**RE: Keystone Health Plan East
Individual HMO Rate Filing effective 1/1/2020
INAC-131927121**

Dear Ms. Gray:

Attached is the 2020 annual rate filing for HMO plans of Keystone Health Plan East (KHPE) in the Individual (non-group) marketplace in the Commonwealth of Pennsylvania. Rates for new and renewing plans are being filed and satisfy market reform requirements of the Affordable Care Act (ACA).

This rate filing includes rates for these plans and specifies compliance with rating requirements of the ACA. The enclosed is for rating periods effective from January 1, 2020 through December 31, 2020.

Per the guidance provided in the 2020 ACA-Compliant Health Insurance Rate Filing Guidance provided by the Pennsylvania Insurance Department, we applied a morbidity factor of 1.06 in consideration of changes to the individual mandate penalties. We also applied a factor of 1.20 for the impact of non-payment of CSR costs per the guidance.

The proposed rates represent a 9.9% increase over the previously approved 2019 rates.

Information for the Pennsylvania Bulletin:

Rate Change Summary

Keystone Health Plan East – Individual Plans

Rate request filing ID INAC-131927121 - This document is prepared by the insurance company submitting the rate filing as a consumer tool to help explain the rate filing. It is not intended to describe or include all factors or information considered in the review process. For more information, see the filing at <http://www.insurance.pa.gov/Consumers/ACARelatedFilings/>

Overview

Initial requested average rate change:	5.4% ¹
Revised requested average rate change:	N/A ¹
Range of requested rate change:	4.0% to 6.1%
Effective date:	January 1, 2020
People impacted:	141,079
Available in:	Area 8

Key information

Jan. 2018-Dec. 2018 financial experience

Premiums	\$1,079,731,654
Claims	\$709,768,606
Administrative expenses	\$128,518,715
Taxes & fees	\$103,709,776
Company made (after taxes)	\$137,734,557

How it plans to spend your premium

This is how the insurance company plans to spend the premium it collects in 2020:

Claims:	79%
Administrative:	14%
Taxes & fees:	5%
Profit:	2%

The company expects its annual medical costs to increase **4.1%**.

Explanation of requested rate change

Keystone Health Plan East ("KHPE") is revising premium rates for the Pennsylvania Consumer ACA compliant products, effective from January 1, 2020.

About 141,000 members will be affected.

Changes in Taxes and Fees:

The Federal government suspended the Health Insurance Providers Fee for premiums due in 2019, but will be re-implementing it for premiums due in 2020. This adds 3.4% to 2020 premium rates.

¹ Note that insurers will have the opportunity to revise their rate change request in July, after they are scheduled to receive updated information about the impact of a federal program called risk adjustment. This document will be updated accordingly at that time.

Changes in Medical Service Costs:

Premium rates for health care insurance are increasing as the cost of health care service rise. Health care service costs increase as health care providers increase their fees, members use more health care services and supplies, and the types of health care services and supplies change, among other factors.

Financial Experience of the Product:

KHPE is required by federal law to pay out a minimum of 80% percent of premium dollars for medical claims—this is referred to as the minimum Medical Loss Ratio (MLR). The rate action proposed in this filing is expected to achieve a Medical Loss Ratio of greater than 80% using the state's estimates for individual mandate and CSRs not being funded.

Changes in Benefits:

Some plan benefits are mandated by federal and state law. Benefit changes for some plans were also made. All changes in benefits are in compliance with the uniform modifications rules stipulated by the Federal government.

Administrative Costs:

In addition, the Affordable Care Act (ACA) imposes taxes and other levies.

PENNSYLVANIA ACTUARIAL MEMORANDUM

PURPOSES

This Actuarial Memorandum is provided along with the Unified Rate Review Template (URRT) and PA Actuarial Memorandum Rate Exhibits to provide certain information to support the gross premium for the single risk pool for individual market health care insurance underwritten by Keystone Health Plan East in the Commonwealth of Pennsylvania. It is provided as a component of a state rate filing. This submission may not be appropriate for other purposes.

1. BASIC INFORMATION AND DATA

A. COMPANY INFORMATION

Company Legal Name:	Keystone Health Plan East ("KHPE")
State:	Pennsylvania
NAIC #:	95056
Market:	Individual
Marketplace:	On and Off Exchange
Effective Date(s):	1/1/2020 – 12/31/2020
Average Rate Change:	5.4%
Range of Rate Changes:	4.0% to 6.1%
Products:	HMO
Rating Areas:	Rating Area 8
Metal Levels:	Platinum, Gold, Silver, Bronze
Current Members:	141,079
Current Policyholders:	95,072
Number of 2020 Plans:	17
HIOS Issuer ID (5-digit):	33871

Worksheet 1 of the accompanying URRT contains experience period data and development of the projected Single Risk Pool Gross Premium Average Rate PMPM for the individual market for KHPE. Worksheet 2 contains experience period data and projections by product for the single risk pool for the same entities. This memorandum pertains only to plans denoted in Worksheet 2 by Plan IDs starting with the sequence 33871.

B. RATE HISTORY AND PROPOSED VARIATIONS IN RATE CHANGES

January 1, 2015	14.90%	INAC- 129626130
January 1, 2016	1.91%	INAC- 129936718
January 1, 2017	27.97%	INAC- 130539671
January 1, 2018	21.70%	INAC- 131145975
January 1, 2019	-1.70%	INAC- 131476931

The historical rate changes varied by metallic tier based on plan benefits as illustrated via the Pricing AV.

Proposed rate changes may vary by metallic tier and plan based on plan benefit changes.

