS plans.

PREMIUMS (NET OF MLR REBATE) IN EXPERIENCE PERIOD

Earned Premiums (net of MLR Rebate) in Experience Period are developed by summing the earned premium reported in the company's internal data warehouse and adjusting for MLR rebates, if any, for the period. Although 2017 federal MLR rebate calculations are not final as of the writing of this memorandum, no federal MLR rebates are expected for calendar year 2017, so no adjustment to earned premium for MLR rebates is needed.

The calculation for federal minimum loss ratio rebates is based on 2015, 2016, and 2017 experience of earned premium, incurred claims, quality improvement expenses, and taxes. The three years of experience is blended for all segments.

ALLOWED AND INCURRED CLAIMS INCURRED DURING THE EXPERIENCE PERIOD

Paid-to-Date and Incurred Claims, and Member Months

Insurer fee-for-service claims expenses and member liabilities for dates of service in January 2017 through December 2017 and paid through February 2018 are sourced from the IBCFOC's internal data warehouse. The claims and member liabilities are completed with incurred but not reported (IBNR) adjustments to develop ultimate incurred insurer fee-for-service claims expenses and member liabilities for the January through December 2017 period. Capitation amounts are also sourced from the internal data warehouse for the January through December 2017 period but they are not adjusted for IBNR.

Allowed Claims

Allowed claims are determined by separately obtaining paid-to-date fee-for-service claims and member cost-sharing amounts, applying claim lag factors to those amounts to estimate ultimate incurred fee-for-service claims and member-sharing amounts and adding them together with capitation amounts.

Allowed claims do not include ineligible claims, payments for services other than medical care provided, recovery payments related to internal large claim pooling mechanisms, or active live reserves.

IBNR Development

Medical fee for service incurred but not reported (IBNR) claims are modeled through the use of standard claim lag methodologies. A range of results is developed, and a provision for adverse deviation is applied. The provision for adverse deviation is dependent on many factors such as stability, size, product mix, etc.

The completion factors are developed annually in the 2Q - 3Q period. We do not believe our IBNR is unusually high or unusually low for incurred 2017 paid through February 2018.

Experience Period Index Rate

The Index Rate of Experience Period is estimated by removing cost and utilization trend from the Index Rate for Projection Period.

SECTION II: ALLOWED CLAIMS, PMPM BASIS

BENEFIT CATEGORIES

Utilization and Unit Cost data for allowed claims in the experience period are provided in Section II. The data is provided by benefit category using a standardized indicator from the internal data warehouse that assigns each claim line to a category based on the type of provider and the location of the service. The utilization and unit cost data are provided for the following categories: Inpatient Hospital admits, Outpatient Hospital visits, Professional visits, Other Medical visits, Capitation per member per month (PMPM), and Prescription Drug scripts.

Experience Period capitation is reported as a per member per month (PMPM) value. In order to complete the URRT, the Utilization per 1,000 statistics for capitated services only is reported as 1,000 so that the appropriate capitation PMPM is reported.

PROJECTION FACTORS

The estimated incurred claims experience on an allowed basis for January 2017 through December 2017 is projected to the future rating period by several factors. Factors were calculated from the combined experience of QCC and KHPE.

Changes in Population Risk Morbidity

Experience period allowed claims are adjusted to account for differences in the average morbidity of the single risk pool population underlying the experience and the anticipated population in the projection period. This adjustment reflects changes in the individual market-wide morbidity.

Changes in Other Factors

Experience period allowed claims are adjusted to account for differences in the single risk pool population underlying the experience and the anticipated population in the projection period pertaining to several factors not due to changes in morbidity or the costs and utilization of medical care. This adjustment reflects: additional benefits required to be covered as essential health benefits; recently mandated benefits required by state law that are not reflected in the experience period data; benefits in the experience that are removed for the projection period; anticipated changes in the average utilization of services due to differences in average cost sharing requirements during the experience period and average cost sharing requirements in the projection period; changes in demographic characteristics of the single risk pool experience period population and the projection period population (including age, gender, region, and tobacco use); changes in the provider network (adding or removing a provider system or introducing a limited network option); and anticipated changes in pharmacy rebates.

Trend Factors

a. Annualized Cost Trend

Annual cost trend reflects changes in costs of medical treatment due to medical inflation and changes in the distribution of services across network providers. The trend value is developed by reviewing historical medical costs for the single risk pool and adjusting them for anticipated future provider contracting reimbursement levels. The data is normalized for changes in age, benefit changes during the experience period, changes to provider contracts, and prescription drug formulary, and new drugs brought to market.

b. Annualized Utilization Trend

Annual utilization trend reflects the change in the number of units per 1,000 members for a fixed level of illness burden and includes changes due to the mix and intensity of services provided and changes related to shifts in product mix. It also includes effects of selection, if any, since this cannot be reflected in the relative cost of the various products and plans offered.

CREDIBILITY MANUAL RATE DEVELOPMENT

The experience period claims for the single risk pool are determined to be fully credible; therefore no credibility adjustment is required.

SECTION III: PROJECTED EXPERIENCE

PAID TO ALLOWED RATIO

The Projected Allowed Experience Claims PMPM shown in Worksheet 1 represents projected allowed claims experience PMPM for the projected portfolio of plans. The Paid to Allowed Average Factor in

Projection Period adjusts the allowed down to Projected Incurred Claims before ACA reinsurance and risk adjustment for the population anticipated to be covered in the projection period. The Projected Incurred Claims before ACA reinsurance and risk adjustment represents the net amount of incurred insurer claim liability expected in the projection period, net of member cost sharing and cost sharing paid by HHS on behalf of low-income members. It reflects the average benefit level anticipated during the projection period. The ratio was calculated using incurred (before ACA reinsurance and risk adjustment) and allowed PMPMs from worksheet two of the URRT.

RISK ADJUSTMENT AND REINSURANCE

Projected Risk Adjustment PMPM

Projected Risk Adjustment is accounted for in Projected Incurred Claims before ACA Reinsurance and Risk Adjustment to reflect anticipated risk adjustment transfer amounts for the projection period. The amount reflects the projected morbidity for the single risk pool for IBCFOC in the projection period.

The estimated risk adjustment revenue for all of the plans in the risk pool is developed using the following methodology. We recognize that the HHS payment transfer formula implies that the projected incurred claims based solely on the experience period single risk pool claims need to be adjusted by the ratio of the current statewide market's risk relative to allowable rating factor (ARF) for age compared to the single risk pool's risk relative to ARF presented during the experience period. This adjustment, together with the assumed future changes in population risk morbidity, results in the issuer's pricing being consistent with the anticipated morbidity level of the future statewide market.

