**Re: Capital Advantage Assurance Company
Small Group Rates
Filing No 19-45
TOI Code: H15G Group Health – Hospital/Surgical/Medical Expense
Sub-TOI Code: H15G.003 Small Group Only
Filing Type: Rate**

Dear ██████████:

By this filing Capital BlueCross, on behalf of its wholly owned subsidiary Capital Advantage Assurance Company, submits to the Department Small Group Rates effective January 1, 2020.

The following is a summary of the rate filing:

- Company Name: Capital Advantage Assurance Company (CAAC)
- NAIC: 14411
- Market: Small Group
- On/Off Exchange: Off Exchange
- Effective Date: 1/1/2020
- Average Rate Change: 13.3%
- Range of Requested Rate Change: 6.0% to 14.8/%
- Total additional annual revenue generated from the proposed rate change: \$43,749,920
- Product: PPO and EPO
- Rating Areas: 6,7,9
- Metal Levels: Platinum, Gold, Silver, Bronze
- Current Covered Lives and Policyholders: 44,280/26,526
- 2020 Number of Plans: 34
- 2019 Number of Plans and Change: 34/No Plan Changes
- Contract Form #: C20-CAAC-SPG
- Form Filing SERFF #: CABC-131908601
- Binder SERFF #: CABC-PA20-125092088
- HIOS Issuer ID: 45127
- HIOS Submission Tracking Number: 45127-1473191712519638019

Harrisburg, PA 17177 | capbluecross.com

In support of this filing, I have included an Actuarial Memorandum with supporting exhibits, URRT, Consumer Friendly Justification, Rates Table Template, Rate Change Request Summary, and PA Plan Design Summary and Rate Tables.

If you have any questions regarding this filing, please call me at [REDACTED] (or via email at [REDACTED]) or [REDACTED] at [REDACTED] ([REDACTED]). Thank you for your assistance in this matter.

Sincerely,

[REDACTED]

Attachment I

Rate Change Summary

Capital Advantage Assurance Company (CAAC) – Individual Plans

Rate request filing ID # CABC-131915676 - This document is prepared by the insurance company submitting the rate filing as a consumer tool to help explain the rate filing. It is not intended to describe or include all factors or information considered in the review process. For more information, see the filing at

<http://www.insurance.pa.gov/Consumers/ACARelatedFilings/>

Overview

Initial requested average rate change:	3.3% ¹
Revised requested average rate change:	1.6%
Range of requested rate change:	-1.0% to 4.4%
Effective date:	1/1/2020
People impacted:	45,626
Available in:	Rating Area 6, Rating Area 7 and Rating Area 9

Key information

Jan. 2018-Dec. 2018 financial experience

Premiums	\$ 440,341,537
Claims	\$ 248,270,191
Administrative expenses	\$ 20,113,710
Taxes & fees	\$ 63,072,775
Company made (after taxes)	\$108,884,862

How it plans to spend your premium

This is how the insurance company plans to spend the premium it collects in 2020:

Claims:	88.14%
Administrative:	6.52%
Taxes & fees:	3.34%
Profit:	2.0%

The company expects its annual medical costs to increase **7.88%**.

Explanation of requested rate change

Reimplementation of the Health Insurer Fee in 2020
Anticipated increase in facility and physician unit costs
Anticipated changes in prescription drug unit costs
Continuing change in utilization

¹ Note that insurers will have the opportunity to revise their rate change request in July, after they are scheduled to receive updated information about the impact of a federal program called risk adjustment. This document will be updated accordingly at that time.

**Re: Capital Advantage Assurance Company
Individual Rates
Filing No 19-41
TOI Code: H15I Individual Health – Hospital/Surgical/Medical Expense
Sub-TOI Code: H15I.001 - Hospital/Surgical/Medical Expense
Filing Type: Rate**

Dear ██████████:

By this filing Capital BlueCross, on behalf of its wholly owned subsidiary Capital Advantage Assurance Company, submits to the Department Individual Rates effective January 1, 2020.

The following is a summary of the rate filing:

- Company Name: Capital Advantage Assurance Company (CAAC)
- NAIC: 14411
- Market: Individual
- On/Off Exchange: On/Off Exchange
- Effective Date: 1/1/2020
- Average Rate Change Requested: 1.6%
- Range of Requested Rate Change: -1.0% to 4.4%
- Total additional annual revenue generated from the proposed rate change: \$7,025,224
- Product: PPO
- Rating Areas: 6,7,9
- Metal Levels: Gold, Silver, Bronze
- Current Covered Lives and Policyholders: 45,626/31,224
- 2020 Number of Plans: 4
- 2019 Number of Plans and Change: 4/No Plan Change
- Contract Form #: CAAC-Ind-PPO-C-v0120
- Form Filing SERFF #: CABC-131915210
- Binder SERFF #: CABC-PA20-125092047 & CABC-PA20-125092063
- HIOS Issuer ID: 45127
- HIOS Submission Tracking Number: 45127-1472049104468710402

Harrisburg, PA 17177 | capbluecross.com

Please note that per directions from the Insurance Department, the following factors have been applied to the rates for regulatory changes:

- Individual Adjustment: 0.06 added to the morbidity factor.
- Cost Sharing Reduction (CSR) Funding: 1.20 applied in the PA Rate Template, Part III, column P to the on-exchange silver plan.

In support of this filing, I have included an Actuarial Memorandum with supporting exhibits, URRRT, Consumer Friendly Justification, Rates Table Template, Rate Change Request Summary, and PA Plan Design Summary and Rate Tables.

If you have any questions regarding this filing, please call me at [REDACTED] (or via email at [REDACTED]) or [REDACTED] at [REDACTED] ([REDACTED]). Thank you for your assistance in this matter.

Sincerely,

[REDACTED]

Scope and Purpose

By this filing, Capital Advantage Assurance Company (CAAC), a subsidiary of Capital BlueCross (CBC), submits rates for products to be made available to individuals effective January 1, 2020. CAAC will offer individual products on and off the federally-facilitated exchange.

Rate History and Proposed Variations in Rate Changes

Market	Company	Effective Date	SERFF #	Annual Increase
Individual	CAAC	1/1/2016	CABC-130076761	1.60%
Individual	CAAC	1/1/2017	CABC-130539561	43.3%
Individual	CAAC	1/1/2018	CABC-131022042	49.2%
Individual	CAAC	1/1/2019	CABC-131454875	-20.8%

Average Rate Change

CAAC is proposing an aggregate annual 1.6% rate change. The rate change does vary by plan. The rate change is calculated in PA Rate Exhibits Part III, Table 10, cell AC15.

The key drivers of the rate change, and approximate impact, are as follows:

Reimplementation of the Health Insurer Fee: 3%
Future Cost and Utilization: 8%
Favorable Experience: -9%

Regulatory Considerations

Rates submitted by this filing assume changes to the current regulatory framework. As directed by the Insurance Department, the following factors have been applied to the rates for regulatory changes:

- Individual Mandate: 0.06 added to the morbidity factor.
- Cost Sharing Reduction (CSR) Funding: Factor of 1.20 applied in the PA Rate Exhibits, Part III, column P to the on-exchange silver plan.

Membership

Membership is shown in PA Rate Exhibits Part I, Table 1. The average age is 45.

Benefit Changes 2019-2020

A summary of proposed 2020 benefits is included in Exhibit A.

There are several benefit changes being implemented in 2020. All benefit changes comply with the uniform modification of coverage standards described in 45 CFR 147.106(e). Any plan with a benefit change that did not meet the uniform modification of coverage standard was terminated, and a new plan was created in its place. Benefit changes by plan are listed in Exhibit B, highlighted in yellow.

Experience Period Premium and Claims

Single Risk Pool: The data used to develop rates and shown in URRT and PA Rate Exhibits abides by 45 CFR part 156.80(d) single risk pool requirements. The single risk pool reflects all covered lives for every non-grandfathered, non-transitional product/plan combination for CAAC in the individual market.

Base Experience Period: The base experience period (BEP) includes completed fee-for-service paid and incurred claims for dates of service between January 1, 2018 and December 31, 2018.

Paid Through Date: Claims in the BEP are paid through March 31, 2019

Premiums (net of MLR Rebate) in BEP: Premiums are calculated on an earned basis in the BEP. MLR rebate adjustments applied are equal to zero.

Allowed and Incurred Claims in BEP:

- Allowed claims are developed by combining paid claims with member cost-sharing. Allowed claims meet the definition in the URR instructions. They do not include provider quality incentive payments.
- Incurred claims are net of HHS CSR payments.
- CBC only covers Essential Health benefits (EHBs).
- CAAC does not include capitated services.
- Allowed and Incurred claims are net of pharmacy rebates. BEP rebates are completed based on actual utilization of rebate-eligible drugs and rebate amounts.

Estimated Incurred but Not Paid Claims: Paid claims by date of service come directly from CBC's data warehouse. The method for calculating incurred claims in the BEP is as follows:

1. Historical fee-for-service claims are viewed by date of service and date of payment in a claims triangle.
2. The claims triangle payments are then accumulated by date of service to develop factors that represent the rate of accumulation or rate of "completion".
3. Historical rates of completion by duration are used to derive projected rates of completion. Some of the methods used to develop projected completion factors are averages (e.g. harmonic averages, time weighted averages, geometric averages) and regression methods.

Numerous items are considered when viewing these averages or regression statistics, such as the impact of high claims on perceived completion patterns.

4. For durations that exhibit a projected completion factor greater than the Valuation Actuary's chosen threshold (e.g. 80% complete), cumulative paid and incurred claims are divided by the projected completion factor to arrive at ultimate incurred claims. For durations that are less than the chosen threshold, a projection methodology is used. Similar to completion factor development, projection methodologies are worthy of a lengthy discussion. In general, an ultimate incurred claims PMPM is derived by projecting a recent 12-month period to the current month(s) and seasonally adjusting.
5. With all months having both a cumulative paid amount and an estimated ultimate incurred amount, the completion factors used in pricing are calculated by taking the quotient of the two. Allowed completion and incurred completion are assumed to be identical.
6. Both allowed and paid claims in the BEP are completed by applying completion factors by incurred month developed in Step 6.

$$BEP\ Incurred\ Claims = \sum \frac{BEP\ Paid\ Claims\ by\ Incurred\ Month}{Completion\ by\ Incurred\ Month}$$

$$BEP\ Allowed\ Claims = \sum \frac{BEP\ Paid\ Claims + BEP\ Member\ Cost\ Share\ by\ Incurred\ Month}{Completion\ by\ Incurred\ Month}$$

Risk Adjustment in BEP: Risk adjustment amounts in the BEP are equal to final risk adjustment transfer amounts released on June 28, 2019.

Loss Ratio in BEP: Loss ratio is 56.38%

Credibility of Data

CAAC individual data was used to develop rates. No credibility manual is used.

Trend Identification

Trend: 7.9%

Trend levels reflect CBC's best estimate of changes in utilization, provider reimbursement contracts, the network of facilities and providers, disease management initiatives and the impact of utilization management.

The following is a description of considerations used to determine trend.

1. Base Cost/ Change in hospital and physician contracting: The contracted increase in reimbursements to hospitals and physicians is the basis of cost trends. CBC uses the following to project future costs:
 - a. Vendor Physician Cost Model and Internal Hospital Contracting Model

- i. The medical cost models use best estimates of Capital BlueCross (CBC)'s future contracting increases with physicians and hospitals. The models use cost estimates based on varying contract effective dates by physician and hospital. All facilities and providers are considered in this modeling effort (i.e. acute and non-acute, network and non-network, inpatient and outpatient, in- area and out-of-area). From there, a monthly anticipated cost (assuming static utilization) summary is produced which can be used in projecting future claims costs. Cost trends are determined at the CBC book of business level for all commercial business.
 - b. Internal Prescription Drug Trend Model
 - i. Price Inflation
 - ii. Contract Pricing
 - iii. Member Cost-Sharing
 - iv. Units per Script
 - v. Brand/Generic Mix
 - vi. Therapeutic Mix
 - vii. Cost per Script
 - viii. Pipeline (new drugs)
- 2. Utilization Considerations:
 - a. Intensity of medical services rendered
 - b. Changes in place of service (e.g. continued migration of inpatient stays to outpatient setting)
 - c. Further migration from brand prescription drugs to generic prescription drugs
 - d. Favorable impacts of value based benefits designs
 - e. Medical utilization estimates reviewed by CBC's Chief Medical Officer
- 3. Leveraging: The trend model is based on allowed cost increases. Paid claims trend at a higher rate than allowed due to leveraging. Leveraging is the impact of static cost-share, such as deductibles and copays, to the paid trend.
- 4. Intensity: Measure of cost increase due to change in treatment sophistication. An example is migration from x-rays to MRIs at significantly higher cost.
- 5. Underwriting Cycle: The underwriting cycle is defined as the tendency to swing between profitable and unprofitable periods over time. The underwriting cycle is exacerbated partly by pricing performed with incomplete information as to the level of current experience trends. A reaction delay occurs, as carriers tend to rely on measurements of past experience in developing current pricing assumptions. As a result, carriers are often increasing their pricing trends when actual experience trends have begun to decline, and decreasing their pricing trends actual trends are increasing. CBC strives to mitigate the underwriting cycle by keeping trends consistent through times of increasing and decreasing claim cost and utilization.