C. AVERAGE RATE CHANGE

The average proposed rate change shown in Cell AC15 of Table 10 is 5.4%. The changes to the single risk pool gross premium average rate per member per month (PMPM) from calendar year 2018 to calendar year 2020 are incorporated into the pricing and reflected in the Unified Rate Review Template.

The change in 21-year-old Non-Tobacco Premium PMPM calculated in Table 11, Cell AN13 is 5.4%.

D. MEMBERSHIP COUNT

Table 1 illustrates the Experience Period member-months, Current Period members as of February 1, 2019, and Projected Rating Period Member-months by ages.

E. BENEFIT CHANGES

Benefit changes were made to the following plans to assure compliance with Actuarial Value Requirements, including differences that resulted from changes to the AV Calculator. The basis for pricing changes was our internal pricing model.

F. EXPERIENCE PERIOD CLAIMS AND PREMIUMS

Table 2 illustrates the experience period claims and premiums using calendar year data. The data is consistent with the data reported in Section 1 of Worksheet I of the URRT.

Experience period premium, claims, and member months are obtained from the company's internal data warehouse. The claims data is collected for incurred dates from January through December 2018 and paid through February 2019. Earned premiums and member months are for January through December 2018. The data are for all direct-written individual business of KHPE in the Commonwealth of Pennsylvania, including out-of-network claims written by KHPE but paid by QCC for POS plans. No private reinsurance was applicable.

The Non-EHB benefits portion of Allowed Claims is shown separately in cell H36 of Table 2. Capitation is uniform by age for the experience period. Net pharmacy rebates are illustrated in cell I36 of Table 2.

Projected Risk Adjustment PMPM

Projected Risk Adjustment is accounted for in Projected Incurred Claims before ACA Reinsurance and Risk Adjustment to reflect anticipated risk adjustment transfer amounts for the projection period. The amount reflects the projected morbidity for the single risk pool for IBCFOC in the projection period.

The estimated risk adjustment revenue for all of the plans in the risk pool is developed using the following methodology. We recognize that the HHS payment transfer formula implies that the projected incurred claims based solely on the experience period single risk pool claims need to be adjusted by the ratio of the current statewide market's risk relative to allowable rating factor (ARF) for age compared to the single risk pool's risk relative to ARF presented during the experience period. This adjustment, together with the assumed future changes in population risk morbidity, results in the issuer's pricing being consistent with the anticipated morbidity level of the future statewide market.

The anticipated risk adjustment transfer revenue is allocated proportionally based on plan premium. The Projected Risk Adjustment is subtracted from Projected Incurred Claims before ACA Risk Adjustment to reflect anticipated receipt of risk adjustment transfer amounts for the projection period.

When the projected risk adjustment amounts for KHPE and Independence Blue Cross (QCC) are combined, the result is consistent with the projection made in our submission. We also considered preliminary 2018 risk transfer results.

In the URRT v5.0, it is necessary to divide Risk Adjustment by the Paid to Allowed factor when it is used in calculations based on Allowed Claims to produce calculations that are consistent with the Actuarial Memo Rate Exhibit.

G. CREDIBILITY OF DATA

The experience period data is considered 100% credible.

H. TREND IDENTIFICATION

Table 3 identifies the proposed annual medical and prescription drug allowed claims cost and utilization trends. These data match the data illustrated in Section 2 of Worksheet I of the URRT. Additional discussion is provided in Section I, Historical Experience.

We populated the URRT with the Total Annual Trend calculated in cell C52 of Table 3. The URRT requires that factors are rounded to four decimal places which results in some small differences.

I. HISTORICAL EXPERIENCE

Table 4 illustrates historical experience from 2015 through 2018 for the product line.

a. Annualized Cost Trend

Annual cost trend reflects changes in costs of medical treatment due to medical inflation and changes in the distribution of services across network providers. The trend value is developed by reviewing historical medical costs for the single risk pool and adjusting them for anticipated future provider contracting reimbursement levels. The data is normalized for changes in age, benefit changes during the experience period, changes to provider contracts, and prescription drug formulary, and new drugs brought to market.

b. Annualized Utilization Trend

Annual utilization trend reflects the change in the number of units per 1,000 members for a fixed level of illness burden and includes changes due to the mix and intensity of services provided and changes related to shifts in product mix. It also includes effects of selection, if any, since this cannot be reflected in the relative cost of the various products and plans offered.

J. TERMINATED PLANS

No plans are being terminated during 2020.

2. RATE DEVELOPMENT AND CHANGE

A. DEVELOPMENT OF PROJECTED INDEX RATE, MARKET-ADJUSTED INDEX RATE, & TOTAL ALLOWED CLAIMS

Table 5 illustrates the development of the Projected Index Rate and Market-Adjusted Index Rate beginning with the Experience Period Index Rate. Exhibit A provides additional information about the adjustment factors.

Changes in Population Risk Morbidity

Experience period allowed claims are adjusted to account for differences in the average morbidity of the single risk pool population underlying the experience and the anticipated population in the projection period. This adjustment reflects changes in the individual market-wide morbidity.

Changes in Other Factors

Experience period allowed claims are adjusted to account for differences in the single risk pool population underlying the experience and the anticipated population in the projection period pertaining to several factors not due to changes in morbidity or the costs and utilization of medical care. This adjustment reflects: additional benefits required to be covered as essential health benefits; recently mandated benefits required by state law that are not reflected in the experience period data; benefits in

the experience that are removed for the projection period; anticipated changes in the average utilization of services due to differences in average cost sharing requirements during the experience period and average cost sharing requirements in the projection period; changes in demographic characteristics of the single risk pool experience period population and the projection period population (including age, gender, region, and tobacco use); changes in the provider network (adding or removing a provider system or introducing a limited network option); and anticipated changes in pharmacy rebates.