The anticipated risk adjustment transfer revenue is allocated proportionally based on plan premium. The Projected Risk Adjustment is subtracted from Projected Incurred Claims before ACA Risk Adjustment to reflect anticipated receipt of risk adjustment transfer amounts for the projection period.

When the projected risk adjustment amounts for KHPE and QCC are combined, the result is consistent with the projection made in our submission. We also considered preliminary 2017 risk transfer results.

Projected ACA Reinsurance Recoveries Net of Reinsurance Premium (Individual Market Only) With the expiration of the reinsurance program at the end of the 2016 benefit year, there are no projected reinsurance recoveries or reinsurance premium assumed in the rates.

NON-BENEFIT EXPENSES AND PROFIT & RISK

Administrative Expense Load

An Administrative Expense Load is applied to Projected Incurred Claims to reflect expenses related to quality improvement and fraud detection/recovery and other expenses of operating a business, broker commissions, and premium payment processing fees.

Profit & Risk Load/Contribution to Surplus

A Profit & Risk Load/Contribution to Surplus for the single risk pool is applied to Projected Incurred Claims for the projection period, if applicable.

Taxes and Fees

A Taxes & Fees load is applied to Projected Incurred Claims to pass through fees and taxes levied by the federal and state governments.

PROJECTED LOSS RATIO

The projected loss ratio for the single risk pool is estimated to exceed 80% reflecting premium adjustments permitted by the federal MLR calculation.

SINGLE RISK POOL

The single risk pool reflects all covered lives for every individual non-grandfathered product and plan combination for KHPE in the state of Pennsylvania. It is established according to the Single Risk Pool requirements in 45 CFR § 156.80(d).

INDEX RATE

The Index Rate is defined as the EHB portion of projected allowed claims divided by all projected single risk pool lives. The Index Rate is the same value for all non-grandfathered plans for KHPE Individual Plans in Pennsylvania. The Index Rate reflects the twelve month projection for calendar year 2018. It has been developed following the specifications of 45 CFR § 156.80(d)(1).

MARKET ADJUSTED INDEX RATE

The Market Adjusted Index rate is calculated as the Index Rate adjusted for all allowable market-wide modifiers defined in the market rating rules: federal reinsurance program adjustment, risk adjustment and exchange user fees. The Market Adjusted Index Rate reflects the average demographic characteristics of the single risk pool.

PLAN ADJUSTED INDEX RATE

The Plan Adjusted Index Rate is calculated as the issuer Market Adjusted Index Rate adjusted for all allowable plan level modifiers defined in the market rating rule. These include actuarial value and cost sharing adjustment, provider network, delivery system and utilization management adjustment, adjustment for benefits in addition to the EHBs, impact of specific eligibility categories for the catastrophic plan and administrative costs.

CALIBRATION

The plan adjusted index rate is projected for all products using the same anticipated age distribution and the mandated age curve. Therefore the consumer adjusted premium rate is the plan adjusted index rate divided by the average age, geographic and tobacco factors for the expected distribution. The average age of the combined individual risk pool population is 41.

The Average Age factor is the weighted average age factor based on the projected membership. The Tobacco Factor is calculated as the projected average factor for tobacco users multiplied by the projected tobacco use prevalence.

There is only one geographic rating area for this filing. The geographic rating area factor for this filing is 1.0.

WORKSHEET 2: PRODUCT-PLAN DATA COLLECTION

AV METAL VALUES

The AV Metal Values included in Worksheet 2 of the URRT were valued using the AV Calculator, where possible, otherwise the AV Metal Values were developed under an alternate methodology. Actuarial certifications required by 45 CFR Part 156, §156.135 are provided in a separate document.

AV PRICING VALUES

The AV Pricing Value represents the cumulative effect of adjustments made by plan to move from the Market Adjusted Index Rate to the Plan Adjusted Index Rate.

MEMBERSHIP PROJECTIONS

Enrollment is projected based on current and anticipated enrollment by plan. Items impacting these projections include changes in the size of the market due to introduction of guarantee issue requirements, the individual mandate, and the introduction of a Basic Health Program.

TERMINATED PLANS

No plans are being terminated during 2019.

WARNING ALERTS

There are no warning alerts in URRT Part 1.

ACTUARIAL CERTIFICATION

, am Director & Actuary of Commercial Markets for the Independence Blue Cross Family of Companies. I am a member of the Society of Actuaries and the American Academy of Actuaries with the education and experience necessary to perform the work necessary and meet the Qualification Standards of the American Academy of Actuaries to render the qualified actuarial opinion contained herein. The developed rates and memorandum have been prepared in conformity with appropriate Actuarial Standards of Practice and the Academy's Code of Professional Conduct.

The Part I Unified Rate Review Template does not demonstrate the process used by the issuer to develop the premium rates and allowable rating factors. Rather, it represents information required by Federal regulation to be provided in support of the review of gross premium rate increases, for certification of qualified health plans for Federally facilitated exchanges, and for certification that the index rate is developed in accordance with Federal regulation and used consistently and only adjusted by the allowable modifiers.

I hereby certify that, to the best of my knowledge and judgment, the following:

- The projected index rate is:
 - —In compliance with all applicable State and Federal Statutes and Regulations (45 CFR 156.08(d)(1) and 147.102);
 - —Developed in compliance with applicable Actuarial Standards of Practice;
 - -Reasonable in relation to the benefits provided and the population anticipated to be covered; and
 - -Neither excessive nor deficient.
- The index rate and only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) were used to generate plan level rates.
- The percent of total premium that represents essential health benefits included in Worksheet 2, Sections III and IV were calculated in accordance with actuarial standards of practice.
- Geographic rating factors reflect only differences in the costs of delivery of and do not include differences for population morbidity by geographic area.
- The AV Calculator was used to determine the AV Metal Values shown in Worksheet 2 of the Part I Unified Rate Review Template for all plans, unless an alternate methodology was required. If an alternate methodology was used to calculate the AV Metal Value for at least one plan offered, a copy of the actuarial certification required by 45 CFR Part 156, §156.135 will be included.

The 1.06 factor is the uniform adjustment stated in the 2019 Filing Guidance from the change to the individual mandate.

The change in demographics was calculated considering changes to age, geography, and tobacco use.

The change in the average age was measured by comparing the average age factor calculated in this filing, based on February 2018 enrollments, to the average age factor calculated in the prior filing, based on February 2017 enrollments.