Historical Experience: Historical experience was not used to the develop trend.

Benefit Categories: Claims in the benefit categories displayed in URRT come directly from CBC’s data warehouse. These same categories are used to develop category-level trend. See Exhibit C for a description of benefits by benefit category.

See Exhibit E for CAAC’s pricing trend, as well as cost and utilization components of the pricing trend.

Rate Development & Change

Projection Factors

Changes in Morbidity: Found in URRT Worksheet 1, “Morbidity Adjustment”, and PA Rate Exhibits, Table 5. The changes to morbidity is equal to the Department’s Individual Adjustment factor discussed above.

Changes in Benefits: Benefit changes are not applied to allowed claims as allowed should stay consistent from 2018 to 2020. Benefit changes are applied in the development of future incurred claims, due to changes in member cost-share. This calculation is shown in Exhibit D, and applied in Exhibit G. The manual cost PMPMs are developed from CBC’s internal benefit relativity model, discussed in the Plan Adjusted Index Rate section below. The benefit change is equal to member-month weighted average projected manual PMPM divided by member-month weighted average manual PMPM in the BEP. This process is further discussed in the Paid-to-Allowed section below.

Changes in Demographics: CAAC does not expect changes in demographics in its individual population.

Changes in Network: No network adjustment is applied.

Other Adjustments: No other adjustment is applied.

Benefits, Demographics, Network and Other adjustments are found in URRT Worksheet 1 and PA Rate Exhibits Table 5.

Index Rate

The experience period index rate is CAAC’s allowed claims PMPM, set in accordance with the single risk pool provision. All CAAC covered benefits are categorized as Essential Health Benefits (EHBs), therefore no adjustment was made to the experience period index.

Projected Allowed Claims: The CAAC experience period allowed claims, benefit-adjusted, trended to the projection period (See Projection Factors section above), and credibility adjusted, is the *Projected Allowed Claims at Current Benefits*. This number is reflected in Worksheet 1 of URRT (“Projected Allowed Experience Claims PMPM (w/ applied credibility if applicable)”).

To calculate the projected index rate:

1. Start with *Projected Allowed Claims at Current Benefits*
2. The *Projected Allowed Claims at Current Benefits* reflect EHBs 100 percent, so no adjustment needs to be made to add EHBs and remove non-EHB claim cost. This is the index rate for individuals renewing January – December.

See Exhibit J for the Index Rate.

Paid to Allowed Ratio

CAAC used the prescribed URRT allowed claim rate development methodology in conjunction with a paid and incurred rate development methodology to determine final premium rates. URRT projects allowed claims, and uses a paid-to-allowed ratio in order to adjust allowed claims to paid levels. This value is then used to develop premiums. In order to determine the paid-to-allowed ratio, CAAC projected paid and incurred claims, adjusted for benefits, to the experience period.

Projected Paid and Incurred Claims are calculated as follows:

1. Gather claims experience as described in the Data section above.
 - a. Base Experience Period (BEP) Paid Claims, Capitation, and Rx Rebates
 - b. BEP Member Months
2. Develop BEP *Paid and Incurred Claims*:

$$BEP \text{ Paid and Incurred Claims} = \frac{BEP \text{ Paid Claims}}{Completion \text{ Factor}}$$

The development of completion factors is described in Experience Period Premium and Claims above.

3. Develop the *BEP Paid and Incurred Claim PMPM*:

$$BEP \text{ Paid and Incurred Claim PMPM} = \frac{BEP \text{ Paid and Incurred Claims}}{BEP \text{ Member Months}}$$

4. Develop *Trended Claim PMPM*: Using the aggregate trend described in the Projection Factors section above, trend the BEP Paid and Incurred Claim PMPM from the midpoint of the experience period to the midpoint of the rating period.

Trended Claim PMPM

$$= [BEP \text{ Paid and Incurred Claim PMPM}] \times (1 + [Trend\%])^{Trend \text{ Months}/12}$$

5. Develop *Projected Paid and Incurred Claim PMPM*:

$$\begin{aligned}
 &\textit{Projected Paid and Incurred Claims PMPM} \\
 &= [\textit{Trended Claim PMPM}] \times [\textit{Benefit Adjustment}] \\
 &\times [\textit{Morbidity Adjustment}] \times [\textit{Other Adjustment}]
 \end{aligned}$$

The *Benefit Adjustment*, *Morbidity Adjustment*, and *Other Adjustment* are discussed in the Projections Factors section above.

6. Develop *Projected Claims PMPM by Benefit* as follows:

- a. CAAC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a \$0 office visit copayment and a \$25 ER copayment. Given a particular benefit design (for example, \$20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on cumulative probability distributions (CPDs), where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.
- b. This actuarial cost model derives a Manual Cost for each benefit design in the experience period, as well as plans being offered in the projection period. The average Manual Cost of the experience is compared to the Manual Cost of the base plan. The projected experience period data is then adjusted to the base plan:

$$\textit{Benefit Level Adjustment} = \frac{\textit{Average Manual Cost in Projection Period}}{\textit{Manual Cost of Base Plan}}$$

- c. The *Projected Paid and Incurred Claim PMPM* (Step 5) is then adjusted to the Base Plan as follows:

$$\begin{aligned}
 &\textit{Base Plan Paid and Incurred Claims PMPM} \\
 &= \frac{\textit{Benefit Adjusted Paid and Incurred Claims PMPM}}{\textit{Benefit Level Adjustment}}
 \end{aligned}$$

- d. Each additional benefit design has its own unique Manual Cost, which can then be compared to the Base Plan to develop a Benefit Relativity:

$$\textit{Benefit Relativity A} = \frac{\textit{Manual Cost of Benefit A}}{\textit{Manual Cost of Base Plan}}$$

- e. The Benefit Relativity developed in d. above is then used as a gauge to develop a final *Pricing Relativity*. This pricing relativity is developed using actuarial judgment including the following considerations:
 - i. Final premium relativities must make sense based on benefits. For example, the annual cost difference between a PPO 2000 and PPO 1000 must be less than \$1000.
 - ii. Adjustments for plan designs that fall outside of the actuarial cost model.
- a. So the *Projected Claims PMPM by Benefit* is:

$$\begin{aligned} \text{Projected Claims PMPM Benefit A} \\ = \text{Projected Claims PMPM Base Plan} \\ \times \text{Pricing Relativity A} \end{aligned}$$

- b. And to arrive at the *Total Projected Claims PMPM*, CAAC assumes a distribution of members across the benefit plans being offered in 2019. The *Total Projected Claims PMPM* :

$$\begin{aligned} = \text{Projected Claims PMPM Benefit A} \times \text{Expected Member Dist of Benefit A} \\ + \text{Projected Claims PMPM Benefit B} \\ \times \text{Expected Member Dis of Benefit B} + \dots \end{aligned}$$

7. The Paid-To-Allowed Ratio is then:

$$\text{Paid to Allowed Ratio} = \frac{\text{Total Projected Claims PMPM}}{\text{Projected Allowed Claims at Current Benefits}}$$

See Exhibit G for the development of the *Paid-to-Allowed Ratio*. And see Exhibit L for the plan-level projected incurred amount development.

Risk Adjustment

Projected Risk Adjustments PMPM:

Relevant to 2020 pricing is the impact of Commercial Risk Adjustment (CRA) payment transfers that are expected to be earned in 2020. The following items are those that we deem important in generating a CRA payment transfer adjustment:

1. Risk profile of the those enrolled in CRA eligible plans for the market or state (i.e. competitors) relative to risk profile of CRA eligible membership enrolled in our plans
2. Statewide average premiums
3. Current market penetration of this company and competitors in the market and in the state
4. 2017-2018 risk adjustment results

5. Market improvement in coding risk: CBC's ACA book of business has had a churn rate that makes a multi-year perspective of member diagnosis and risk very challenging. Because closing gaps in care and coding, and a myriad of other risk adjustment functions require more than a single year of data to facilitate an accurate depiction of risk, it is believed that CBC is disadvantaged in the market. This will drive CBC's relative risk to the market down over time.

Market Adjusted Index Rate

The Market Adjusted Index Rate is calculated as the Index Rate adjusted for all allowable market-wide modifiers defined in the market rating rules, 45 CFR Part 156.80(d)(1). So,

$$\begin{aligned} & [\textit{Market Adjusted Index Rate}] \\ &= ([\textit{Index Rate}] \times [\textit{Paid to Allowed Ratio}] \\ &\quad - [\textit{Net Projected ACA Reinsurance Recoveries}] \\ &\quad - [\textit{Net Projected Risk Adjustments PMPM}] + [\textit{Exchange Fees PMPM}]) \\ &\quad \div [\textit{Paid to Allowed Ratio}] \end{aligned}$$

See Exhibit K for the development of the Market Adjusted Index Rate.

Retention Items

Administrative Expense Load:

1. Risk Adjustment User Fee: To fund the HHS-risk adjustment program, issuers will remit to HHS a fee of \$0.18 PMPM. The Risk Adjustment Fee PMPM is included in URRT Worksheet 1, URRT Worksheet 2, "Administrative Expense", and PA Rate Exhibits Table 6.
2. Administrative Expense: Calculated using an allocation method from CBC's Finance department, and trended to the rating period. Costs are allocated according to results reported through a company-wide questionnaire. On an annual basis, each cost center within the company completes a questionnaire listing the distribution of costs (in percentage terms) by product as well as by market segment. For example, the questionnaire will ask what percentage of time is spent on PPO versus HMO versus Drug versus Medicare. And separately will ask what percentage of time is spent on large group, small group, individual, and government programs. Using those distributions, all costs needed to perform the business are allocated to the proper market segments and lines of business. The administrative expense applied in the rate development is the total expense allocated to CBC individual products. Administrative expenses are included in URRT Worksheet 2, "Administrative Expense", and PA Rate Exhibits Table 6. Expense as a percentage of premium vary by plan because a fixed dollar admin PMPM is applied to each plan.
3. Broker Expense: Calculated based on CBC's explicit per contract broker fee. Broker Expense is included in URRT Worksheet 2, "Administrative Expense", and PA Rate Exhibits Table 6. CBC pays commissions for new business and renewal enrollment received during open enrollment, both on and off exchange, and in all geographic

areas. Commission is less on catastrophic plans due to the lower premium. CBC does not pay commission during Special Enrollment Periods (SEP). The 2020 broker commission schedule is yet to be finalized. Attached please find the 1/1/2019 copy of the broker agreement – redacted version. Files are as follows:

- a. Redacted Agent Agreement: “Ind_19-41_Initial_CAAC_PPO_WBEBrokerIndRedacted_Supporting_20190521.pdf”
 - b. Redacted Preferred Producer Master Agreement: “Ind_19-41_Initial_CAAC_PPO_PPMABrokerIndRedacted_Supporting_20190521.pdf”
4. Value-Based Benefits (VBB): Standard with each plan, Capital BlueCross includes wellness incentives to maximize the likelihood that consumers make positive behavioral changes, which lead to better health, and curbed health care costs for employers and employees alike. The incentive is as follows:
 - a. Complete Health Risk Assessment questionnaire and receive a gift card.
 - b. Participate in an online coaching program and receive a gift card reward.
 - c. The wellness program is administered through a vendor and costs are based on vendor fees, anticipated participation, and reward card amounts.
 - d. Fees are included in overall administrative expense fee discussed above.
 - e. Included in URRT Worksheet 2 “Administrative Expense”, and PA Rate Exhibits Table 6.
5. Identity Theft Coverage: Identity protection offering will include the following components:
 - a. Credit monitoring – Monitors activity that may affect credit
 - b. Fraud detection – Identifies potentially fraudulent use of identity or credit
 - c. Fraud resolution support – Assists members in addressing issues that arise in relation to credit monitoring and fraud detection
 - d. Included in URRT Worksheet 1, “Administrative Load”, and PA Rate Exhibits Table 6.
6. Additional Quality Improvement: The Final Notice of Benefit and Payment Parameters (NBPP) for 2020 finalized the rule to allow issuers to apply a standard 0.8% of premium for quality improvement (QI) measures in the MLR calculation. Additional QI amounts applied in rating equal 0.4%. Included in URRT Worksheet 2, “Administrative Expense”, and PA Rate Exhibits Table 6.