Table 5 of the Actuarial Memorandum Rate Exhibit shows the components used in calculating change in other. The calculations of the components are based on the changes in values shown in Table 7.

CSR payments are funded through premiums in this filing. The additional cost to provide the CSRs is recognized in Column P of Table 10 of the Actuarial Memorandum Rate Exhibit. In URRT Part I, the cost is reflected in the Paid to Allowed factor. The Paid to Allowed factor in the URRT Part 1 is equal to the Paid to Allowed factor in Table 5 multiplied by the value in cell P15 of Table 10 of the Actuarial Memorandum Rate Exhibit.

B. RETENTION ITEMS

Table 6 illustrates the retention items, expressed as percentages of premium. Consistent with conversations with our State regulator, no Pricing load was applied for the Managed Care Assessment levied pursuant to Article VIII-I of the Pennsylvania Code, as it will be separately reimbursed. Federal Income Tax is calculated by applying the tax rate to the sum of the HIF plus Profit/Contingency.

Administrative Expenses		13.32%
General and Claims	11.12%	
Agent/Broker Fees and Commissions	1.40%	
Quality Improvement Initiatives	0.80%	
Taxes and Fees		3.87%
RA User Fee	0.03%	
PA Premium Tax	0.00%	
Federal Income Tax	1.14%	
Health Insurance Providers Fee	2.70%	
Profit/Contingency		2.00%
Total Retention		19.19%

C. NORMALIZED MARKET-ADJUSTED PROJECTED ALLOWED TOTAL CLAIMS

Table 7 compares the normalization factors used in this filing to those used in the 2019 filing. The changes in the factors reflect small differences from the projected populations in 2019 and 2020.

D. COMPONENTS OF RATE CHANGE

Table 8 illustrates the components of rate change, based on inputs from other sections of the Rate Exhibits. The results in Row H are similar to the values in Row A of Table 8.

Data in Table 9 is consistent with the 2019 and 2020 URRT with the exceptions of Risk Adjustment and Reinsurance which were revised to project company-specific values.

3. PLAN RATE DEVELOPMENT

Table 10 is populated with plan information consistent with entries in the 2020 URRT. Plan mappings, where applicable, are illustrated in Column F of Table 10.

Attached to this actuarial memorandum are exhibits providing actuarial certifications for the use of alternate methods of calculating the Actuarial Value, where applicable, as well as required support for the calculations.

The factor “AV and Cost Sharing Design of Plan” in Worksheet 2 of the URRT is the product of the Pricing AV, the Non-Funding of CSR Adjustment, and the Benefit Richness Factors from the Actuarial Memo Rate Exhibit. Again, please note that the URRT requires factors to be rounded to four decimal places, resulting in small differences.

4. PLAN PREMIUM DEVELOPMENT FOR 21-YEAR OLD NON-TOBACCO USER

Table 11 is populated from other sections of the Rate Exhibits, along with the population by age and rating area for the Projection Period.

5. PLAN FACTORS

Tables 12, 13, and 14 illustrate the factors used in pricing for age, tobacco, geographic rating area, and network. The tobacco factors match the previously approved tobacco factors from the 2019 filing.

6. ACTUARIAL CERTIFICATION

I, [REDACTED], am Director & Actuary of Commercial Markets for the Independence Blue Cross Family of Companies. I am a member of the Society of Actuaries and the American Academy of Actuaries with the education and experience necessary to perform the work necessary and meet the Qualification Standards of the American Academy of Actuaries to render the qualified actuarial opinion contained herein. The developed rates and memorandum have been prepared in conformity with appropriate Actuarial Standards of Practice and the Academy’s Code of Professional Conduct.

The Part I Unified Rate Review Template does not demonstrate the process used by the issuer to develop the premium rates and allowable rating factors. Rather, it represents information required by

Federal regulation to be provided in support of the review of gross premium rate increases, for certification of qualified health plans for Federally facilitated exchanges, and for certification that the index rate is developed in accordance with Federal regulation and used consistently and only adjusted by the allowable modifiers.

I hereby certify that, to the best of my knowledge and judgment, the following:

- The projected index rate is:
 - In compliance with all applicable State and Federal Statutes and Regulations (45 CFR 156.08(d)(1) and 147.106);
 - Developed in compliance with applicable Actuarial Standards of Practice;
 - Reasonable in relation to the benefits provided and the population anticipated to be covered; and
 - Neither excessive nor deficient.
- The index rate and only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) were used to generate plan level rates.
- The percent of total premium that represents essential health benefits included in Worksheet 2, Sections III and IV were calculated in accordance with actuarial standards of practice.
- The AV Calculator was used to determine the AV Metal Values illustrated in Worksheet 2 of the Part I Unified Rate Review Template for all plans, unless an alternate methodology was required. If an alternate methodology was used to calculate the AV Metal Value for at least one plan offered, a copy of the actuarial certification required by 45 CFR Part 156, §156.135 will be included.
- All factor, benefit, and other changes from the prior approved filing have been disclosed in the actuarial memorandum.
- New plans cannot be considered modifications of existing plans under the uniform modification standards in 45 CFR 147.106.
- The information presented in the PA Actuarial Memorandum and PA Actuarial Memorandum Rate Exhibits is consistent with the information presented in the 2020 Rate Filing Justification.