	2018	2019	
	Filing	Filing	Change
Age Factor	1.657	1.672	1.009
Change from geography: No change	e		1.000
Change from tobacco use: No chan		1.000	
Total change			1.009

The benefits factor was slightly below 1 due to membership movement among plans.

No changes for Other were assumed for this filing.

The network factors used in Table 10 are based on the network differentials from the prior filing.

The network factor used for Keystone HMO was 1.100.

The network factor used for Proactive was 1.000.

The factors used in Table 10 recalibrate the values so that the differntials between the factors remains constant, and the composite factor equals 1.000.

Table 10 factors: HMO 1.089

Proactive 0.990

Unique Plan Design Supporting Documentation and Justification

ACTUARIAL MEMORANDUM

HIOS Issuer ID: 33871

HIOS Product IDs: 33871PA004, 33871PA012

Applicable HIOS Plan IDs (Standard Component): 33871PA0040002, 33871PA0120002, 33871PA0120004, 33871PA0040005, 33871PA0120005, 33871PA0040006, 33871PA0120006, 33871PA0120007, 33871PA0120008.

Purpose of document:

The purpose of this document is to provide CMS with a justification of the methods used in calculating the actuarial value for unique plan designs offered in the individual or small group market for the plan year beginning 1/1/2019. As prescribed by law, the AV calculation was based on the AV calculator to the full extent possible. The AV is meant to represent the average percent of costs paid by the insurer for a standard population, and may vary from actual member experience. The resulting AV was based on prescribed methodology and, therefore, may not reasonably reflect the actuary's estimate of the portion of allowed costs covered by the health insurance plan. The AV was determined based on the plan's benefits and coverage data, the standard population, and utilization and continuance tables published by HHS for purposes of the valuation of AV. This actuarial analysis is not appropriate for any other purposes.

Reasons the plan design is unique (benefits that are not compatible with the parameters of the AV calculator and the materiality of those benefits):

The cost sharing of inpatient hospital services for these plans is a combination of copays for facility claims and coinsurance for professional claims. Inpatient hospital services account for about 21% of allowed costs in the AV calculation.

The following plans have three in-network tiers: 33871PA0040005, 33871PA0120005, 33871PA0040006, 33871PA0120006, 33871PA0120007 and 33871PA0120008.

33871PA0040005 and 33871PA0120005 have expected utilization of 37% in the third tier. 33871PA0040006, 33871PA0120006, 33871PA0120007 and 33871PA0120008 have expected utilization of 41% in the third tier.

Acceptable alternate method used per 156.135(b)(2) or 156.135(b)(3):

Method 156.135(b)(2) was used for the inpatient hospital cost sharing.

Method 156.135(b)(3) was used to accommodate the three tier design.

Confirmation that only in-network cost sharing, including multitier networks, was considered:

I confirm that only in-network cost sharing was considered.

Description of the standardized plan population data used:

We used our commercial PPO and HMO data incurred between August 2014 and July 2015.

If the method described in 156.135(b)(2) was used, a description of how the benefits were modified to fit the parameters of the AV calculator:

Combination of Copays and Coinsurance for IP Hospital

The copays for inpatient hospital facility claims were combined with the coinsurance on professional claims to calculate equivalent copays for inpatient claims.

First we took the allowed PMPY inpatient costs and divided that by the utilization by admit PMPY to calculate the average cost per admit. We also took the utilization by day PMPY and divided that by the utilization by admit PMPY to calculate the average length of stay.

The average cost per admit was divided by the average length of stay to calculate the average cost per day. Based on our data, we assumed that 84% of the cost was from facility claims and the remaining 16% was from professional claims.

The professional coinsurance was multiplied by the professional portion of the daily inpatient cost to calculate equivalent daily copay for that piece. Because there is a 5-day maximum on our plans' inpatient copays, an effective copay factor was calculated by dividing the PMPY cost sharing from a \$100 per day inpatient copay with a 5-day maximum by the PMPY cost sharing from a \$100 per day inpatient copay without any maximum. The equivalent daily professional copay amount was then divided by this factor in order to determine the final professional copay reflecting a 5-day maximum.

The final professional copay was then added onto the facility copay in order to determine the equivalent overall IP hospital copay amount. The exhibit below details this calculation.

HIOS IDs IP Cost Sharing	33871PA0040002, 33871PA0120002	33871PA0120004	33871PA0040005, 33871PA0120005	33871PA0040005, 33871PA0120005	33871PA0040006 33871PA0040006-04 33871PA0120006 33871PA0120007 33871PA0120008	33871PA0040006, 33871PA0040006-04, 33871PA0120006, 33871PA0120007, 33871PA0120008

If the method described in 156.135(b)(3) was used, a description of the data and method used to develop the adjustments:

Using the AV calculator and the methods described above, we calculated the AV for each tier in each plan, as follows. Based on actual tier utilization experience incurred in 2015, we projected expected utilization by tier for the plans. The final AV for the plan was then calculated by taking the weighted average of the tier AVs using the utilization by tier. The following exhibits details this calculation.

Utilization	Tier 1	Tier 2	Tier 3	Total
33871PA0040005, 33871PA0120005	47%	16%	37%	100%
33871PA0040006, 33871PA0120006, 33871PA0040007, 33871PA0120008	50%	9%	41%	100%

	Actuarial Value			
HIOS ID	Tier 1	Tier 2	Tier 3	Average
33871PA0040005, 33871PA0120005	77.78%	75.62%	74.32%	76.16%
33871PA0040006, 33871PA0120006	74.77%	69.16%	68.47%	71.68%
33871PA0040006-04	76.52%	71.78%	71.12%	73.88%

33871PA0120007	73.35%	69.16%	68.47%	70.97%
33871PA0120008	74.82%	69.22%	68.56%	71.75%

Certification Language:

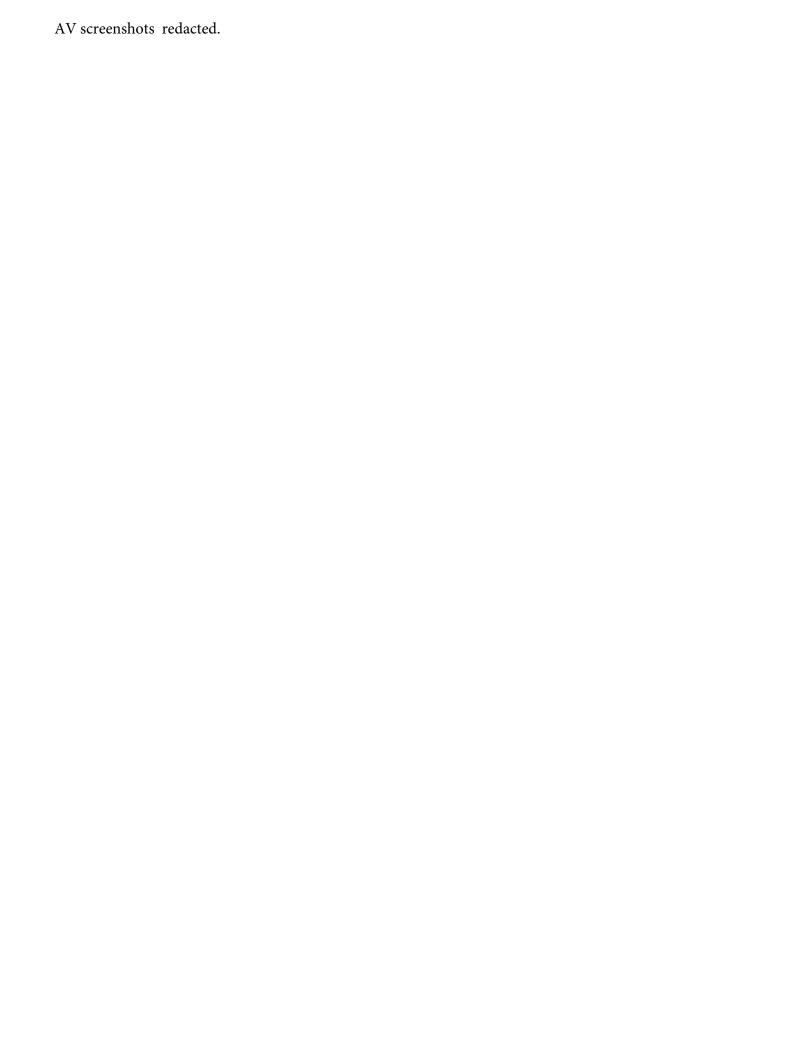

The development of the actuarial value is based on one of the acceptable alternative methods outlined in 156.135(b)(2) or 156.135(b)(3) for those benefits that deviate substantially from the parameters of the AV Calculator and have a material impact on the AV.

The analysis was

- (i) conducted by a member of the American Academy of Actuaries; and
- (ii) performed in accordance with generally accepted actuarial principles and methodologies.

I am an employee of the issuer, I meet the *Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States* promulgated by the American Academy of Actuaries, and I have the education and experience necessary to perform this work. All AVs herein were determined in accordance with the ASOPs established by the Actuarial Standards Board and comply with applicable laws and regulations; furthermore, all metal levels herein were appropriately assigned based on applicable law.

Unique Plan Design Supporting Documentation and Justification

ACTUARIAL MEMORANDUM

HIOS Issuer ID: 33871

HIOS Product IDs: 33871PA012

Applicable HIOS Plan IDs (Standard Component): 33871PA0120003

Purpose of document:

The purpose of this document is to provide CMS with a justification of the methods used in calculating the actuarial value for unique plan designs offered in the individual or small group market for the plan year beginning 1/1/2019. As prescribed by law, the AV calculation was based on the AV calculator to the full extent possible. The AV is meant to represent the average percent of costs paid by the insurer for a standard population, and may vary from actual member experience. The resulting AV was based on prescribed methodology and, therefore, may not reasonably reflect the actuary's estimate of the portion of allowed costs covered by the health insurance plan. The AV was determined based on the plan's benefits and coverage data, the standard population, and utilization and continuance tables published by HHS for purposes of the valuation of AV. This actuarial analysis is not appropriate for any other purposes.

Reasons the plan design is unique (benefits that are not compatible with the parameters of the AV calculator and the materiality of those benefits):

The cost sharing for outpatient facility fee varies by site of service. Services rendered at the office or a free standing facility have 70% coinsurance, and services rendered by a hospital have 50% coinsurance. Outpatient facility fee accounts for roughly 12% of allowed costs in the AV calculation.

Acceptable alternate method used per 156.135(b)(2) or 156.135(b)(3):

Method 156.135(b)(2) was used for the outpatient facility site of service cost sharing.

Confirmation that only in-network cost sharing, including multitier networks, was considered:

I confirm that only in-network cost sharing was considered.

Description of the standardized plan population data used:

For the freestanding and hospital utilization data for outpatient facility, we used our commercial PPO and HMO data incurred between August 2014 and July 2015.

If the method described in 156.135(b)(2) was used, a description of how the benefits were modified to fit the parameters of the AV calculator:

For the outpatient facility site of service cost sharing, our recent data indicated that 80% of outpatient facility claims came from the hospital setting.

The cost sharing entered into the AV calculator is a weighted average of the 50% coinsurance at the hospital and 70% coinsurance at an ambulatory surgery center. The final coinsurance entered was 54.00%.

If the method described in 156.135(b)(3) was used, a description of the data and method used to develop the adjustments:

Not applicable.

Certification Language:

The development of the actuarial value is based on one of the acceptable alternative methods outlined in 156.135(b)(2) or 156.135(b)(3) for those benefits that deviate substantially from the parameters of the AV Calculator and have a material impact on the AV.

The analysis was

- (i) conducted by a member of the American Academy of Actuaries; and
- (ii) performed in accordance with generally accepted actuarial principles and methodologies.

KHPE INDIVIDUAL

JUNE 14 RESPONSES

Below are responses to the questions from the June 14, 2018 objection letter. Included with this cover letter is a workbook that contains additional requested information. Changes made to documents in this rate filing are listed in a separate worksheet included with this letter.

1. In Wksh 2 of the URRT, the AV Pricing Values (i.e., row 16) should be equal to the total adjustment from the Market Adjusted Index Rate (MAIR) to the Plan Adjusted Index Rate (PAIR) for each plan (e.g. MAIR x AV Pricing Value = PAIR). However, this does not appear to be the case. Please explain why this is not the case or correct the issue to follow the Part III URRT Instructions Section 2.2.3.

We entered the AV Pricing Values from the Actuarial Memorandum Rate Exhibit. The attached worksheet shows a calculation by plan of the product of all of the factors used in the calculation of the plan-specific rates. Should PID prefer that those value be entered, we will revise them in the URRT.