Profit (or Contribution to Surplus) & Risk Margin:

7. Contingency: Contingency is included in URRT Worksheet 1, “Profit and Risk”, and PA Rate Exhibits Table 6.

Taxes and Fees:

1. Health Insurer Fee (HIF) – Section 9010 of PPACA and Section 1406 of the Reconciliation Act (which modified PPACA) refer to HIF. The fee is a fixed-dollar amount distributed across health insurance providers: \$8 billion in 2014, \$11.3 billion in 2015 and 2016, \$13.9 billion in 2017, \$14.3 billion in 2018, and the HIF increases by the rate of premium growth for 2019 and subsequent years. There was a moratorium on the

fee for 2017 and there is a suspension on the fee for 2019. HIF is included in URRT Worksheet 2, “Taxes and Fees”, and PA Rate Exhibits, Table 6.

2. Exchange Fee – All issuers participating in a federally-facilitated exchange will remit 3% of premium to HHS. The exchange user fee is applied as an adjustment to the Index Rate at the market level. The calculation and amount is found in Exhibit K. The amount is also found in PA Rate Exhibits, Table 5.
3. Federal Income Tax: Federal Income Tax will be collected on the 2% contingency built into the premium. The projected Federal Income Tax is included in URRT Worksheet 2, “Taxes and Fees”, and PA Rate Exhibits, Table 6.

See Exhibit H for all retention values.

Plan Rate Development

The Plan Adjusted Index Rates are included in Worksheet 2, Section IV of URRT.

The following adjustments were used to derive the Plan Adjusted Index Rate:

1. Actuarial Value and Cost Sharing adjustment: The Actuarial Value and Cost Sharing Adjustment is determined using CAAC’s actuarial cost model. CAAC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a \$0 office visit copayment and a \$25 ER copayment. Given a particular benefit design (for example, \$20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a claim PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on CPDs, where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.
2. Induced Demand: Please see Table 8
3. Provider Network: The Provider network is the same across all PPO plans.
4. Adjustment for benefits in addition to EHBs: No benefits other than EHBs are included in the plans, so no adjustment is necessary.
5. Catastrophic Plans: Applied to catastrophic plans to reflect lower morbidity.
6. Adjustment for distribution and administrative costs: Described in Retention section above.
7. Tobacco Adjustment: Calculated as the average tobacco factor applied across the risk pool.

The development of the Plan Adjusted Index rate is found in Exhibit L, and summarized in Exhibit M.

Plan Premium Development for 21-Year-Old Non-Tobacco User

Age Curve Calibration: The average age factor is calculated by taking the member-weighted average of current individual enrollment by age in CAAC. Age factors are applied in accordance

with CMS's Standard Age Curve. The age calibration factor is adjusted for contracts with greater than three children under the age of 21. Please see file Ind_19-41_Initial_CAAC_PPO_List-Billed_Supporting_20190521 for the calculation.

Geographic Factor Calibration: The average geographic rating factor is calculated by taking the CAAC member-weighted average by region.

Geographic Factors: CBC performed regional analysis to quantify the cost difference between the three regions in our service area. The analysis gathered incurred claims net Rx rebates, projected risk adjustment, and premium for a 12-month period by region. The loss ratio of each region is then compared to the average loss ratio for the book of business. In theory, the change in regional rating factor is:

$$[Change\ in\ Regional\ Rating\ Factor\ Region\ A] = [Region\ A\ LR] \div [BOB\ LR]$$

But our preferred approach is to gradually change factors, so not to shock the market, while moving rates in the appropriate direction. In order to do this, the following approach is being proposed:

$$[Change\ in\ Regional\ Rating\ Factor\ Region\ A] = [Region\ A\ LR] \div [Target\ LR]$$

Where Target LR is in between Region A LR and BOB LR. With this gradual approach, annual rate change by region is shown on Exhibit Q, column G.

Tobacco Factor Calibration: Average tobacco factor is calculated using current month member by smoking status data.

The calibration is:

$$[Calibrated\ Plan\ Adjusted\ Index\ Rate] = [Plan\ Adjusted\ Index\ Rate] \div ([Age\ Curve\ Calibration] \times [Geographic\ Factor\ Calibration] \times [Tobacco\ Factor])$$

Calibrated Plan Adjusted Index Rates are found on PA Rate Exhibits Table 10.
The calibration factors and development are found on Exhibit N.

Consumer Adjusted Premium Rate Development

The Consumer Adjusted Premium Rate is developed as follows:

1. Member-Level Consumer Adjusted Premium Rate:

$$\begin{aligned} [Member - Level\ Consumer\ Adjusted\ Premium\ Rate] \\ = [Calibrated\ Plan\ Adjusted\ Index\ Rate] \times [Age\ Factor] \\ \times [Geographic\ Factor] \times [Tobacco\ Factor] \end{aligned}$$

2. $[Family\ Consumer\ Adjusted\ Premium\ Rate] = \sum [Member - Level\ Consumer\ Adjusted\ Premium\ Rate]$

With no more than three child dependents under age 21 taken into account

All consumer-level adjustments are applied uniformly to all plans in the Single Risk Pool. These adjustments do not vary by plan. Age and Geographic factors are displayed in Exhibits O.

Base Rates, i.e. Calibrated Plan Adjusted Index Rates, are found on Exhibit P.

AV Metal Values

The AV Metal Values included in URRT Worksheet 2 and PA Rate Exhibits, Table 10 were based on the federally issued AV Calculator.

See AV Screenshots included with the submission.

AV Pricing Values

All AV Pricing values were developed using CAAC's actuarial cost model and actuarial judgment as described in section Paid to Allowed above. Differences in health status are not included.

Projected Loss Ratio

See Exhibit I for the projected loss ratio calculation. The projected loss ratio is calculated using the federally prescribed MLR methodology.

Membership Projection

The membership projections found in Worksheet 2 of URRT were developed by assuming moderate growth and similar distribution to current.

Attachments and Examples

The following is a list of Exhibits and Data to support this filing:

Actuarial Statement

I, [REDACTED], ASA, MAAA, am of the opinion that this filing is in compliance with the applicable Federal and State Laws and Regulations concerning the Patient Protection and Affordable Care Act and the Health Care and Education Reconciliation Act of 2010.

I, [REDACTED], ASA, MAAA, do hereby certify that:

1. This filing has been prepared in accordance with the following:
 - a. Actuarial Standard of Practice No. 5, “Health and Disability Claims”
 - b. Actuarial Standard of Practice No. 8, “Regulatory Filings for Rates and Financial Projections for Health Plans”
 - c. Actuarial Standard of Practice No. 12, “Risk Classification”
 - d. Actuarial Standard of Practice No. 23, “Data Quality”
 - e. Actuarial Standard of Practice No. 25, “Credibility Procedures Applicable to Accident and Health, Group Term Life, and Property/Casualty Coverage”
 - f. Actuarial Standard of Practice No. 26, “Compliance with Statutory and Regulatory Requirements for the Actuarial Certification of Small Employer Health Benefit Plans”
 - g. Actuarial Standard of Practice No. 41, “Actuarial Communications”.
2. The index rate is:
 - a. Projected in compliance with all applicable state and federal statutes and regulations (45 CFR 156.80(d) (1)).
 - b. Developed in compliance with the applicable Actuarial Standards of Practice.
 - c. Reasonable in relation to the benefits provided and the population anticipated to be covered.
 - d. Neither excessive nor deficient.
 - e. Adjusted by only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) to generate plan level rates.

3. The percent of total premium that represents essential health benefits were calculated in accordance with actuarial standards of practice.
4. The AV Calculator was used to determine the AV Metal Values shown in Worksheet 2 of the Part I Unified Rate Review Template for all plans, and in accordance with CFR 156.135(b)(2) as necessary. For any plan requiring an alternative method, the development of the actuarial value is based on one of the acceptable alternative methods outlined in 156.135(b)(2) or 156.135(b)(3) for benefits that deviate substantially from the parameters of the AVC and have a material impact on the actuarial value.
 - a. The analysis was
 - i. conducted by a member of the American Academy of Actuaries, and
 - ii. performed in accordance with generally accepted actuarial principles and methods.
5. Geographic area rating factors reflect only differences in the costs of delivery and not differences due to population morbidity.
6. All factor, benefit and other changes from the prior approved filing have been disclosed in the actuarial memorandum.
7. New plans cannot be considered modifications of existing plans under the uniform modification standards in 45 CFR 147.106.
8. The information presented in the PA Actuarial Memorandum and PA Actuarial Memorandum Rate Exhibits is consistent with the information presented in the Rate Filing Justification.

Scope and Purpose

By this filing, Capital Advantage Assurance Company (CAAC), a subsidiary of Capital BlueCross (CBC), submits rates for products to be made available to individuals effective January 1, 2020. CAAC will offer individual products on and off the federally-facilitated exchange.

Rate History and Proposed Variations in Rate Changes

Market	Company	Effective Date	SERFF #	Annual Increase
Individual	CAAC	1/1/2016	CABC-130076761	1.60%
Individual	CAAC	1/1/2017	CABC-130539561	43.3%
Individual	CAAC	1/1/2018	CABC-131022042	49.2%
Individual	CAAC	1/1/2019	CABC-131454875	-20.8%

Average Rate Change

CAAC is proposing an aggregate annual 1.6% rate change. The rate change does vary by plan. The rate change is calculated in PA Rate Exhibits Part III, Table 10, cell AC15.

The key drivers of the rate change, and approximate impact, are as follows:

Reimplementation of the Health Insurer Fee: 3%
Future Cost and Utilization: 8%
Favorable Experience: -9%

Regulatory Considerations

Rates submitted by this filing assume changes to the current regulatory framework. As directed by the Insurance Department, the following factors have been applied to the rates for regulatory changes:

- Individual Mandate: 0.06 added to the morbidity factor.
- Cost Sharing Reduction (CSR) Funding: Factor of 1.20 applied in the PA Rate Exhibits, Part III, column P to the on-exchange silver plan.

Membership

Membership is shown in PA Rate Exhibits Part I, Table 1. The average age is 45.

Benefit Changes 2019-2020

A summary of proposed 2020 benefits is included in Exhibit A.

There are several benefit changes being implemented in 2020. All benefit changes comply with the uniform modification of coverage standards described in 45 CFR 147.106(e). Any plan with a benefit change that did not meet the uniform modification of coverage standard was terminated, and a new plan was created in its place. Benefit changes by plan are listed in Exhibit B, highlighted in yellow.

Experience Period Premium and Claims

Single Risk Pool: The data used to develop rates and shown in URRT and PA Rate Exhibits abides by 45 CFR part 156.80(d) single risk pool requirements. The single risk pool reflects all covered lives for every non-grandfathered, non-transitional product/plan combination for CAAC in the individual market.

Base Experience Period: The base experience period (BEP) includes completed fee-for-service paid and incurred claims for dates of service between January 1, 2018 and December 31, 2018.

Paid Through Date: Claims in the BEP are paid through March 31, 2019

Premiums (net of MLR Rebate) in BEP: Premiums are calculated on an earned basis in the BEP. MLR rebate adjustments applied are equal to zero.