Rating Area Data Collection

Rating Area	Rating Factor
Rating Area 8	1.0000

URRT Part II – Consumer Friendly Justification

Scope and Range of the Rate Increase:

Keystone Health Plan East ("KHPE") is revising premium rates for the Pennsylvania Consumer ACA compliant products, effective from January 1, 2020. The proposed revisions to each plan are shown on the second page of this exhibit.

About 141,000 members will be affected.

Financial Experience of the Product:

KHPE is required by federal law to pay out a minimum of 80% percent of premium dollars for medical claims—this is referred to as the minimum Medical Loss Ratio (MLR). The rate action proposed in this filing is expected to achieve a Medical Loss Ratio of greater than 80% using the state's estimates for individual mandate and CSRs not being funded.

Changes in Taxes and Fees:

The Federal government suspended the Health Insurance Providers Fee for premiums due in 2019, but will be re-implementing it for premiums due in 2020. This adds 3.4% to 2020 premium rates.

Changes in Medical Service Costs:

Premium rates for health care insurance are increasing as the cost of health care service rise. Health care service costs increase as health care providers increase their fees, members use more health care services and supplies, and the types of health care services and supplies change, among other factors.

We are projecting that claims will increase by 4.1% in 2020. More than half of the change in health care service costs is driven by changes to health care provider fees.

Changes in Benefits:

Some plan benefits are mandated by federal and state law. Benefit changes for some plans were also made. All changes in benefits are in compliance with the uniform modifications rules stipulated by the Federal government.

Administrative Costs:

The premium rates presented in this filing include a 2% contribution to reserves. Furthermore, the Affordable Care Act (ACA) imposes taxes and other levies.

URRT Part II – Consumer Friendly Justification

GENERAL OVERVIEW

PURPOSES

This Actuarial Memorandum is provided along with the Unified Rate Review Template (URRT) to provide certain information to support the gross premium for the single risk pool for individual market health care insurance underwritten by Keystone Health Plan East in the Commonwealth of Pennsylvania. It is provided as a component of an application for certification as a Qualified Health Plan and a state rate filing. This submission may not be appropriate for other purposes.

GENERAL INFORMATION

COMPANY IDENTIFYING INFORMATION

Company Legal Name: Keystone Health Plan East ("KHPE")

State: Pennsylvania

HIOS Issuer ID (5-digit): 33871

Market: Individual

Effective Date(s): 1/1/2020

Worksheet 1 of the accompanying URRT contains experience period data and development of the projected Single Risk Pool Gross Premium Average Rate PMPM for the individual market for KHPE. Worksheet 2 contains experience period data and projections by product for the single risk pool for the same entities.

COMPANY CONTACT INFORMATION

Primary Contact Name:

Primary Contact Telephone Number:

Primary Contact Email Address:

PROPOSED RATE INCREASE

The changes to the single risk pool gross premium average rate per member per month (PMPM) from calendar year 2018 to calendar year 2020 were incorporated into the pricing and reflected in the Unified Rate Review Template. The changes are driven by factors including: changes in market-wide population risk morbidity and covered services, increasing unit costs for medical services, increasing utilization of medical services, increasing fees and taxes imposed by the federal government, anticipated costs to administer the plan, and anticipated revenue or payments due to market-wide risk adjustment.

The weighted average increase across KHPE plans based on projected membership, inclusive of the impact of benefit and cost sharing changes, is 9.9%. The minimum increase is 8.5% and the maximum increase is 10.6%.

WORKSHEET 1: MARKET EXPERIENCE

SECTION I: EXPERIENCE PERIOD DATA

SINGLE RISK POOL

The single risk pool reflects all covered lives for every individual non-grandfathered product and plan combination for KHPE in the state of Pennsylvania. It is established according to the Single Risk Pool requirements in 45 CFR § 156.80(d).

PAID THROUGH DATE

Experience period premium, claims, and member months are obtained from the company's internal data warehouse. The claims data is collected for incurred dates from January through December 2018 and paid through February 2019. Earned premiums and member months are for January through December 2018. The data are for all direct-written individual business of KHPE in the Commonwealth of Pennsylvania.

PREMIUMS IN EXPERIENCE PERIOD

Earned Premiums in the Experience Period are developed by summing the earned premium reported in the company's internal data warehouse.

ALLOWED AND INCURRED CLAIMS INCURRED DURING THE EXPERIENCE PERIOD

Paid-to-Date and Incurred Claims, and Member Months

Insurer fee-for-service claims expenses and member liabilities for dates of service in January 2018 through December 2018 and paid through February 2019 are sourced from the IBCFOC's internal data warehouse. The claims and member liabilities are completed with incurred but not reported (IBNR) adjustments to develop ultimate incurred insurer fee-for-service claims expenses and member liabilities for the January through December 2018 period. Capitation amounts are also sourced from the internal data warehouse for the January through December 2018 period but they are not adjusted for IBNR.

Allowed Claims

Allowed claims are determined by separately obtaining paid-to-date fee-for-service claims and member cost-sharing amounts, applying claim lag factors to those amounts to estimate ultimate incurred fee-for-service claims and member-sharing amounts and adding them together with capitation amounts.

Allowed claims do not include ineligible claims, payments for services other than medical care provided, recovery payments related to internal large claim pooling mechanisms, or active live reserves.

IBNR Development

Medical fee for service incurred but not reported (IBNR) claims are modeled through the use of standard claim lag methodologies. A range of results is developed, and a provision for adverse deviation is applied. The provision for adverse deviation is dependent on many factors such as stability, size, product mix, etc.