2. We are unable to replicate the rates on the Rate Data template using the Plan Adjusted Index Rates (PAIRs) entered in the URRT Wksh II section IV. It appears the PAIRs entered in the URRT do not match the Pure Premium values in column AA on tab [III Plan Rates] when removing the aggregate calibration factor. Please explain why these values would be different. If this was done in error, please correct the rate filing documents to be consistent.

We found that our formula for Plan Adjusted Index Rates was referencing the Age Calibration Factor from the Actuarial Memo Rate Exhibit instead of the Aggregate Calibration Factor; the difference is the Tobacco Calibration Factor. After this correction is made, the Plan Adjusted Index Rates in Section IV are correct.

For example, for Plan 33871PA0040001, the values shown in the filed URRT was \$1,155.94, which is the 2019 Calibrated Plan Adjusted Index Rate (Column AA) multiplied by 1.672. Adjusting by the Aggregate Calibration Factor provides the correct values.

 Please provide the numerical development of the Exchange User Fee of \$14.50 applied to the Market Adjusted Index Rate shown in Table 5 of the file [2019_Indiv_KHPE_PAAMExhibits_052118.xlsm].

We projected that the same proportion of premium would come from On-Exchange enrollments that we used in our prior 2018 pricing, which was 74.3%. The Exchange user fee is 3.5% of Premium for on exchange plans. Therefore about 2.6% of overall premium would be for exchange use fees. This is about \$14.50 PMPM. (i.e. \$557.15 Required Premium in cell C63 on Table 6 x 0.026).

4. The following questions are related to the proposed annual trend rate equal to 12.8%: a) Please show a numerical development of the assumed annual trend rate being used to project the experience period claims to the projected 2019 coverage year. b) Please provide the trends based on historical allowed claims experience for each benefit category for years 2015, 2016, 2017, and 2018 (year to date). We realize 2018 trends will be partially based on estimated claim costs. c) Please also provide a breakout of the calendar year experience between the first half and second half of each year to demonstrate how much lower the experience observed in the first half of 2017 was than expected, as stated in the Actuarial Memorandum.

Please see below for information on the projected unit cost trends.

		PA Individual

- 5. The following questions are related to the Demographics factors (1.657 and 1.672) shown in the file [ACA KHPE Ind Supporting.xlsx]: a) Please show the quantitative development of the above-referenced factors, making sure to include the membership by age that is used in calculating them. b) Please specify what age curve is being used to determine these factors (e.g. 2019 federal default age curve, internal age curve)?
 - (a) The calculation of the 2019 demographic factor is shown in the attached worksheet. This was compared to the factor used in the 2018 rate filing to measure the change in the demographic factor used to calculate 2019 rates.
 - (b) We used the 2019 federal default age curve per the PID instructions.

Members Est. 2019	KHPE	Demo		est. 2018 membership	2018 Demo Factors
0-20	18,823	0.821	0-20	19,788	0.818
21-29	22,507	1.040	21-29	21,287	1.039

30-39	26,286	1.207	30-39	24,506	1.207
40-49	26,861	1.464	40-49	25,460	1.465
50-59	36,724	2.213	50-59	34,904	2.210
60-63	17,388	2.842	60-63	20,607	2.876
64+	5,950	3.000	64+	961	3.000
Total	154,539	1.672	Total	147,513	1.657

- 6. The following questions are in regards to the Single Risk Pool Adjustment factors entered in Table 5 of the PA Actuarial Memorandum Exhibits a) Please explain and provide the numerical development of the Change in Network Factor of 0.999. b) Please explain and provide the numerical development of the Change in Benefits factor of 0.994.
 - (a) Please see the calculation in the attached worksheet (Network Factor tab)
 - (b) Please see the calculation in the attached worksheet (Change in Benefits tab)
- 7. We have the following questions regarding the Benefit Richness (induced demand) column in Table 10: a) Please provide numerical support for the Benefit Richness (induced demand) factors shown in Table 10. b) Please confirm and demonstrate in your support that health status was not taken into account when developing these factors. c) Please explain why these values vary so significantly within a given metal level if health status is not taken into account; specifically for Silver plans where the factors range from 0.994 to 1.095 and Gold metal plans where they range from 1.100 to 1.183.
 - (a) The PID-required calculation is shown in the attached worksheet.
 - (b) Our induced demand factors do not take into account health status.
 - (c) We utilized this approach because we are trying to preserve the rate relationship we currently have in the market.
- 8. Please describe the methodology used to determine the provider network factors used in column N of Table 10. Please also provide the numerical development of the factors in column N of Table 10 and be sure to support (numerically) the underlying network factor values which are provided in Table 14 of the PA Actuarial Memorandum Exhibits.

The provider network factor is calculated based on the expected unit cost differences between the proactive and non-proactive networks. These differences are a combination of different contracting between the networks. (I.e. The same facilities contracted at different rates between the two networks) and facility mix. (I.e. Different facilities being utilized for the same services between the two networks.)

We expect the proactive network to be 10% less expensive than the Non-proactive network. We then normalized so that the weighted average of the factors equals 1.00.

This results in a factor of 0.990 for Proactive and 1.089 for Non-proactive. (I.e. 1.089/0.990 = 1.10 or a 10% difference).

Please explain why the CSR load of 1.28 is being applied to Plan 33871PA0120006 in Table 10
of the PA Actuarial Memorandum Exhibits even though column J specifies that the plan will
only be available off-Exchange.

Plan 33871PA0120006 is the off-exchange version of Plan 33871PA0040006 and is rated consistently with it. The benefits in these plans are identical with the exception of an elective abortion benefit contained in the off-exchange version.

10. Please provide the numerical development of the tobacco calibration factor of 1.013 shown in cell T6 of Table 10.

Please see the table below. The calculation uses the expected age distribution and expected % tobacco use by age, as well as our previously approved tobacco factors to determine the impact of tobacco rating.

	2018 Expected Age distribution	Expected % tobacco use	Approved Tobacco Factors
0-20	13%	5.0%	-
21-29	15%	5.0%	0.125
30-39	17%	5.0%	0.175
40-49	18%	6.0%	0.225
50-59	24%	6.0%	0.375
60-63	11%	6.0%	0.375
64+	2%	6.0%	0.375
Total			1.3%

11. Please provide the numerical development of the projected 2019 MLR that shows compliance with the 80% minimum MLR.

Projected Premium from Table 6 = \$557.15

Projected Paid Claims from Table 5 = \$413.12

Projected Risk Adjustment from Table 5 = (\$46.15)

QI = 0.80%; Taxes and fees = 0.52% (From table 6)

 $MLR = (413.12 + (557.15 \times 0.008)) / (557.15 - 46.15 - (557.15 \times 0.0052)) = 82.2\% > 80\%$

12. Please explain and provide the quantitative development of the projected risk adjustment payment PMPM equal to \$46.15.