Allowed and Incurred Claims in BEP:

- Allowed claims are developed by combining paid claims with member cost-sharing. Allowed claims meet the definition in the URR instructions. They do not include provider quality incentive payments.
- Incurred claims are net of HHS CSR payments.
- CBC only covers Essential Health benefits (EHBs).
- CAAC does not include capitated services.
- Allowed and Incurred claims are net of pharmacy rebates. BEP rebates are completed based on actual utilization of rebate-eligible drugs and rebate amounts.

Estimated Incurred but Not Paid Claims: Paid claims by date of service come directly from CBC's data warehouse. The method for calculating incurred claims in the BEP is as follows:

1. Historical fee-for-service claims are viewed by date of service and date of payment in a claims triangle.
2. The claims triangle payments are then accumulated by date of service to develop factors that represent the rate of accumulation or rate of "completion".
3. Historical rates of completion by duration are used to derive projected rates of completion. Some of the methods used to develop projected completion factors are averages (e.g. harmonic averages, time weighted averages, geometric averages) and regression methods.

Numerous items are considered when viewing these averages or regression statistics, such as the impact of high claims on perceived completion patterns.

4. For durations that exhibit a projected completion factor greater than the Valuation Actuary's chosen threshold (e.g. 80% complete), cumulative paid and incurred claims are divided by the projected completion factor to arrive at ultimate incurred claims. For durations that are less than the chosen threshold, a projection methodology is used. Similar to completion factor development, projection methodologies are worthy of a lengthy discussion. In general, an ultimate incurred claims PMPM is derived by projecting a recent 12-month period to the current month(s) and seasonally adjusting.
5. With all months having both a cumulative paid amount and an estimated ultimate incurred amount, the completion factors used in pricing are calculated by taking the quotient of the two. Allowed completion and incurred completion are assumed to be identical.
6. Both allowed and paid claims in the BEP are completed by applying completion factors by incurred month developed in Step 6.

$$BEP\ Incurred\ Claims = \sum \frac{BEP\ Paid\ Claims\ by\ Incurred\ Month}{Completion\ by\ Incurred\ Month}$$

$$BEP\ Allowed\ Claims = \sum \frac{BEP\ Paid\ Claims + BEP\ Member\ Cost\ Share\ by\ Incurred\ Month}{Completion\ by\ Incurred\ Month}$$

Risk Adjustment in BEP: Risk adjustment amounts in the BEP are equal to final risk adjustment transfer amounts released on June 28, 2019.

Loss Ratio in BEP: Loss ratio is 56.38%

Credibility of Data

CAAC individual data was used to develop rates. No credibility manual is used.

Trend Identification

Trend: 7.9%

Trend levels reflect CBC's best estimate of changes in utilization, provider reimbursement contracts, the network of facilities and providers, disease management initiatives and the impact of utilization management.

The following is a description of considerations used to determine trend.

1. Base Cost/ Change in hospital and physician contracting: The contracted increase in reimbursements to hospitals and physicians is the basis of cost trends. CBC uses the following to project future costs:
 - a. Vendor Physician Cost Model and Internal Hospital Contracting Model

- i. The medical cost models use best estimates of Capital BlueCross (CBC)'s future contracting increases with physicians and hospitals. The models use cost estimates based on varying contract effective dates by physician and hospital. All facilities and providers are considered in this modeling effort (i.e. acute and non-acute, network and non-network, inpatient and outpatient, in- area and out-of-area). From there, a monthly anticipated cost (assuming static utilization) summary is produced which can be used in projecting future claims costs. Cost trends are determined at the CBC book of business level for all commercial business.
 - b. Internal Prescription Drug Trend Model
 - i. Price Inflation
 - ii. Contract Pricing
 - iii. Member Cost-Sharing
 - iv. Units per Script
 - v. Brand/Generic Mix
 - vi. Therapeutic Mix
 - vii. Cost per Script
 - viii. Pipeline (new drugs)
- 2. Utilization Considerations:
 - a. Intensity of medical services rendered
 - b. Changes in place of service (e.g. continued migration of inpatient stays to outpatient setting)
 - c. Further migration from brand prescription drugs to generic prescription drugs
 - d. Favorable impacts of value based benefits designs
 - e. Medical utilization estimates reviewed by CBC's Chief Medical Officer
- 3. Leveraging: The trend model is based on allowed cost increases. Paid claims trend at a higher rate than allowed due to leveraging. Leveraging is the impact of static cost-share, such as deductibles and copays, to the paid trend.
- 4. Intensity: Measure of cost increase due to change in treatment sophistication. An example is migration from x-rays to MRIs at significantly higher cost.
- 5. Underwriting Cycle: The underwriting cycle is defined as the tendency to swing between profitable and unprofitable periods over time. The underwriting cycle is exacerbated partly by pricing performed with incomplete information as to the level of current experience trends. A reaction delay occurs, as carriers tend to rely on measurements of past experience in developing current pricing assumptions. As a result, carriers are often increasing their pricing trends when actual experience trends have begun to decline, and decreasing their pricing trends actual trends are increasing. CBC strives to mitigate the underwriting cycle by keeping trends consistent through times of increasing and decreasing claim cost and utilization.

Historical Experience: Historical experience was not used to the develop trend.

Benefit Categories: Claims in the benefit categories displayed in URRT come directly from CBC's data warehouse. These same categories are used to develop category-level trend. See Exhibit C for a description of benefits by benefit category.

See Exhibit E for CAAC's pricing trend, as well as cost and utilization components of the pricing trend.

Rate Development & Change

Projection Factors

Changes in Morbidity: Found in URRT Worksheet 1, "Morbidity Adjustment", and PA Rate Exhibits, Table 5. The changes to morbidity is equal to the Department's Individual Adjustment factor discussed above.

Changes in Benefits: Benefit changes are not applied to allowed claims as allowed should stay consistent from 2018 to 2020. Benefit changes are applied in the development of future incurred claims, due to changes in member cost-share. This calculation is shown in Exhibit D, and applied in Exhibit G. The manual cost PMPMs are developed from CBC's internal benefit relativity model, discussed in the Plan Adjusted Index Rate section below. The benefit change is equal to member-month weighted average projected manual PMPM divided by member-month weighted average manual PMPM in the BEP. This process is further discussed in the Paid-to-Allowed section below.

Changes in Demographics: CAAC does not expect changes in demographics in its individual population.

Changes in Network: No network adjustment is applied.

Other Adjustments: No other adjustment is applied.

Benefits, Demographics, Network and Other adjustments are found in URRT Worksheet 1 and PA Rate Exhibits Table 5.

Index Rate

The experience period index rate is CAAC's allowed claims PMPM, set in accordance with the single risk pool provision. All CAAC covered benefits are categorized as Essential Health Benefits (EHBs), therefore no adjustment was made to the experience period index.

Projected Allowed Claims: The CAAC experience period allowed claims, benefit-adjusted, trended to the projection period (See Projection Factors section above), and credibility adjusted, is the *Projected Allowed Claims at Current Benefits*. This number is reflected in Worksheet 1 of URRT ("Projected Allowed Experience Claims PMPM (w/ applied credibility if applicable)").

To calculate the projected index rate:

1. Start with *Projected Allowed Claims at Current Benefits*
2. The *Projected Allowed Claims at Current Benefits* reflect EHBs 100 percent, so no adjustment needs to be made to add EHBs and remove non-EHB claim cost. This is the index rate for individuals renewing January – December.

See Exhibit J for the Index Rate.

Paid to Allowed Ratio

CAAC used the prescribed URRT allowed claim rate development methodology in conjunction with a paid and incurred rate development methodology to determine final premium rates. URRT projects allowed claims, and uses a paid-to-allowed ratio in order to adjust allowed claims to paid levels. This value is then used to develop premiums. In order to determine the paid-to-allowed ratio, CAAC projected paid and incurred claims, adjusted for benefits, to the experience period.

Projected Paid and Incurred Claims are calculated as follows:

1. Gather claims experience as described in the Data section above.
 - a. Base Experience Period (BEP) Paid Claims, Capitation, and Rx Rebates
 - b. BEP Member Months
2. Develop BEP *Paid and Incurred Claims*:

$$BEP \text{ Paid and Incurred Claims} = \frac{BEP \text{ Paid Claims}}{Completion \text{ Factor}}$$

The development of completion factors is described in Experience Period Premium and Claims above.

3. Develop the *BEP Paid and Incurred Claim PMPM*:

$$BEP \text{ Paid and Incurred Claim PMPM} = \frac{BEP \text{ Paid and Incurred Claims}}{BEP \text{ Member Months}}$$

4. Develop *Trended Claim PMPM*: Using the aggregate trend described in the Projection Factors section above, trend the BEP Paid and Incurred Claim PMPM from the midpoint of the experience period to the midpoint of the rating period.

Trended Claim PMPM

$$= [BEP \text{ Paid and Incurred Claim PMPM}] \times (1 + [Trend\%])^{Trend \text{ Months}/12}$$

5. Develop *Projected Paid and Incurred Claim PMPM*:

$$\begin{aligned}
 &\textit{Projected Paid and Incurred Claims PMPM} \\
 &= [\textit{Trended Claim PMPM}] \times [\textit{Benefit Adjustment}] \\
 &\times [\textit{Morbidity Adjustment}] \times [\textit{Other Adjustment}]
 \end{aligned}$$

The *Benefit Adjustment*, *Morbidity Adjustment*, and *Other Adjustment* are discussed in the Projections Factors section above.

6. Develop *Projected Claims PMPM by Benefit* as follows:

- a. CAAC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a \$0 office visit copayment and a \$25 ER copayment. Given a particular benefit design (for example, \$20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on cumulative probability distributions (CPDs), where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.
- b. This actuarial cost model derives a Manual Cost for each benefit design in the experience period, as well as plans being offered in the projection period. The average Manual Cost of the experience is compared to the Manual Cost of the base plan. The projected experience period data is then adjusted to the base plan:

$$\textit{Benefit Level Adjustment} = \frac{\textit{Average Manual Cost in Projection Period}}{\textit{Manual Cost of Base Plan}}$$

- c. The *Projected Paid and Incurred Claim PMPM* (Step 5) is then adjusted to the Base Plan as follows:

$$\begin{aligned}
 &\textit{Base Plan Paid and Incurred Claims PMPM} \\
 &= \frac{\textit{Benefit Adjusted Paid and Incurred Claims PMPM}}{\textit{Benefit Level Adjustment}}
 \end{aligned}$$

- d. Each additional benefit design has its own unique Manual Cost, which can then be compared to the Base Plan to develop a Benefit Relativity:

$$\textit{Benefit Relativity A} = \frac{\textit{Manual Cost of Benefit A}}{\textit{Manual Cost of Base Plan}}$$

- e. The Benefit Relativity developed in d. above is then used as a gauge to develop a final *Pricing Relativity*. This pricing relativity is developed using actuarial judgment including the following considerations:
 - i. Final premium relativities must make sense based on benefits. For example, the annual cost difference between a PPO 2000 and PPO 1000 must be less than \$1000.
 - ii. Adjustments for plan designs that fall outside of the actuarial cost model.
- a. So the *Projected Claims PMPM by Benefit* is:

$$\begin{aligned} & \text{Projected Claims PMPM Benefit A} \\ &= \text{Projected Claims PMPM Base Plan} \\ & \times \text{Pricing Relativity A} \end{aligned}$$

- b. And to arrive at the *Total Projected Claims PMPM*, CAAC assumes a distribution of members across the benefit plans being offered in 2019. The *Total Projected Claims PMPM* :

$$\begin{aligned} &= \text{Projected Claims PMPM Benefit A} \times \text{Expected Member Dist of Benefit A} \\ &+ \text{Projected Claims PMPM Benefit B} \\ & \times \text{Expected Member Dis of Benefit B} + \dots \end{aligned}$$

7. The Paid-To-Allowed Ratio is then:

$$\text{Paid to Allowed Ratio} = \frac{\text{Total Projected Claims PMPM}}{\text{Projected Allowed Claims at Current Benefits}}$$

See Exhibit G for the development of the *Paid-to-Allowed Ratio*. And see Exhibit L for the plan-level projected incurred amount development.