The completion factors are developed annually in the 2Q – 3Q period. We do not believe our IBNR is unusually high or unusually low for incurred 2018 paid through February 2019.

Experience Period Index Rate

The Index Rate of Experience Period is estimated by removing cost and utilization trend from the Index Rate for Projection Period.

SECTION II: PROJECTIONS

BENEFIT CATEGORIES

Experience Period Index Rate PMPM Data is provided in Section II. The data is provided by benefit category using a standardized indicator from the internal data warehouse that assigns each claim line to a category based on the type of provider and the location of the service.

PROJECTION FACTORS

The estimated incurred claims experience on an allowed basis for January 2018 through December 2018 is projected to the future rating period by several factors.

Morbidity Adjustment

Experience period allowed claims are adjusted to account for differences in the average morbidity of the single risk pool population underlying the experience and the anticipated population in the projection period. This adjustment reflects changes in the individual market-wide morbidity.

Demographic Shift

This factor reflects the projected change in the average age, rating area, and tobacco utilization of the single risk pool.

Plan Design Changes

This factor reflects any changes in EHB allowed claims due to plan design changes.

Other Changes

This factor reflects changes in cost related to items other than changes in Morbidity, Demographic Shift, or Plan Design.

Trend Factors

a. Annualized Cost Trend

Annual cost trend reflects changes in costs of medical treatment due to medical inflation and changes in the distribution of services across network providers. The trend value is developed by reviewing historical medical costs for the single risk pool and adjusting them for anticipated future provider contracting reimbursement levels. The data is normalized for changes in age, benefit changes during the experience period, changes to provider contracts, and prescription drug formulary, and new drugs brought to market.

b. Annualized Utilization Trend

Annual utilization trend reflects the change in the number of units per 1,000 members for a fixed level of illness burden and includes changes due to the mix and intensity of services provided and changes related to shifts in product mix. It also includes effects of selection, if any, since this cannot be reflected in the relative cost of the various products and plans offered.

CREDIBILITY MANUAL RATE DEVELOPMENT

The experience period claims for the single risk pool are determined to be fully credible; therefore no credibility adjustment is required.

RISK ADJUSTMENT AND REINSURANCE

Projected Risk Adjustment PMPM

Projected Risk Adjustment is accounted for in Projected Incurred Claims before ACA Reinsurance and Risk Adjustment to reflect anticipated risk adjustment transfer amounts for the projection period. The amount reflects the projected morbidity for the single risk pool.

The estimated risk adjustment revenue for all of the plans in the risk pool is developed using the following methodology. We recognize that the HHS payment transfer formula implies that the projected incurred claims based solely on the experience period single risk pool claims need to be adjusted by the ratio of the current statewide market's risk relative to allowable rating factor (ARF) for age compared to the single risk pool's risk relative to ARF presented during the experience period. This adjustment, together with the assumed future changes in population risk morbidity, results in the issuer's pricing being consistent with the anticipated morbidity level of the future statewide market.

The anticipated risk adjustment transfer revenue is allocated proportionally based on plan premium. The Projected Risk Adjustment is subtracted from Projected Incurred Claims before ACA Risk Adjustment to reflect anticipated receipt of risk adjustment transfer amounts for the projection period.

When the projected risk adjustment amounts for KHPE and QCC are combined, the result is consistent with the projection made in our submission. We also considered preliminary 2018 risk transfer results.

Projected ACA Reinsurance Recoveries Net of Reinsurance Premium (Individual Market Only)

With the expiration of the reinsurance program at the end of the 2016 benefit year, there are no projected reinsurance recoveries or reinsurance premium assumed in the rates.

MARKET ADJUSTED INDEX RATE

The template calculates a MAIR by subtracting the amounts entered for reinsurance and risk adjustment and dividing by 1 minus the exchange user fee percentage. The MAIR calculation flows into Worksheet 2.

The Market Adjusted Index rate is calculated as the Index Rate adjusted for all allowable market-wide modifiers defined in the market rating rules: federal reinsurance program adjustment, risk adjustment and exchange user fees. The Market Adjusted Index Rate reflects the average demographic characteristics of the single risk pool.

WORKSHEET 2: PRODUCT-PLAN DATA COLLECTION

SECTION I: GENERAL PRODUCT AND PLAN INFORMATION

All products and plans included in the single risk pool are shown in Worksheet 2.

AV METAL VALUES

The AV Metal Values included in Worksheet 2 of the URRT were valued using the AV Calculator, where possible, otherwise the AV Metal Values were developed under an alternate methodology. Actuarial certifications required by 45 CFR Part 156, §156.135 are provided in a separate document.

SECTION II: EXPERIENCE PERIOD AND CURRENT PLAN LEVEL INFORMATION

Experience Period data is shown for each plan included in the single risk pool.

SECTION III: PLAN ADJUSTMENT FACTORS

The MAIR is adjusted for each plan based on its plan design, provider network, and non-EHBs. Administrative costs are added to calculate the Plan Adjusted Index Rate. The Plan Adjusted Index Rate is multiplied by the Age Calibration Factor, Geographic Calibration Factor, and Tobacco Calibration Factor to calculate the Calibrated Plan Adjusted Index Rate.

PLAN ADJUSTED INDEX RATE

The Plan Adjusted Index Rate is calculated as the issuer Market Adjusted Index Rate adjusted for all allowable plan level modifiers defined in the market rating rule. These include actuarial value and cost sharing adjustment, provider network, delivery system and utilization management adjustment, adjustment for benefits in addition to the EHBs, impact of specific eligibility categories for the catastrophic plan and administrative costs.