Please see the calculation in the attached worksheet (Risk Adjustment tab).

13. It is stated in the cover letter that the overall rate increase using the state's estimate for the value of the individual mandate and CSRs non being funded is 9.9%, however if you used your internal estimates for these items, the overall rate increase would be 3.1%. Please provide your estimates for these items as well as the quantitative development of those estimates.

The 3.1% estimate was calculated by replacing the 6% morbidity factor with 7%, and the 1.28 CSR factor with 1.15. This value is our projection based on our 2016 CSR reimbursements; 2016 was the last year where we received reimbursement for the entire calendar year. Substituting those values in the Actuarial Memorandum Rate Exhibit produced an overall rate increase of 3.1%.

The following additional questions or comments are from PID.

14. Table 2 – Please correct the Estimated Cost Sharing formula as per our telephone discussion.

We corrected the Cost Sharing formula in Table 2 as requested. This did not impact any of the calculations later on in the Exhibit and therefore had no rate impact.

15. Rate Change Summary - Thank you for your email explaining the discrepancy. However, the medical costs increase should be the same as the annual trend in Table 3 and not taken from the URRT. Please correct it.

We updated the Rate Change Summary to show the medical costs increase equal to the annual trend.

- 16. Table 10: Please provide the workbook with support data and calculations for the following: a) Age calibration factor of 1.672 b) Tobacco calibration factor of 1.013 c) Pricing Actuarial Value in Column K d) Benefit Richness Factors in Column L please provide table to support as directed on page 16 of PID Rate Filing Guidance. e) Network factors in Column N.
 - (a) We based the age calibration factor on the age distribution shown in the workbook attached to this response. When we submitted the filing, we updated the membership in Tables 1 and 10 to be consistent with the updated data we provided the department for membership by metal tiers but did not recalculate the age calibration factor at that time.
 - (b) Please see our response to Item 10 above.
 - (c) The pricing actuarial values in Column K were taken from our proprietary internal pricing models.
 - (d) The table supporting Benefit Richness Factors in included in the attached workbook.
 - (e) Please see our response to Item 8 above.

- 17. Table 5: Please support the calculations of following factors: a) Change in Network of 0.999 b) Change in Benefits of 0.994 c) Projected Paid Exchange User Fees PMPM of \$14.50. (Please input formula in Cell C32 as per Page 12 of PID Filing Guidelines).
 - (a) Please see the calculation in the attached worksheet (Network Factor tab)
 - (b) Please see the calculation in the attached worksheet (Change in Benefits tab)
 - (c) Please see our response to Item 3 above.
- 18. Please confirm that you have tested to ensure that the rates in Table 11 of the Actuarial Memorandum Exhibits, PA Plan Design Summary and Rate Tables, Federal Rates Template and the binder are identical.

Confirmed that we made those checks prior to submitting the rate filing.

19. For the expanded Bronze plans, please demonstrate that the copay is less than or equal to 50% coinsurance for that category.

Our average allowed cost per visit for PCP is about \$120. Therefore \$50 PCP copay is less than 50% coinsurance. Specialist copay is set to 2x PCP copay.

20. In the 2019 Guidance published on the Department's website, the Department required that all issuers file uniform factors for the Individual Adjustment of 1.06 and the CSR Defunding Adjustment of 1.28. In addition, the Department indicated that as the rate review process moves forward and federal healthcare reform efforts are clarified, the Department would consider issuer specific requests. We can now advise that the aforementioned factors of 1.06 for the Individual Adjustment and 1.28 for CSR Defunding Adjustment constitute ceilings. If your company desires lower adjustments than those stated in the Department's 2019 Guidance, you may provide updated materials (PA Actuarial Memorandum and Exhibits, Part III Actuarial Memorandum, Part I URRT and corresponding rate tables – State and Federal) and justification for the lower Adjustment factor(s) with your first round response due June 21, 2018. The Department will not consider adjustment factors greater than those stated in the 2019 Guidance.

We have submitted revised exhibits with this response that use a factor of 1.15 for the CSR Defunding Adjustment. This value is our projection based on our 2016 CSR reimbursements; 2016 was the last year where we received reimbursement for the entire calendar year.

We did not revise the Adjustment for the Individual Mandate; it remains at 1.06.

Please note: we reserve the right to revise these proposed rates based on the final risk adjustment information.

COVER LETTER

KHPE INDIVIDUAL

JULY 13 RESPONSES

Based on the changes noted in the file: 'June 22 PA Revisions List.xlsx' an updated URRT should have been provided. However, the URRT
 '33871khpeurrtp1_ind_2019pid_062118_RV.xlsm' does not appear to include all of these changes. Please upload the June 22nd version of the URRT which we believe should include the changes outlined.

As discussed in our previous response, we would make the revision should PID prefer that we enter those values instead of the Pricing AV values shown in their exhibit. Nevertheless, we revised the URRT with this response as you requested.

- 2. Please provide the following information related to the proposed annual trend rate equal to 12.8%:
 - a. Please provide a breakout of the calendar year experience between the first half and second half of each year (i.e., for 2016, 2017, and 2018) to demonstrate how much lower the utilization experience observed in the first half of 2017 was than expected, as stated in the Actuarial Memorandum.

The experience is shown in Table 4 of the Actuarial Memorandum Rate Exhibit on an Incurred Basis, and on an Allowed Claim basis in the Tab "Allowed Claims History" in the "Table For Objection KHPE Ind RV" sent with the previous response.

b. Please show the historical utilization trends for years 2016, 2017, 2018, and projected 2019 which support the 9.0% projected utilization assumption shown in row 7 of tab [Unit Cost Trends] in the file 'Table For Objection KHPE Ind RV.xlsx'. Note: We realize 2018 trends will be partially based on estimated claim costs.

The chart below shows the utilization used in rating for 2016, 2017, and 2018.

2016	3.39%
2017	6.51%
2018	3.33%

c. Please explain and show numerical support for the large capitation trend (15.0%) for 2019.

The capitation trend reflects increases in our payments to the providers due to contract revisions.

3. In regards to your response to the first round question 5, demographic factors, you show a significant increase in projected 2019 membership for ages 64+ of 5,950 from 2018 membership of 961. Please explain why such a large increase in enrollment in this age bucket is being assumed and provide justification demonstrating that the assumption is appropriate.