Risk Adjustment

Projected Risk Adjustments PMPM:

Relevant to 2020 pricing is the impact of Commercial Risk Adjustment (CRA) payment transfers that are expected to be earned in 2020. The following items are those that we deem important in generating a CRA payment transfer adjustment:

1. Risk profile of the those enrolled in CRA eligible plans for the market or state (i.e. competitors) relative to risk profile of CRA eligible membership enrolled in our plans
2. Statewide average premiums
3. Current market penetration of this company and competitors in the market and in the state
4. 2017-2018 risk adjustment results

5. Market improvement in coding risk: CBC's ACA book of business has had a churn rate that makes a multi-year perspective of member diagnosis and risk very challenging. Because closing gaps in care and coding, and a myriad of other risk adjustment functions require more than a single year of data to facilitate an accurate depiction of risk, it is believed that CBC is disadvantaged in the market. This will drive CBC's relative risk to the market down over time.

Market Adjusted Index Rate

The Market Adjusted Index Rate is calculated as the Index Rate adjusted for all allowable market-wide modifiers defined in the market rating rules, 45 CFR Part 156.80(d)(1). So,

$$\begin{aligned} &[\textit{Market Adjusted Index Rate}] \\ &= ([\textit{Index Rate}] \times [\textit{Paid to Allowed Ratio}] \\ &\quad - [\textit{Net Projected ACA Reinsurance Recoveries}] \\ &\quad - [\textit{Net Projected Risk Adjustments PMPM}] + [\textit{Exchange Fees PMPM}]) \\ &\quad \div [\textit{Paid to Allowed Ratio}] \end{aligned}$$

See Exhibit K for the development of the Market Adjusted Index Rate.

Retention Items

Administrative Expense Load:

1. Risk Adjustment User Fee: To fund the HHS-risk adjustment program, issuers will remit to HHS a fee of \$0.18 PMPM. The Risk Adjustment Fee PMPM is included in URRT Worksheet 1, URRT Worksheet 2, "Administrative Expense", and PA Rate Exhibits Table 6.
2. Administrative Expense: Calculated using an allocation method from CBC's Finance department, and trended to the rating period. Costs are allocated according to results reported through a company-wide questionnaire. On an annual basis, each cost center within the company completes a questionnaire listing the distribution of costs (in percentage terms) by product as well as by market segment. For example, the questionnaire will ask what percentage of time is spent on PPO versus HMO versus Drug versus Medicare. And separately will ask what percentage of time is spent on large group, small group, individual, and government programs. Using those distributions, all costs needed to perform the business are allocated to the proper market segments and lines of business. The administrative expense applied in the rate development is the total expense allocated to CBC individual products. Administrative expenses are included in URRT Worksheet 2, "Administrative Expense", and PA Rate Exhibits Table 6. Expense as a percentage of premium vary by plan because a fixed dollar admin PMPM is applied to each plan.
3. Broker Expense: Calculated based on CBC's explicit per contract broker fee. Broker Expense is included in URRT Worksheet 2, "Administrative Expense", and PA Rate Exhibits Table 6. CBC pays commissions for new business and renewal enrollment received during open enrollment, both on and off exchange, and in all geographic

areas. Commission is less on catastrophic plans due to the lower premium. CBC does not pay commission during Special Enrollment Periods (SEP). The 2020 broker commission schedule is yet to be finalized. Attached please find the 1/1/2019 copy of the broker agreement – redacted version. Files are as follows:

- a. Redacted Agent Agreement: “Ind_19-41_Initial_CAAC_PPO_WBEBrokerIndRedacted_Supporting_20190521.pdf”
 - b. Redacted Preferred Producer Master Agreement: “Ind_19-41_Initial_CAAC_PPO_PPMABrokerIndRedacted_Supporting_20190521.pdf”
4. Value-Based Benefits (VBB): Standard with each plan, Capital BlueCross includes wellness incentives to maximize the likelihood that consumers make positive behavioral changes, which lead to better health, and curbed health care costs for employers and employees alike. The incentive is as follows:
- a. Complete Health Risk Assessment questionnaire and receive a gift card.
 - b. Participate in an online coaching program and receive a gift card reward.
 - c. The wellness program is administered through a vendor and costs are based on vendor fees, anticipated participation, and reward card amounts.
 - d. Fees are included in overall administrative expense fee discussed above.
 - e. Included in URRT Worksheet 2 “Administrative Expense”, and PA Rate Exhibits Table 6.
5. Identity Theft Coverage: Identity protection offering will include the following components:
- a. Credit monitoring – Monitors activity that may affect credit
 - b. Fraud detection – Identifies potentially fraudulent use of identity or credit
 - c. Fraud resolution support – Assists members in addressing issues that arise in relation to credit monitoring and fraud detection
 - d. Included in URRT Worksheet 1, “Administrative Load”, and PA Rate Exhibits Table 6.
6. Additional Quality Improvement: The Final Notice of Benefit and Payment Parameters (NBPP) for 2020 finalized the rule to allow issuers to apply a standard 0.8% of premium for quality improvement (QI) measures in the MLR calculation. Additional QI amounts applied in rating equal 0.4%. Included in URRT Worksheet 2, “Administrative Expense”, and PA Rate Exhibits Table 6.

Profit (or Contribution to Surplus) & Risk Margin:

7. Contingency: Contingency is included in URRT Worksheet 1, “Profit and Risk”, and PA Rate Exhibits Table 6.

Taxes and Fees:

1. Health Insurer Fee (HIF) – Section 9010 of PPACA and Section 1406 of the Reconciliation Act (which modified PPACA) refer to HIF. The fee is a fixed-dollar amount distributed across health insurance providers: \$8 billion in 2014, \$11.3 billion in 2015 and 2016, \$13.9 billion in 2017, \$14.3 billion in 2018, and the HIF increases by the rate of premium growth for 2019 and subsequent years. There was a moratorium on the

fee for 2017 and there is a suspension on the fee for 2019. HIF is included in URRT Worksheet 2, “Taxes and Fees”, and PA Rate Exhibits, Table 6.

2. Exchange Fee – All issuers participating in a federally-facilitated exchange will remit 3% of premium to HHS. The exchange user fee is applied as an adjustment to the Index Rate at the market level. The calculation and amount is found in Exhibit K. The amount is also found in PA Rate Exhibits, Table 5.
3. Federal Income Tax: Federal Income Tax will be collected on the 2% contingency built into the premium. The projected Federal Income Tax is included in URRT Worksheet 2, “Taxes and Fees”, and PA Rate Exhibits, Table 6.

See Exhibit H for all retention values.

Plan Rate Development

The Plan Adjusted Index Rates are included in Worksheet 2, Section IV of URRT.

The following adjustments were used to derive the Plan Adjusted Index Rate:

1. Actuarial Value and Cost Sharing adjustment: The Actuarial Value and Cost Sharing Adjustment is determined using CAAC’s actuarial cost model. CAAC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a \$0 office visit copayment and a \$25 ER copayment. Given a particular benefit design (for example, \$20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a claim PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on CPDs, where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.
2. Induced Demand: Please see Table 8
3. Provider Network: The Provider network is the same across all PPO plans.
4. Adjustment for benefits in addition to EHBs: No benefits other than EHBs are included in the plans, so no adjustment is necessary.
5. Catastrophic Plans: Applied to catastrophic plans to reflect lower morbidity.
6. Adjustment for distribution and administrative costs: Described in Retention section above.
7. Tobacco Adjustment: Calculated as the average tobacco factor applied across the risk pool.

The development of the Plan Adjusted Index rate is found in Exhibit L, and summarized in Exhibit M.

Plan Premium Development for 21-Year-Old Non-Tobacco User

Age Curve Calibration: The average age factor is calculated by taking the member-weighted average of current individual enrollment by age in CAAC. Age factors are applied in accordance

with CMS's Standard Age Curve. The age calibration factor is adjusted for contracts with greater than three children under the age of 21. Please see file Ind_19-41_Initial_CAAC_PPO_List-Billed_Supporting_20190521 for the calculation.

Geographic Factor Calibration: The average geographic rating factor is calculated by taking the CAAC member-weighted average by region.

Geographic Factors: CBC performed regional analysis to quantify the cost difference between the three regions in our service area. The analysis gathered incurred claims net Rx rebates, projected risk adjustment, and premium for a 12-month period by region. The loss ratio of each region is then compared to the average loss ratio for the book of business. In theory, the change in regional rating factor is:

$$[Change\ in\ Regional\ Rating\ Factor\ Region\ A] = [Region\ A\ LR] \div [BOB\ LR]$$

But our preferred approach is to gradually change factors, so not to shock the market, while moving rates in the appropriate direction. In order to do this, the following approach is being proposed:

$$[Change\ in\ Regional\ Rating\ Factor\ Region\ A] = [Region\ A\ LR] \div [Target\ LR]$$

Where Target LR is in between Region A LR and BOB LR. With this gradual approach, annual rate change by region is shown on Exhibit Q, column G.

Tobacco Factor Calibration: Average tobacco factor is calculated using current month member by smoking status data.

The calibration is:

$$[Calibrated\ Plan\ Adjusted\ Index\ Rate] = [Plan\ Adjusted\ Index\ Rate] \div ([Age\ Curve\ Calibration] \times [Geographic\ Factor\ Calibration] \times [Tobacco\ Factor])$$

Calibrated Plan Adjusted Index Rates are found on PA Rate Exhibits Table 10.
The calibration factors and development are found on Exhibit N.

Consumer Adjusted Premium Rate Development

The Consumer Adjusted Premium Rate is developed as follows:

1. Member-Level Consumer Adjusted Premium Rate:

$$\begin{aligned} [Member - Level\ Consumer\ Adjusted\ Premium\ Rate] \\ = [Calibrated\ Plan\ Adjusted\ Index\ Rate] \times [Age\ Factor] \\ \times [Geographic\ Factor] \times [Tobacco\ Factor] \end{aligned}$$

2. $[Family\ Consumer\ Adjusted\ Premium\ Rate] = \sum [Member - Level\ Consumer\ Adjusted\ Premium\ Rate]$

With no more than three child dependents under age 21 taken into account

All consumer-level adjustments are applied uniformly to all plans in the Single Risk Pool. These adjustments do not vary by plan. Age and Geographic factors are displayed in Exhibits O.

Base Rates, i.e. Calibrated Plan Adjusted Index Rates, are found on Exhibit P.

AV Metal Values

The AV Metal Values included in URRT Worksheet 2 and PA Rate Exhibits, Table 10 were based on the federally issued AV Calculator.

See AV Screenshots included with the submission.

AV Pricing Values

All AV Pricing values were developed using CAAC's actuarial cost model and actuarial judgment as described in section Paid to Allowed above. Differences in health status are not included.

Projected Loss Ratio

See Exhibit I for the projected loss ratio calculation. The projected loss ratio is calculated using the federally prescribed MLR methodology.

Membership Projection

The membership projections found in Worksheet 2 of URRT were developed by assuming moderate growth and similar distribution to current.

Actuarial Statement

I, [REDACTED], ASA, MAAA, am of the opinion that this filing is in compliance with the applicable Federal and State Laws and Regulations concerning the Patient Protection and Affordable Care Act and the Health Care and Education Reconciliation Act of 2010.

I, [REDACTED], ASA, MAAA, do hereby certify that:

1. This filing has been prepared in accordance with the following:
 - a. Actuarial Standard of Practice No. 5, “Health and Disability Claims”
 - b. Actuarial Standard of Practice No. 8, “Regulatory Filings for Rates and Financial Projections for Health Plans”
 - c. Actuarial Standard of Practice No. 12, “Risk Classification”
 - d. Actuarial Standard of Practice No. 23, “Data Quality”
 - e. Actuarial Standard of Practice No. 25, “Credibility Procedures Applicable to Accident and Health, Group Term Life, and Property/Casualty Coverage”
 - f. Actuarial Standard of Practice No. 26, “Compliance with Statutory and Regulatory Requirements for the Actuarial Certification of Small Employer Health Benefit Plans”
 - g. Actuarial Standard of Practice No. 41, “Actuarial Communications”.
2. The index rate is:
 - a. Projected in compliance with all applicable state and federal statutes and regulations (45 CFR 156.80(d) (1)).
 - b. Developed in compliance with the applicable Actuarial Standards of Practice.
 - c. Reasonable in relation to the benefits provided and the population anticipated to be covered.
 - d. Neither excessive nor deficient.
 - e. Adjusted by only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) to generate plan level rates.