NON-BENEFIT EXPENSES AND PROFIT & RISK

Administrative Expense Load

An Administrative Expense Load is applied to Projected Incurred Claims to reflect expenses related to quality improvement and fraud detection/recovery and other expenses of operating a business, broker commissions, and premium payment processing fees.

Profit & Risk Load/Contribution to Surplus

A Profit & Risk Load/Contribution to Surplus for the single risk pool is applied to Projected Incurred Claims for the projection period, if applicable.

Taxes and Fees

A Taxes & Fees load is applied to Projected Incurred Claims to pass through fees and taxes levied by the federal and state governments.

CALIBRATION

The plan adjusted index rate is projected for all products using the same anticipated age distribution and the mandated age curve. Therefore the consumer adjusted premium rate is the plan adjusted index rate divided by the average age, geographic and tobacco factors for the expected distribution. The average age of the combined individual risk pool population is 41.

The Average Age factor is the reciprocal of the weighted average age factor based on the projected membership. The Tobacco Factor is calculated as the reciprocal of the projected average factor for tobacco users multiplied by the projected tobacco use prevalence.

There is only one geographic rating area for this filing. The geographic rating area factor for this filing is 1.0.

Small differences result between the Calibrated Plan Adjusted Index rates and the Age 21 non-tobacco rates in the Rate Template due to rounding restrictions required in the URRT Part 1.

When rounded to the nearest dollar, the Calibrated Plan Adjusted Index Rates match the Age 21 non-tobacco rates in the Rate Template as required in the DIT.

MEMBERSHIP PROJECTIONS

Enrollment is projected based on current and anticipated enrollment by plan. Items impacting these projections include changes in the size of the market due to guarantee issue requirements and the individual mandate changes. The enrollment is our February 2019 enrollment.

LOSS RATIO

The loss ratio calculated in Section IV is generated within the template and is not based on the MLR formula. The projected loss ratio for the single risk pool is estimated to exceed 80% reflecting premium adjustments permitted by the federal MLR calculation.

INDEX RATE

The Index Rate is defined as the EHB portion of projected allowed claims divided by all projected single risk pool lives. The Index Rate is the same value for all non-grandfathered plans for KHPE Individual Plans in Pennsylvania. The Index Rate reflects the twelve month projection for calendar year 2020. It has been developed following the specifications of 45 CFR § 156.80(d)(1).

TERMINATED PLANS

No plans are being terminated during 2020.

WORKSHEET 3: RATING AREAS

There are nine rating areas in Pennsylvania. These plans are offered only in Rating Area 8, which consists of Bucks, Chester, Delaware, Montgomery, and Philadelphia counties.

ACTUARIAL CERTIFICATION

I, [REDACTED], am Director & Actuary of Commercial Markets for the Independence Blue Cross Family of Companies. I am a member of the Society of Actuaries and the American Academy of Actuaries in good standing with the education and experience necessary to perform the work necessary and meet the Qualification Standards of the American Academy of Actuaries to render the qualified actuarial opinion contained herein. The developed rates and memorandum have been prepared in conformity with appropriate Actuarial Standards of Practice and the Academy's Code of Professional Conduct.

The Part I Unified Rate Review Template does not demonstrate the process used by the issuer to develop the premium rates and allowable rating factors. Rather, it represents information required by Federal regulation to be provided in support of the review of rate increases, for certification of Qualified Health Plans for Federally-facilitated Exchanges, and for certification that the Index Rate is developed in accordance with federal regulation and used consistently and only adjusted by the allowable modifiers.

I hereby certify that, to the best of my knowledge and judgment, the following:

- The projected index rate is:
 - In compliance with all applicable State and Federal Statutes and Regulations (45 CFR 156.80 and 147.102);
 - Developed in compliance with applicable Actuarial Standards of Practice;
 - Reasonable in relation to the benefits provided and the population anticipated to be covered; and
 - Neither excessive nor deficient.
- The index rate and only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) were used to generate plan level rates.
- Geographic rating factors reflect only differences in the costs of delivery of and do not include differences for population morbidity by geographic area.
- The percent of total premium that represents EHB included in the Part I Unified Rate Review Template, Worksheet 2, Sections III and IV, was calculated in accordance with actuarial standards of practice.
- The AV Calculator was used to determine the AV Metal Values shown in Worksheet 2 of the Part I Unified Rate Review Template for all plans, unless an alternate methodology was required. When an alternate methodology was used to calculate the AV Metal Value a copy of the actuarial certification required by 45 CFR Part 156, §156.135 was included.

HIOS Issuer ID: 33871

HIOS Product IDs: 33871PA004, 33871PA012

This single PDF file contains two separate actuarial certifications for the unique plan designs under Issuer ID 33871. Please refer to all of the pages contained herein.

Unique Plan Design Supporting Documentation and Justification

ACTUARIAL MEMORANDUM

HIOS Issuer ID: 33871

HIOS Product IDs: 33871PA004, 33871PA012

Applicable HIOS Plan IDs (Standard Component): 33871PA0040002, 33871PA0120002, 33871PA0120004, 33871PA0040005, 33871PA0120005, 33871PA0040006, 33871PA0120006, 33871PA0120007, 33871PA0120008, 33871PA0040008, 33871PA0040009, 33871PA0040010, 33871PA0040011, 33871PA0040012.