For measurement of the change due to demography, we compare the result of the 2019 projection to the result of the 2018 projection. The member counts shown in the "Demo Summary" compare the projection used in the 2019 rate filing to the projection used in the 2018 filing. What was used in the 2018 filing was the basis for the factor used then. This year's projection is more consistent with the membership shown in Table 1 of the Actuarial Memorandum Rate Exhibit.

4. In regards to your response to the first round question 6b) provided in file 'Table For Objection KHPE Ind RV.xlsx', tab [Change in Benefits], the Benefit Factor values in column D do not match those entered in Table 10 (column L) for plans 33871PA0040005, 33871PA0040006, 33871PA0120001, 33871PA0120002, 33871PA0120003, 33871PA0120004, 33871PA0120005, 33871PA0120006, and 33871PA0120007. Please explain why these values would be difference and support numerically the benefit factors included in the response to 6b. If this was done in error, please correct the inconsistency and re-submit supporting calculations.

We don't see differences. Below is a table that shows the values from the "Change in Benefits" tab and the values in Table 10 Column L:

	Change in	
HIOS ID	benefits	Column L
33871PA0040005	0.994351	0.994351
33871PA0040006	1.559782	1.559782
33871PA0120001	1.182650	1.182650
33871PA0120002	1.095165	1.095165
33871PA0120003	0.895990	0.895990
33871PA0120004	1.099662	1.099662
33871PA0120005	0.994351	0.994351
33871PA0120006	0.943687	0.943687
33871PA0120007	0.994351	0.994351

5. In regards to your response to the first round question 7c) Benefit Richness factors, you state "We utilized this approach because we are trying to preserve the rate relationship we currently have in the market." Please explain the "approach" you are referring to.

Consistent with last year, our induced demand factors do not take into account health status. For 2019 we did not update the induced demand factors, rather we first solved for the induced demand factors that would generate the 2018 rates slope in 2019 before benefit changes.

We utilized this approach because we are trying to preserve the rate relationship we currently have in the market. The approach refers to the relationship of these factors across the plans. We maintained the same relationships used in the 2018 filing, and re-normalized them so that the composite factor would be 1.000.

6. In regards to your response to the first round question 8 you state "We expect the proactive network to be 10% less expensive than the Non-proactive network". Please explain how you determined the 10% assumption and provide any quantitative analysis that was performed in support of this expectation.

Consistent with last year, the provider network factor is calculated based on the expected unit cost differences between the proactive and non-proactive networks. These differences are a combination of different contracting between the networks. (I.e. The same facilities contracted at different rates between the two networks) and facility mix. (I.e. Different facilities being utilized for the same services between the two networks.)

We expect the proactive network to be 10% less expensive than the Non-proactive network. We then normalized so that the weighted average of the factors equals 1.00.

- 7. In regards to your response to the first round question 12:
 - a. Please explain in detail the methodology used in developing the "Risk Score PMPM" values provided in column F of the file 'Table For Objection KHPE Ind RV.xlsx', tab [Risk Adjustment].

This is the risk adjustment calculation.

$$T_{i} = \left[\frac{PLRS_{i} \cdot IDF_{i} \cdot GCF_{i}}{\sum_{i}(s_{i} \cdot PLRS_{i} \cdot IDF_{i} \cdot GCF_{i})} - \frac{AV_{i} \cdot ARF_{i} \cdot IDF_{i} \cdot GCF_{i}}{\sum_{i}(s_{i} \cdot AV_{i} \cdot ARF_{i} \cdot IDF_{i} \cdot GCF_{i})}\right] \overline{P}_{s}$$

Where

PS = State average premium * 0.86; PLRSt = plan i's plan liability risk score; AVi = plan i's metal level AV; ARFi = allowable rating factor; IDFi = plan i's induced demand factor; GCFi = plan i's geographic cost factor:

Metal	вммо	PLRS		ARF	GCF	IDF	AV	roduct Risk	Product w/o Risk	PMPM
Plat	759	3.287		1.545	1.091	1.150	0.900	4.126	1.745	547.74
Gold	18,206	2.246		1.775	1.091	1.080	0.800	2.648	1.674	86.38
Silver	128,691	1.550		1.689	1.091	1.030	0.700	1.743	1.329	(52.00)
Bronze	10,595	1.235		1.680	1.091	1.000	0.600	1.348	1.100	(74.62)
Total	158,251	1.617		1.698	1.091	1.034	0.706	1.832	1.355	
Est. StateWide	Average	1.76	\$ 710.49	1.76	1.00	1.034	0.703	1.822	1.277	
									Total	(34.72)

Note that this calculation is for the revised assumptions we have made with this filing.

b. Please confirm how the Membership assumptions in column C of the file 'Table For Objection KHPE Ind RV.xlsx', tab [Risk Adjustment] were developed.

The membership assumption was membership as of January 2018.

c. Please provide the estimated risk adjustment transfer amount PMPM for calendar year 2017. To the extent the estimate for 2017 is significantly different than the projection for 2019, please reconcile by describing the specific reasons for those differences and by providing justification for any underlying changes being assumed relative to 2017 (e.g., statewide average premium, PLRS) being assumed.

The anticipated risk adjustment payment for 2017 based on the July 9, 2018 Report for KHPE Consumer is a payable of \$66.6M. This is an approximate PMPM impact of (\$38.30).

It varies from the number we are projecting for 2019, (\$34.72), as for 2019, we adjusted statewide and our block of business for the impact of Individual Mandate going away. We also

adjusted our mix for changes developing in 2018. We also adjusted the statewide average premium used in the calculation.

PID's Issues:

8. As was communicated in my email of July 3, 2018 the Department has determined that an Individual Adjustment Factor of 1.06 and a CSR Defunding Adjustment Factor of 1.20 will be used in the 2019 rate development for the Individual Market. Issuers overwhelmingly recommended standardization of these factors. As such, issuers may not deviate from these factors. Updated materials (PA Actuarial Memorandum and Exhibits and the Plan Design Summary worksheets, including the State rate tables) reflecting these factors, Risk Adjustment updates (based on the June 30th release of the Federal Risk Adjustment Report) and other Department requested changes must be provided with your second-round response due July 13, 2018. Other than these three preceding changes, no other modifications will be accepted.

Included with this response is a revised set of exhibits which incorporates the CSR factor of 1.20, the Individual mandate factor of 1.05, and updated Risk Adjustment.