3. The percent of total premium that represents essential health benefits were calculated in accordance with actuarial standards of practice.
4. The AV Calculator was used to determine the AV Metal Values shown in Worksheet 2 of the Part I Unified Rate Review Template for all plans, and in accordance with CFR 156.135(b)(2) as necessary. For any plan requiring an alternative method, the development of the actuarial value is based on one of the acceptable alternative methods outlined in 156.135(b)(2) or 156.135(b)(3) for benefits that deviate substantially from the parameters of the AVC and have a material impact on the actuarial value.
 - a. The analysis was
 - i. conducted by a member of the American Academy of Actuaries, and
 - ii. performed in accordance with generally accepted actuarial principles and methods.
5. Geographic area rating factors reflect only differences in the costs of delivery and not differences due to population morbidity.
6. All factor, benefit and other changes from the prior approved filing have been disclosed in the actuarial memorandum.
7. New plans cannot be considered modifications of existing plans under the uniform modification standards in 45 CFR 147.106.
8. The information presented in the PA Actuarial Memorandum and PA Actuarial Memorandum Rate Exhibits is consistent with the information presented in the Rate Filing Justification.

CAPITAL ADVANTAGE ASSURANCE COMPANY, INC.
RFJ Part II – Consumer Friendly Justification

Changes being requested are based upon consideration of the factors that influence future period cost structures. The primary drivers of change in future costs are:

- Anticipated increase in facility and physician unit costs
- Anticipated changes in prescription drug unit costs
- Continuing change in utilization such as
 - Intensity of medical services rendered
 - Changes in place of service (e.g. continued migration of inpatient stays to outpatient setting)
 - Further migration from brand prescription drugs to generic prescription drugs
 - Favorable impacts of value based benefits designs
- Prescription drug patent expirations and new to market brand drugs
- Leveraging associated with unchanged cost share components such as deductible and copays
- Reimplementation of the Health Insurer Fee in 2020
- Inflation adjustment to administrative expenses

2020 Rates Table Template v9.0		All fields with an asterisk (*) are required. To validate press Validate button or Ctrl + Shift + I. To finalize, press Finalize button or Ctrl + Shift + F.			
		If you are in a community rating state, select Family-Tier Rates under Rating Method and fill in all columns.			
		If you are not in a community rating state, select Age-Based Rates under Rating Method and provide an Individual Rate for every age band.			
		If Tobacco is Tobacco User/Non-Tobacco User, you must give a rate for Tobacco Use and Non-Tobacco Use.			
		To add a new sheet, press the Add Sheet button, or Ctrl + Shift + H. All plans must have the same dates on a sheet.

Individual Rates
Filing No 19-41
TOI Code: H15I Individual Health – Hospital/Surgical/Medical Expense
Sub-TOI Code: H15I.001 - Hospital/Surgical/Medical Expense
Filing Type: Rate**

Dear [REDACTED]:

CAAC received an objection letter from the Department dated June 18, 2019. CAAC is providing the following in response to the objection letter:

- Q&A written response
- Q&A exhibits
- Health Insurer Fee calculation workbook and memo
- Historical financial statements
- Risk adjustment calculation workbook
- Revised List-Billed adjustment workbook
- Revised Rate Development workbook
- Revised PAAM Exhibits to reflect the change in RA User Fee application and other requested changes
- Revised URRT
- Revised Rates (PA and Federal Templates)
- Revised Memos – Actuarial, Cover Letter, and Rate Change Summary

All changes are due to PID requests/questions and have been disclosed in the Q&A written response. The change to RA User fee application does slightly impact rates (\$0.01 - \$0.02).

If you have any questions regarding this filing, please call me at [REDACTED] (or via email at [REDACTED]) or [REDACTED] at [REDACTED] ([REDACTED]). Thank you for your assistance in this matter.

Harrisburg, PA 17177 | capbluecross.com

Sincerely,

[REDACTED]

Question and Answer Individual Rates Effective January 1, 2020

With this response, please find corresponding Q&A Exhibits in Ind_19-41_Initial_CAAC_PPO_Q&AExhibits1_Supporting_20190625.xlsx

Question 1. The updated URR instructions require an explanation of how morbidity was removed from impacting the variance in rate changes across products and plans. Please direct us to or provide this explanation

Answer 1. As described in Actuarial Memo, page 12, Plan Adjusted Index Rates (PAIR) are calculated using only allowable rating variables. Actuarial Value and Cost Sharing Adjustment is calculated by using CBC's internal actuarial cost model, which does not use morbidity to determine pricing AV, rather uses average cost and utilization by service to determine impact of cost-sharing. Other rating factors such as network are determined by contract savings rather than morbidity of the population selecting narrow network plans.

Question 2. Page 3 of your actuarial memorandum says, "Transitional membership is included in PA Rate Exhibits Table 2 and is broken out in Exhibit G1" although a few sentences prior it says the single risk pool reflects non-grandfathered, non-transitional covered lives. Please explain if transitional business was included in the experience on the URRT and PAAM and if so, please explain the adjustment made for the transitional plans in the base period data when projecting the 2020 rates for non-transitional plans including quantitative support and where the adjustment is made.

Answer 2. Transitional business is not included in base experience period. The Actuarial memo has been corrected to reflect this.

Question 3. Please confirm that CAAC does not have capitated services and did not in the experience period. If capitated services are not included why do the trends on the PAAM show 0.08% weight for capitation.

Answer 3. CAAC does not have capitated services. Because CAAC products are offered alongside products from other CBC subsidiaries, for rate development, trend is intentionally equalized across subsidiaries. This so rates are aligned appropriately based on benefits. CAAC data is combined with subsidiaries, CAIC and KHPC, to form the weights applied to trend. Capitation is attributable to KHPC, but the combined trend weight is used in all Individual rate filings.

Question 4. Please provide the date of the enrollment that is included on WS 2 of the URRT cell D34.

Answer 4. Enrollment is as of February 15, 2019.

Question 5. Please list and provide the measurement used for each category included in “Other Medical” and the number of units and cost for each.

Answer 5. Please see Q&A Exhibit 1 for the data requested.

Question 6. Please explain where the changes in benefit cost sharing shown in Exhibit B_BenChange in file Ind_19-41_Initial_CAAC_PPO_RateDev_Supporting_20190521 between 2019 and 2020 were reflected

Answer 6. The changes in benefit cost sharing are reflected in Exhibit D, Benefit Mix. This exhibit measures the benefit change from the Base Experience Period (BEP) to the rating period. The manual cost measurement in both the BEP and rating period reflect the benefits accordingly. Actuarial Memo, pages 6 and 8 further describe adjustments for benefits.

Question 7. Please explain how adjustments were made for large claims in the base period that may not be repeated or that may be increased in 2020.

Answer 7. No explicit adjustment is made for large claims. In a large population, these claims are assumed to reflect future claim costs.

Question 8. Please confirm that there was no private reinsurance for this business or explain how and where it was reflected.

Answer 8. I confirm that there is no private reinsurance for this business.

Question 9. Please provide quantitative support for the Pricing AVs in Table 10

Answer 9. Actuarial Value and Cost Sharing adjustment: The Actuarial Value and Cost Sharing Adjustment is determined using CBC’s actuarial cost model. CBC uses an actuarial cost model to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a \$0 office visit copayment and a \$25 ER copayment. Given a particular benefit design (for example, \$20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a claim PMPM by service, summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on CPDs, where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.

The model calculates both an average allowed and paid manual cost PMPM. $\text{Paid Manual Cost PMPM} / \text{Allowed Manual Cost PMPM} = \text{Pricing AV}$.

Question 10. Please explain why the projected paid-to-allowed ratio (0.764) in Table 5 is so much higher than the Metallic Tier weighted average AV (0.669) and the weighted average pricing AV(0.660) as shown in Table 10.

Answer 10. As further explained in answer 15 below, my approach to pricing AV and induced demand results in (pricing AV) x (induced demand) = approximate paid-to-allowed ratio. This is because pricing AV is determined from CBC's internal actuarial cost model. The model is described in the Actuarial Memo, page 8, bullet 6a. The model calculates both an average allowed and paid manual cost PMPM. Paid Manual Cost PMPM / Allowed Manual Cost PMPM = Pricing AV. Induced demand is then calculated as described in answer 19 below in order to establish a true projected cost for each plan. For this reason, the product of pricing AV and induced demand must be compared to paid-to-allowed ratio.

Question 11. Please explain why the PA estimated 2018 risk adjustment was not used.

Answer 11. For the filed 2018 estimate, PA estimated risk adjustment was released too close to the submission of the filing. Data by HIOS and inputted in other exhibits was already completed at the time. CBC does intend to update the 2018 base experience period once final RA results are released at the end of June.

For the 2020 estimate, Please see "Ind_19-41_Initial_CAAC_PPO_RACalc_Supporting_CONF_20190625.xlsx" for the CBC's best estimate to date of CAAC Individual 2019 risk adjustment transfer payment PMPM. While 2018 actual transfer payment is useful in calculating future years, our best estimate of 2019 given our current population is most indicative of 2020 payments. The following are key points:

- CBC collects and tracks member risk score information using the HHS risk model. This is referred to as Care Modeler data in the documentation.
- The data for this analysis is CAAC Individual member risk for members effective 1/1/2019 – 4/30/2019.
- CBC recognizes that risk through 4 months of the year requires maturity factors to estimate a 12-month risk score. A maturity factor is applied to the 4-month risk scores, which is calculated from 2018 actual risk score factor growth.
- Market risk scores and other factors are assumed flat from 2018.
- While \$107.47 is the calculated transfer receivable, \$110 is used as a placeholder until RA results are finalized.

Question 12. Please explain how you plan to determine the projected 2020 risk adjustment transfer amount once HHS releases them for 2018.

Answer 12. I plan to take the same approach as above, starting with 2018 actual and making the above adjustments for current enrollment.

Question 13. Please provide the calculation of the \$110.00 paid basis risk adjustment showing the federal transfer formula including the relative risk of the block compared to the market.

Answer 13. Please see Answer 11 above and corresponding exhibits for the calculation of the risk adjustment transfer. While \$107.47 is the calculated transfer receivable, \$110 is used as a placeholder until RA results are finalized.

Question 14. The development of the exchange fee in Exhibit K uses an average Exchange premium of \$844.73, however, the average premium for the on-exchange plans on the URRT WS 2 weighed by projected membership produces an average premium of \$810. Please explain this discrepancy.

Answer 14. The average exchange fee premium used is current on-exchange premium as of 201902. The 2020 proposed 3% annual increase is not applied. Please note that on-exchange premium is higher than off-exchange due to CSR defunding, and off-exchange enrollees having an off-exchange silver plan option without the CSR defunding factor applied.

Question 15. We note on Table 10, that you have not normalized the benefit richness (column L). Please resubmit your filing with the benefit richness normalized.

Answer 15. The rates are normalized for benefit richness. This is done by the following steps:

1. Calculate projected claim cost + market level adjustments by plan. For example, the projected claim cost PMPM for plan 45127PA0020013 is \$870.59.
 - a. Total Projected Claim Cost is \$757.47 at an average projected medical and Rx benefit level (value for relativity purposes only) of 289.02. See Exhibit D_BenMix.
 - b. Plan 45127PA0020013 medical and Rx benefit level is 332.26. Benefit relativity to average projection period is .87. See Exhibit L_RateDev cell F10.
 - c. Plan 45127PA0020013 projected claim cost PMPM is $\$757.47 / .87 = \870.59
 - d. Plan 45127PA0020013 projected claim cost PMPM + market level adjustments = $870.59 - \text{RA PMPM} + \text{Exchange Fee PMPM} = 870.59 - (110.00) + 22.25 = 782.84$
2. Calculate Induced Demand by plan
 - a. Induced Demand is the factor needed after MAIR x allowable rating factors in order to establish (1) above.
 - b. Plan 45127PA0020013 MAIR x Pricing AV x Network = $875.86 \times .72 \times 1.0 = 629.29$
 - c. Induced Demand = $782.84 / 629.29 = 1.24$
3. The final projected claim cost by plan is not inflated for induced demand, rather reflects the plan-level claim cost in relation to the total projection period claim cost.