Purpose of document:

The purpose of this document is to provide CMS with a justification of the methods used in calculating the actuarial value for unique plan designs offered in the individual or small group market for the plan year beginning 1/1/2020. As prescribed by law, the AV calculation was based on the AV calculator to the full extent possible. The AV is meant to represent the average percent of costs paid by the insurer for a standard population and may vary from actual member experience. The resulting AV was based on prescribed methodology and, therefore, may not reasonably reflect the actuary's estimate of the portion of allowed costs covered by the health insurance plan. The AV was determined based on the plan's benefits and coverage data, the standard population, and utilization and continuance tables published by HHS for purposes of the valuation of AV. This actuarial analysis is not appropriate for any other purposes.

Reasons the plan design is unique (benefits that are not compatible with the parameters of the AV calculator and the materiality of those benefits):

The cost sharing of inpatient hospital services for these plans is a combination of copays for facility claims and coinsurance for professional claims. Inpatient hospital services account for about 21% of allowed costs in the AV calculation.

The following plans have three in-network tiers: 33871PA0040005, 33871PA0120005, 33871PA0040006, 33871PA0120006, 33871PA0120007, 33871PA0120008, 33871PA0040008, 33871PA0040009, 33871PA0040010, 33871PA0040011, and 33871PA0040012.

33871PA0040005 and 33871PA0120005 have expected utilization of 37% in the third tier. 33871PA0040006, 33871PA0120006, 33871PA0120007, 33871PA0120008, 33871PA0040008, 33871PA0040009, 33871PA0040010, 33871PA0040011, and 33871PA0040012 have expected utilization of 41% in the third tier.

Acceptable alternate method used per 156.135(b)(2) or 156.135(b)(3):

Method 156.135(b)(2) was used for the inpatient hospital cost sharing.

Method 156.135(b)(3) was used to accommodate the three-tier design.

Confirmation that only in-network cost sharing, including multitier networks, was considered:

I confirm that only in-network cost sharing was considered.

Description of the standardized plan population data used:

We used our commercial PPO and HMO data incurred between July 2017 and June 2018.

If the method described in 156.135(b)(2) was used, a description of how the benefits were modified to fit the parameters of the AV calculator:

Combination of Copays and Coinsurance for IP Hospital

The copays for inpatient hospital facility claims were combined with the coinsurance on professional claims to calculate equivalent copays for inpatient claims.

First, we took the allowed PMPY inpatient costs and divided that by the utilization by admit PMPY to calculate the average cost per admit. We also took the utilization by day PMPY and divided that by the utilization by admit PMPY to calculate the average length of stay.

The average cost per admit was divided by the average length of stay to calculate the average cost per day. Based on our data, we assumed that 84% of the cost was from facility claims and the remaining 16% was from professional claims.

The professional coinsurance was multiplied by the professional portion of the daily inpatient cost to calculate equivalent daily copay for that piece. Because there is a 5-day maximum on our plans' inpatient copays, an effective copay factor was calculated by dividing the PMPY cost sharing from a \$100 per day inpatient copay with a 5-day maximum by the PMPY cost sharing from a \$100 per day inpatient copay without any maximum. The equivalent daily professional copay amount was then divided by this factor in order to determine the final professional copay reflecting a 5-day maximum.

The final professional copay was then added onto the facility copay in order to determine the equivalent overall IP hospital copay amount. The exhibit below shows this calculation.

If the method described in 156.135(b)(3) was used, a description of the data and method used to develop the adjustments:

Using the AV calculator and the methods described above, we calculated the AV for each tier in each plan, as follows. Based on actual tier utilization experience incurred between July 2017 and June 2018, we projected expected utilization by tier for the plans. The final AV for the plan was then calculated by taking the weighted average of the tier AVs using the utilization by tier. The following exhibits details this calculation.

Utilization	Tier 1	Tier 2	Tier 3	Total
33871PA0040005, 33871PA0120005	49%	14%	37%	100%

Unique Plan Design Supporting Documentation and Justification

ACTUARIAL MEMORANDUM

HIOS Issuer ID: 33871

HIOS Product IDs: 33871PA012

Applicable HIOS Plan IDs (Standard Component): 33871PA0120003

Purpose of document:

The purpose of this document is to provide CMS with a justification of the methods used in calculating the actuarial value for unique plan designs offered in the individual or small group market for the plan year beginning 1/1/2020. As prescribed by law, the AV calculation was based on the AV calculator to the full extent possible. The AV is meant to represent the average percent of costs paid by the insurer for a standard population and may vary from actual member experience. The resulting AV was based on prescribed methodology and, therefore, may not reasonably reflect the actuary's estimate of the portion of allowed costs covered by the health insurance plan. The AV was determined based on the plan's benefits and coverage data, the standard population, and utilization and continuance tables published by HHS for purposes of the valuation of AV. This actuarial analysis is not appropriate for any other purposes.

Reasons the plan design is unique (benefits that are not compatible with the parameters of the AV calculator and the materiality of those benefits):

The cost sharing for outpatient facility fee varies by site of service. Services rendered at the office or a free-standing facility have 70% coinsurance, and services rendered by a hospital have 50% coinsurance. Outpatient facility fee accounts for roughly 12% of allowed costs in the AV calculation.

Acceptable alternate method used per 156.135(b)(2) or 156.135(b)(3):

Method 156.135(b)(2) was used for the outpatient facility site of service cost sharing.

Confirmation that only in-network cost sharing, including multitier networks, was considered:

I confirm that only in-network cost sharing was considered.

Description of the standardized plan population data used:

For the freestanding and hospital utilization data for outpatient facility, we used our commercial PPO and HMO data incurred between July 2017 and June 2018.

If the method described in 156.135(b)(2) was used, a description of how the benefits were modified to fit the parameters of the AV calculator:

For the outpatient facility site of service cost sharing, our recent data indicated that 80% of outpatient facility claims came from the hospital setting.