COVER LETTER

KHPE INDIVIDUAL

JULY 19 RESPONSES

- 1. In our opinion, adequate support has not yet been provided to justify the use of an annual utilization trend assumption equal to 9.0%. Please either provide adequate support for this assumption or revise the proposed trend rate to be more consistent with historically observed levels. The provision of any of the following would be considered acceptable in terms of providing support for this assumption:
 - a. A quantitative demonstration that actual recent historical (e.g., over the most recent two or three year period) utilization trend rates for the company have been equal to approximately 9.0%
 - b. References to applicable industry studies or analysis (including the location of the sources being referenced such that we may review them) that support the use of an annual utilization trend rate equal to 9.0%
 - c. Some other quantitative demonstration showing that it is reasonable to expect that utilization rates will increase across all service categories at a rate equal to 9.0% over the two year period of 2017 to 2019

We have elected to use option B of the three options provided. The attached exhibit demonstrates, using industry data which is cited in the link within the file, that the trend is reasonable given historic averages of 10 year trends. As can be seen from this data, periods of lower than average trends are usually followed by periods of higher than average trends due to the concept of mean reversion.

2. Please double-check your response to the second round question 4 and revise accordingly. In your response, it is indicated that the "values from the Change in Benefits tab and the values in Table 10 Column L" are equal for each plan. However, in the table which was provided in your response, plan ID 33871PA0040005 is shown to have a value equal to 0.994351 in Column L of Table 10. Per the file named "2019_KHPE_PAAMExhibits_071318 Revised.xlsm," the Benefit Richness value included in Column L of Table 10 for the specified plan is actually 1.100. Similar discrepancies exist

for the other plans referenced in second round question 4. Please address and provide a revised response to the second round question 4 as appropriate.

We rechecked the files and agree that the table we submitted in the earlier response had a linking problem which is resolved in the table we have attached called "Updated Benefit change table". We apologize for the confusion.

- 3. With respect to the proposed risk adjustment transfer assumption equal to (\$34.72) PMPM, it is noted in your response that this assumption is different from the actual anticipated 2017 payment equal to (\$38.30) PMPM due to adjustments which were applied statewide and "to our block of business" for the impact of the individual mandate going away, changes in the statewide average premium, and changes in the mix of enrollment developing in 2018. Please provide the following information related to these items:
 - a. Based on our review, as long as the adjustments which were applied both statewide and on a company specific basis to reflect the impact of the individual mandate going away were equal, we would expect the impact on the 2019 risk adjustment results to be minimal (relative to the 2017 results). Please confirm that the adjustments which were applied on a statewide and company specific basis to reflect the impact of the individual mandate going away were equal, and whether you agree that the impact on risk adjustment was minimal. If they were not equal, please provide each of the adjustments which were applied and support for their use. If you disagree that the impact should be minimal, please clarify why this understanding is incorrect.

We do not feel the individual mandate going away had the same impact on our market as the statewide average. The statewide average reflects the Pennsylvania Insurance Department guidance of a 1.06 factor increase while our company's factor reflects our projected impact.

An additional notable change to account for variance between 2017 payment and projected 2019 payment is the methodology change which began in 2018; and therefore, not captured in the 2017 results but is present in 2019.

b. In accounting for the changes in mix of enrollment developing in 2018, it appears that the company is assuming that the risk transfer components (e.g., the PLRS, ARF) for each metal level in 2019 will be equal to the values of those components for 2017 (excluding assumed changes in the statewide average premium and the impact of the individual mandate going away), but that the mix of enrollment by metal level will be different in 2019 than that which was observed for 2017. Please confirm whether this understanding is accurate. If it is not, please clarify.

The PLRS and ARF in the buildup are reflective of the factors as projected for 2019. They are not the same as 2017 nor are they intended to be.

As stated in (a), part of variance between 2017 payment and projected 2019 payment would be the methodology change which began in 2018.

c. The approach described in (b) appears to assume that the average risk level of the company's membership may be changing due to the change in the distribution of membership by metal level. If this is not correct, please clarify and demonstrate how the shift in membership by metal level is not reflecting a change in morbidity.

The metal membership mix used in buildup is from January 2018 and not an additional morbidity adjustment. While morbidity is rising due to impact at company level for individual mandate, that only impacts the factors.

As pointed out in (a), the change in results between 2017 and 2019 can be attributed to the new formula and methodology change.

d. Depending on the response to (c), the projected risk transfer amount appears to imply that the average risk level of the company's membership is being assumed to increase (i.e., because the projected 2019 payment is less than the anticipated payment for 2017). If the company agrees, please revise the proposed rates accordingly to either (1) modify the current "Change in Morbidity" assumption of 1.06 to better align with the increased average risk level being estimated for 2019 or (2) modify the risk transfer amount in 2019 to be equal to that

anticipated for 2017, adjusted only to reflect expected changes in the statewide average premium and the impact of the individual mandate going away.

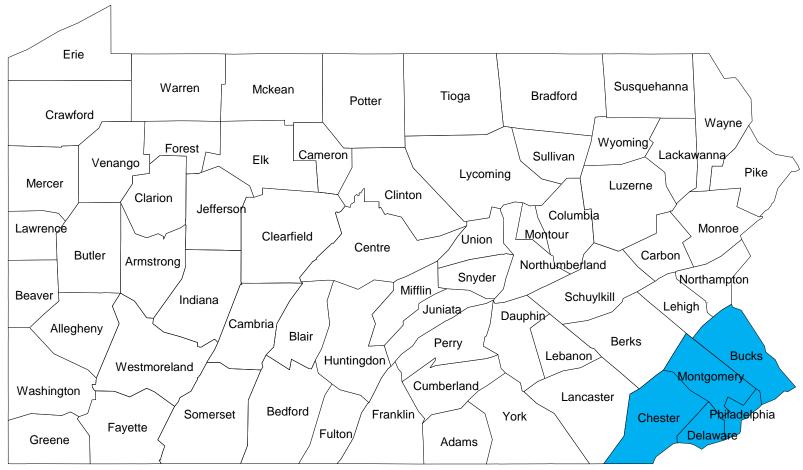

As mentioned in (a), the Pennsylvania Insurance Department mandated the 1.06 "Change in Morbidity" factor used in the Memorandum Exhibits. We projected this impact to be slightly different in our market. That is why the numbers differ. But we do believe we are using appropriately as change in company's morbidity to statewide average will drive risk transfer payments for 2019.

Additionally, the projected risk payment change is not necessarily reflective of change in risk. As stated in (a), the new formula and methodology is used beginning 2018 and therefore 2017 results are not indicative of 2019 projections.