Question 16. Please explain why the retention in Exhibit L do not match Table 6 of the PAAM. For instance, the broker fees are shown as \$3.26 PMPM in Exhibit L and \$3.14 PMPM in the PAAM.

Answer 16. The percent of premium calculated in Exhibit L is $\$3.26 / (\text{average projected premium in the rating period})$. The projected average premium in rating period includes adjustment for CSR defunding. It seems that PAAM PMPMs are calculated as average premium

(before CSR defunding adjustment) x (above calculated percent of premium), causing the discrepancy.

Question 17. Please provide the development of the health insurer fee of 2.89%.

Answer 17. Include memo from Doug. Please see “Ind_19-41_Initial_CAAC_PPO_HIFCalc_CONF_Supporting_20190625.xlsx” for the requested data.

Also, please see “Ind_19-41_Initial_CAAC_PPO_HIFCalcMemo_CONF_Supporting_20190625.pdf for a detailed explanation of the HIF calculation provided by CBC’s Accounting Department.

Question 18. Please provide support for the geographic factors and prove that they do not reflect morbidity. It appears that target loss ratios were used compared to actual loss ratios that could reflect morbidity.

Answer 18. Exhibit Q Regional Analysis provides actual loss ratio by region adjusted for risk adjustment (RA). The RA adjustment ensures that morbidity is not reflected in the geographic factors.

Question 19. Please explain the changes in the regional factors in Exhibit N from the prior filing.

Answer 19. Regional rating factor changes are driven by cost variance in region 7 from what was projected in prior filings. As seen in Exhibit Q, region 7 costs (adjusted for risk adjustment) are higher than target and higher relative to other regions (also adjusted for risk).

Question 20. The PCORI fee should not be used in the 2020 MLR calculation. Please revise the MLR calculation.

Answer 20. Exhibit I, Projected Loss Ratio has been corrected to remove PCORI fee.

Question 21. Please explain what is driving the significant increase in membership from the base period to the projection period

Answer 21. CAAC saw significant enrollment increase on 1/1/2019, due to competitive PPO rates (even in relationship to competitor EPOs) in more counties effective on that date. CAAC membership changed from 29,601 on 201812 to 45,626 as of 201902.

Question 22. Please explain how your accrued medical incentive pool and bonus amounts and policy reserves from your financial statement were taken into account in your rate development.

Answer 22. Accrued medical incentive pool and bonus amounts are not explicitly considered in the rate development. But quality incentive amounts are added to retention, which would include these amounts. CBC does not accrue for policy reserves in this market segment.

Question 23. Please provide a statement in your actuarial certification that certifies that the geographic area rating factors reflect only differences in the costs of delivery and not differences due to population morbidity.

Answer 23. The actuarial certification has been updated to include the requested statement.

The following additional questions or comments are from PID.

Question 24. URRT versus PAAM Exhibit Tables – Please explain and correct the following discrepancies:

- a. The cost sharing is \$52,764,387 in Tables 2 and 4 of PAAM but \$45,653,457 on WKST 2, Section II of URRT (cell D28)
- b. Incurred claims are \$248,270,191 in Table 2 of PAAM and WKST 1 of URRT but \$255,381,120 in WKST 2, Section II (cell D30)
- c. Risk Adjustment Transfer Amount is \$33,481,927 in Table 2 and URRT WKST 1 but \$26,785,542 on WKST 2 of URRT (cell D31)
- d. Current Enrollment is 45,626 in Table 1 of PAAM and 45,535 on WKST 2 of URRT (cell D34)

Answer 24.

- a. WKST 2, Section II of URRT has been corrected and now matches Tables 2 and 4 of PAAM.
- b. WKST 2, Section II of URRT has been corrected and now matches Table 2 (net rebates) of PAAM and WKST 1 of URRT.
- c. WKST 2 of URRT is corrected to match Table 2.
- d. WKST 2 of URRT is corrected to match Table 1.

Question 25. Trend - Please provide the worksheet with all the data used in the development of the trends. Please include all the adjustment factors used such as average age factor, product adjustment factor, average geographic factor, average tobacco factor, average benefit factor and please provide the normalized average PMPM.

Answer 25. Please see Actuarial Memo page 4 for a full description of the process used to determine trend. Future cost is used to determine pricing trend, using CBC's hospital, physician and prescription drug contracting models, as well as utilization projections monitored by CBC's medical director.

While historical data is not used to determine trend, please see Q&A Exhibit 2 for CBC's official trend report as of 201905 by market segment. Individual allowed trend is running at 7.8%, compared to filed trend of 8.7%. The difference between 7.8% actual and 8.7% can be justified by leveraging impact. Last year's CAAC Individual filing, CABC-131454875, justified leveraging of 1.6%, which would put actual + leveraging = 9.4%. You can also see a year prior the trend was 20.6%.

Please note, separate from trend, that cost-sharing changes to plans are reflected in the rate development, in the development of projected incurred claims. The adjustment from BEP to rating period is 0.95, reflecting the changes in member cost-sharing between the two period.

Question 26. Exchange User Fee – Please document the development of the 3.4% fee on URRT WKST 1. Please note that the fee is capped at 3%.

Answer 26. The exchange user fee is calculated as follows:

1. Exchange Fee PMPM Paid Basis = (average on-exchange premium) x (average on-exchange enrollment) x .03 = 22.25
2. Exchange Fee PMPM Allowed Basis = Exchange Fee PMPM Paid Basis / (paid-to-allowed factor) = 22.25/.765 = 29.10
3. MAIR = 875.84 (see Table 5)
4. Exchange User Fee Percent of MAIR = Exchange Fee PMPM Allowed Basis / MAIR = 29.10 / 875.84 = 3.32%

Please note that 3.32% is on an allowed basis as required by the formulas in PAAM Table 5. Exchange Fee PMPM Paid Basis = 22.25. That is estimated to be 22.25/844.73 (average on-exchange premium) = 2.6%

Question 27. Paid-to-Allowed Ratio - Please explain why you believe that the method you have used in the calculation of the Paid-to-Allowed Ratio is more reasonable than the PID recommended calculation as per the formula in cell C28 of Table 5 of PAAM. The formula is auto-calculated from entries made for Plan Pricing AVs, Non-Funding CSR adjustment and Total Covered Mapped Lives as of 2/1/2019. The issuer may over-write the formula and use projected enrollment, if appropriate.

Answer 27. Please see the answer to 15 above. Because of my approach to pricing AV and induced demand, the paid-to-allowed ratio is better reflected by the product of the two variables. The calculated paid-to-allowed ratio is projected incurred claims / projected allowed claims as seen on Exhibit G, Paid-to-Allowed.

Question 28. HIF calculations in Exhibit H_Ret – Please document the calculations of the factors of 2.894% (2020) and 3.238% (2021) and include all the data and assumptions used such as market share.

- a. Provide the actual paid HIT fees on a PMPM and percent of premium for calendar years 2018 and 2016.

Answer 28. Please see “Ind_19-41_Initial_CAAC_PPO_HIFCalc_CONF_Supporting_20190625.xlsx” for the requested data. Tab 1 contains actual amounts for 2018 and 2016.

Also, please see “Ind_19-41_Initial_CAAC_PPO_HIFCalcMemo_CONF_Supporting_20190625.pdf for a detailed explanation of the HIF calculation provided by CBC’s Accounting Department.

Question 29. Age Calibration Factor – Please explain the discrepancy between the List-Billed Adjustment for Max 3 Children of 1.003697 in the PAAM support Tab “Exhibit N_Calibration” and 1.00294 in the workbook “Ind_19-41_Initial_CAAC_PPO_List-Billed_Supporting_20190521”.

Answer 29. With this submission, the List Billed data has been corrected, and the result matches the factor applied in Exhibit N. See “IND_19-41_Revised_CAAC_PPO_List-Billed_Supporting_20190625.xlsx”

Question 30. Risk Adjustment – Please provide the calculation of the Projected RA PMPM that will be used in Table 5 of PAAM, starting from the CMS RA amount and billable member-months, after you replace the current place-holder of \$110.00. This issue is in anticipation of any further question that PID may ask after you make the change. Please note that this change will impact the rate change.

Answer 30. Please see Answer 11 above and corresponding exhibits for the calculation of the risk adjustment transfer. While \$107.47 is the calculated transfer receivable, \$110 is used as a placeholder until RA results are finalized.

Question 31. Please provide an exhibit that shows, by HIOS Plan ID, summary benefit and cost sharing changes for 2020 relative to the 2019 design for all plans to be offered in 2020. Include Pricing AV columns for 2019 and 2020. Please show the approved 2019 Pricing AVs for all plans in the 2019 column and the proposed 2020 Pricing AVs in the 2020 column.

Answer 31. Please see updated Exhibit B, Benefit Change Summary, that now includes the change in Pricing AVs.

Question 32. Risk Adjustment Data Validation process (RADV) -

- a. Please describe any adjustments or considerations made due to the Risk Adjustment Data Validation process (RADV).
- b. As you know CMS is performing a risk adjustment validation starting with 2017 risk adjustment data. We are considering allowing an estimate of the impact of risk adjustment modifications in rate filings as an adjustment to the projected risk adjustment. Before implementation, we are soliciting feedback from our issuers on the pros and cons of the inclusion of this adjustment. If allowed, all issuers would be required to submit an estimate. The estimate may be \$0. Please provide any feedback that you would like us to consider.

Answer 32.

- a. No adjustment was made for RADV.
- b. In 2017, Pennsylvania had a -0.15% Individual Market error rate for Non-Exiting issuers. Small Group and Catastrophic had 0% error rates. While CBCI had a 0% error rate in both market segments, the total error rate is applied to statewide average risk scores. Because of the Individual error rate and CBC's zero error rate, we can expect

receivable estimates to decrease and payable estimates to increase. Due to these findings, CBC would likely submit a non-zero estimate for the impact of RADV.

Question 33. Induced Utilization Exhibit – Please provide Exhibit B: Induced Utilization Exhibit as per PA Rate Filing Guidance, Page 15.

- a. Please confirm that the ratio in Column (9) represents the pure induced utilization for each plan.
- b. Please show quantitatively, including an Excel spreadsheet with formulas, the derivation of the AV and cost sharing factors for each plan. Please note that it is assumed that the AV and cost sharing factor includes the average tobacco factor.
- c. Please provide any additional justification for induced utilization assumptions in the Company's pricing.
- d. Please confirm that each plan's induced utilization factor was normalized by an aggregate factor, and that the resulting sum product (against 2/1/2019 membership or the projected membership distribution) produces
- e. Please quantitatively demonstrate the calculation of the induced calibration factor.
- f. Please quantitatively show and provide a detailed description as to how the induced demand factor shown in Table 7 relates to the induced utilization factors calculated in the "Induced Utilization Exhibit" shown in the Actuarial Memorandum.

Answer 33. Table B was provided with the original submission (file updated with Q&A response). Please see "IND_19-

41_Revised_CAAC_PPO_RateDev_Supporting_20190625.xlsxb"

- a. Column (9) represents the pure induced utilization for each plan.
- b. Provided in Table B.
- c. Please see Answer 15 above.
- d. Please see Answer 15 above. Induced demand is normalized so that projected claims are not overstated.
- e. Provided in Table 8 and Answer 15 above.
- f. With this submission, Table 7 is corrected to show the average induced utilization and ties to Table B.

Question 34. Please provide an exhibit showing the actual experience for calendar years 2014 – 2018 and the projections for 2019 and 2020 for the following categories: Member months, total administrative expenses, total incurred claims, total premium, total actual paid taxes and fees, profit, annual underwriting gain/loss and underwriting gain/loss PMPY. Also show how the financial gains and losses reconciles with the Annual Financial Statements for those periods.

Answer 34. Please see "Ind_19-

41_Initial_CAAC_PPO_FinancialStatements_Supporting_20190625.xlsx" for the requested data. This is taken directly from CBC's Annual Financial Statements.

Question 35. Please show the development of the average commission as shown in Table 6. Additionally, the current and 2020 broker agreements should be included and used to develop the percent shown in Table 6 as well as the associated PMPM cost.

Answer 35. Individual broker commissions amounts are expected to be unchanged between 2019 and 2020. The broker PMPM applied in rating is equal to the actual Individual broker PMPM as of March 2019, as reported in CBC's financial line of business reports. Current broker agreements were provided with the original submission:

- Ind_19-41_Initial_CAAC_PPO_PPMABrokerIndRedacted_Supporting_20190521.pdf
- Ind_19-41_Initial_CAAC_PPO_WBEBrokerIndRedacted_Supporting_20190521.pdf

While 2020 agreements are yet to be finalized, CBC does not expect to make changes.

Question 36. We have repurposed row 54 to capture RA User Fees. Please provide the RA User Fee percentage and PMPM amount in cells C54 and D54, respectively.

Answer 36. The changes have been made to our calculations and PAAM Exhibits are updated with this submission.

Question 37. Please confirm that you have tested to ensure that the rates in Table 11 of the Actuarial Memorandum Exhibits, PA Plan Design Summary and Rate Tables, Federal Rates Template and the binder are identical.

Answer 37. I confirm that I have tested to ensure rates in PAAM Exhibits Table 11, PA Plan Design Summary and Rate Tables, Federal Rates Template and the binder are identical.

Question 38. For the expanded Bronze plans, please demonstrate that the copay is less than or equal to 50% coinsurance for that category.

Answer 38. Plan 45127PA0020020 meets expanded bronze criteria because specialty Rx is offered at 50% coinsurance with no deductible.

Question 39. Please provide an exhibit that quantitatively shows a comparison of the actual to projected claim cost PMPMs for calendar years 2015 – 2018, as applicable.

Answer 39. Please see Q&A Exhibit 3 for the requested data.

Filing No 19-41
TOI Code: H15I Individual Health – Hospital/Surgical/Medical Expense
Sub-TOI Code: H15I.001 - Hospital/Surgical/Medical Expense
Filing Type: Rate**

Dear [REDACTED]:

CAAC received an objection letter from the Department dated July 5, 2019. CAAC is providing the following in response to the objection letter:

- Q&A written response
- Q&A exhibits
- Risk adjustment calculation workbook
- Revised Rate Development workbook
- Revised PAAM Exhibits
- Revised URRT
- Revised rates (PA and Federal Templates)
- Revised memos – Actuarial, Cover Letter, and Rate Change Summary

Also, as requested, a public filing is being submitted with the objection response.

All changes are due to PID requests/questions and have been disclosed in the Q&A written response. Requested rates have changed due to finalized 2018 risk adjustment results released on June 28, 2019, and updated CBC 2019 risk data as of May 2019, as well as a change to filed trend.

If you have any questions regarding this filing, please call me at [REDACTED] (or via email at [REDACTED]) or [REDACTED] at [REDACTED] ([REDACTED]). Thank you for your assistance in this matter.

Harrisburg, PA 17177 | capbluecross.com

Sincerely,

[REDACTED]

Question and Answer Individual Rates Effective January 1, 2020

With this response, please find corresponding Q&A Exhibits in Ind_19-41_Initial_CAAC_PPO_Q&AExhibits1_Supporting_20190712.xlsx

Question 1. Based Follow-up to question 6: Where are the benefit adjustments reflected on the PAAM and on the URRT?

Answer 1. The benefit adjustment is reflected in the paid-to-allowed ratio. The paid-to-allowed ratio is developed in Exhibit G, Paid-to-Allowed Ratio Development. The calculation includes the benefit change factor (line 8).

Question 2. Follow-up to questions 9, 10, 15, and 29: please provide more information on the model described in the Actuarial Memo, page 8, bullet 6a.

- a. Does this model use actual claims experience?
- b. Is the pricing AV being calculated at the metal level using experience from the metal level?
- c. Please demonstrate that the resulting pricing AV does not reflect morbidity?

Answer 2.

CBC uses Milliman, Inc. Health Cost Guidelines Commercial Rating Structures (for active employees) to develop benefit relativities. To help answer questions, I am pulling from Milliman's methodology description. Anything in quotations is directly from Milliman, Inc.

- a. "Milliman utilizes an enrollment and utilization database of full medical and prescription drug claims experience for over 78 million lives, of which approximately 41 million lives were selected and used as the primary source in developing the [model]. Other sources include a database of inpatient admission representing a large percentage of all admissions nationwide, retail pharmacy information, and other reference data sources."
 - I. CBC adjusts nationwide data to CBC's average costs and contracting in our service area.
- b. The pricing AV is not calculated using the experience of that metal level. Instead, CBC uses the actuarial cost model noted above to measure the impact of cost-sharing designs on cost and utilization amounts by service category. The cost model shows frequency per 1,000 per year by type of service (IP, OP, Professional), and allowed cost per service for each of the same types of service, normalized to a \$0 office visit copayment and a \$25 ER copayment. Given a particular benefit design (for example, \$20 office visit copayment), utilization is adjusted from the benchmark based on assumed utilization change factors, and cost per service is reduced by the copayment or coinsurance per service. Cost and utilization are multiplied together to derive a PMPM by service,

summed for all services. The impact of global deductible, coinsurance, and out-of-pocket max is then measured based on cumulative probability distributions (CPDs), where the value of services that apply to the CPDs adjusts the level of the curve, as well as global utilization adjustments.

- c. Two points on how the model does not reflect morbidity:
 - I. The model pulls from millions of lives and adjusts relative value by only the value of cost-sharing and differences in utilization (for example, cost barriers to emergency room care such as \$500 copay, will not only reduce ER costs by \$500, but more than \$500 because members will find alternative, less costly care).
 - II. The actuarial model is intended to produce benefit relativities that are offered to employers with several benefit options. Small Groups are able to select up to five benefit options. If the value of morbidity is priced into lower AV plans, higher morbidity members will begin to choose those plans because the difference in premium outweighs the difference in benefits (members can set premium dollars aside to pay for the extra cost-sharing). That will result in the deterioration of lower AV plans, and pricing would then be modified. For this reason, the model is designed to not reflect morbidity by plan. The same model/methodology is used in the Individual market.

Question 3. Follow-up to question 14: if we understand correctly you used the current on-exchange premium rather than the projected on-exchange premium to calculate the projected exchange user fee. Since the exchange user fee will be paid on the projected premium in 2020, please correct this.

Answer 3. With this submission, CAAC has updated its risk adjustment estimate, netting a lower rate change. Considering the rate change is approximately 1% in total and could be less if more members move from Gold to lower AV plans. And because the exchange fee calculation is circular (as the exchange fee changes, the projected premium changes), it seems reasonable to use current on-exchange premium as an approximation of projected on-exchange premium.

Question 4. Follow-up to question 15: according to the URRT instructions, the induced utilization must be normalized. This adjustment should be made in Table 10 since the induced demand cannot be used to increase or decrease the projected index rates only to adjust between plans. The normalization can be done based on projected membership rather than the default in Table 10.

Answer 4. With this submission, I have changed my methodology described in question 15. The same calculation is performed but the results of 2c are now an interim step in the pricing AV calculation. 2c factor is applied to the pricing AV previously reported. Induced demand is 1.03 for Gold and 1.0 for all other plans (CBC does not offer Platinum plans in the Individual market).

Question 5. Follow-up to question 18: How were target loss ratios for each region developed and why do they vary by region?

Answer 5. The target loss ratios are described below. The purpose of varying target loss ratios is to incrementally change regional rating factors. For example, if region 7 would be priced based on an average target loss ratio, rates would increase by approximately [requested rate change] + 7% (region 7 projected LR (without GRA rating factor change) – avg target LR). But the incremental approach results in [requested rate change] +4%.

CBC performed regional analysis to quantify the cost difference between the three regions in our service area. The analysis gathered incurred claims net Rx rebates, projected risk adjustment, and premium for a 12-month period by region. The loss ratio of each region is then compared to the average loss ratio for the book of business. In theory, the change in regional rating factor is:

$$[\text{Change in Regional Rating Factor Region A}] = [\text{Region A LR}] \div [\text{BOB LR}]$$

But our preferred approach is to gradually change factors, so not to shock the market, while moving rates in the appropriate direction. In order to do this, the following approach is being proposed:

$$[\text{Change in Regional Rating Factor Region A}] = [\text{Region A LR}] \div [\text{Target LR}]$$

Where Target LR is in between Region A LR and BOB LR. With this gradual approach, annual rate change by region is shown on Exhibit Q, column G.

Question 6. Follow-up to question 25: to support the leveraging factor, please provide your paid claim trends and allowed claim trends for the last 5 years showing that the paid trends are higher than the allowed trends.

Answer 6. With this submission, the trend leveraging adjustment has been removed.

Question 7. Follow-up to question 26: the exchange user fee should be allocated to all enrollment on and off-exchange. Reviewing your calculation, it does not consider off-exchange enrollment. (i.e. Exchange User Fee is calculated as a weighted average of on and off-exchange enrollment). Please correct.

Answer 7. From question 26, step 1:

Exchange Fee PMPM Paid Basis = (average on-exchange premium) x (average on-exchange enrollment) x .03 = 22.25

(average on-exchange enrollment) represents the percentage of enrollees on exchange. That amount is then spread across on and off exchange enrollees.

Question 8. Follow-up to question 33.e: Why is the average benefit richness in Table 7 0.74 when the benefit richness for the one plan is 1.229. It appears that Table 7 is the inverse and not the average. Please correct Table 7 to be the average benefit richness and use the resulting normalization factor. This should be coordinated with question 3 above.

Answer 8. It seems by reviewing Table 8 benefit richness formula (cell K82), that Table 7 benefit richness must be the inverse of the benefit richness factor found in III Plan Rates L15. Otherwise the formula in Table 8 produces $[\text{III Plan Rates L15}]^2$.

Question 9. Follow-up to question 34: Your reply did not include the financial information for the 2019 and 2020 projections. Please provide the financial information for 2019 and 2020 projections.

Answer 9. Please see Q&A Exhibit 1 for projected 2019 and 2020 results.

Question 10. Please revise the Actuarial Memorandum Page 3, Benefit Changes 2019-20, to correct the date from 2018 to 2020.

Answer 10. The actuarial memorandum, page 3, has been corrected.

Question 11. The Revised PAAM exhibits is not using the template sent by PID on June 18, 2019. Table 6 does not show the Risk Adjustment User Fee in Row 54. Please upload the corrected version.

Answer 11. With this submission, the correct template is being used.

Question 12. Question 38 of June 18, 2019 letter – Is there any major benefit category other than Rx to which deductible is not applied. If there is, please demonstrate quantitatively that the proposed cost sharing (copay or coinsurance) for those major categories is less than or equal to 50% of the Projected Average cost to provide the service in your rating area.

For example: for the following categories -

Copay Projected Average cost 50% Projected Av cost Primary care \$30 \$94
\$47 Specialty care \$60 \$203 \$101.50

Hence in both cases, the copay is less than 50% of the Projected Average cost i.e. 50% coinsurance for the category.

Answer 12. Plan 45127PA0020020 meets expanded bronze criteria because specialty Rx is offered at 50% coinsurance with no deductible. No test on primary care or specialist visit is necessary.

Question 13. If the risk adjustment results released on June 28, 2019 are inconsistent with your projected assumptions, you may modify the risk adjustment transfer amount in Table 5. If such a modification is made, revise all the documents and exhibits impacted and the PA Actuarial Memorandum to discuss this change. This change must be made with your responses due by July 12, 2019.

Answer 13 With this submission, we have updated all exhibits and memos to reflect actual 2018 risk adjustment results released on June 28, 2019. Also, with this update, we are updating our risk adjustment estimate from \$110.00 PMPM to \$107.44 PMPM. The updated risk adjustment calculation is found in

Ind_19-41_Initial_CAAC_PPO_RACalc201905_Supporting_CONF_20190712.xlsx.

Question 14. In response to the Department's RADV survey, issuers indicated that they did not include an adjustment in the initial submission, as there was no supportable reason for a RADV adjustment in the 2020 rate submission. Therefore, the Department has determined that there should be no RADV adjustments in the 2020 rate filings; please modify the filing accordingly, if necessary.

Answer 14. CBC has not included the impact of RADV and therefore no modification is necessary.