The cost sharing entered the AV calculator is a weighted average of the 50% coinsurance at the hospital and 70% coinsurance at an ambulatory surgery center. The final coinsurance entered was 54.00%.

If the method described in 156.135(b)(3) was used, a description of the data and method used to develop the adjustments:

Not applicable.

Certification Language:

The development of the actuarial value is based on one of the acceptable alternative methods outlined in 156.135(b)(2) or 156.135(b)(3) for those benefits that deviate substantially from the parameters of the AV Calculator and have a material impact on the AV.

The analysis was

- (i) conducted by a member of the American Academy of Actuaries; and
- (ii) performed in accordance with generally accepted actuarial principles and methodologies.

I am an employee of the issuer, I meet the *Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States* promulgated by the American Academy of Actuaries, and I have the education and experience necessary to perform this work. All AVs herein were determined in accordance with the ASOPs established by the Actuarial Standards Board and comply with applicable laws and regulations; furthermore, all metal levels herein were appropriately assigned based on applicable law.

AV screenshots redacted.

The 1.06 factor is the uniform adjustment stated in the 2020 Filing Guidance from the change to the individual mandate.

The change in demographics was calculated considering changes to age, geography, and tobacco use.

The change in the average age was measured by comparing the average age factor calculated in this filing, based on February 2019 enrollments, to the average age factor calculated for the prior filing.

	2019 Filing	2020 Filing	Change
Age Factor	1.672	1.682	1.006
Change from geography: No change			1.000
Change from tobacco use: No change			1.000
Total change			1.006

The Benefits factor is 1 due to minimal projected membership movement among plans.

No changes for Other were assumed for this filing.

The network factors used in Table 10 are based on the network differentials from the prior filing.

The network factor used for Keystone HMO was 1.100.

The network factor used for Proactive was 1.000.

The factors used in Table 10 recalibrate the values so that the differentials between the factors remains constant, and the composite factor equals 1.000.

Table 10 factors:	HMO	1.090
	Proactive	0.991

Redacted AV Screenshots (pages 9-98 and 102)

- 1. The updated URR instructions requires the quantitative impact of rate increase drivers. Please estimate the impact to the rate increase of each of the drivers described on page 1 of the Part III memorandum.**

The information is shown in Tab #1 of the attached worksheet.

- 2. The updated URR instructions require an explanation of how morbidity was removed from impacting the variations in rate increases. Please provide this explanation and provide a quantitative demonstration of the variation in rate increase by plan.**

We have held our rate increases constant by plan design across the single risk pool except for differences in changes in cost sharing between plan design. In this way the morbidity impact by plan was removed from the rate increases because if the plans had the same benefit changes, they would have received the same rate increase regardless of what their plan specific experience was. Please note that the benefit changes made resulted in reductions to the Pricing AVs.

Please also see our response to question 32 for more details of these calculations.

- 3. Was transitional business included in the experience period?**

KHPE has no transitional business in the Consumer market.

- 4. Please confirm that the experience period premiums on the URRT do not reflect any MLR rebates.**

Confirmed, there are no MLR rebates reflected in the experience period premiums.

- 5. For both the allowed and incurred claims in the experience period, please provide the three components referenced in the Part III memo:**
 - a. The amount of claims that were processed through the claims system;**
 - b. The amount of claims processed outside of the company's claims system; and**
 - c. The best estimate of claims incurred but not paid as of the paid through date.**

This information is shown in Tab #5 of the attached worksheet. It is also found in Table 2 of the AM Exhibit.

- 6. Are trends adjusted due to fluctuation in large claim amounts? If so, please explain how.**

Since we consider this block to be fully credible on its own, no adjustments were made for large claims.

- 7. Was the volume of large claims during the experience period unusually high or low? If so, was any adjustment made to reflect this?**

The volume of large claims was in line with our expectation within the experience period. They were neither unusually high nor unusually low. No adjustment was made for large claims as noted in our response to question 6.

- 8. If adjustments are made for large claim pooling, was the federal risk adjustment program considered?**

No, because no adjustments were made for large claims there was no need to adjust risk adjustment.

9. The projected index rate on the PAAM (\$514.83) does not match the URRT (514.62). Please correct.

As we discussed with our reviewer, since the new URRT rounds factors to 3 decimal places, there will be a difference between the PAAM and the URRT due to this rounding. This was also covered on a CMS Q&A call. The PAAM answer is correct, since the PAAM does not round factors to 3 decimal places. To the extent possible, we reduced the differences.

10. The estimated risk adjustment amount of \$55,241,068 as shown in Table 2 of the PAAM exhibits is not consistent with the \$93,347,829 figure shown for individual KHPE business as shown in the RATEE files PA summary table. Please explain this significant discrepancy.

We had begun our pricing process before PID had sent its email. While the amounts shown are different, this has no impact on pricing and rates because it is a value from the Experience Period only.

11. Please provide substantial quantitative support for the development of the projected risk adjustment, and identify how the relative risk compared to the market was determined.

Information is shown in Tab #11 of the attached worksheet.

12. Regarding the Risk Adjustment Data Validation process (RADV):

a. Please describe any considerations and provide quantitative support for any adjustments made due to the Risk Adjustment Data Validation process (RADV), or confirm that no such adjustments were made.

Confirmed that no adjustment was made for RADV in this filing.

b. As you know, CMS is performing a risk adjustment validation starting with 2017 risk adjustment data. We are considering allowing an estimate of the impact of risk adjustment modifications in rate filings as an adjustment to the projected risk adjustment. Before implementation, we are soliciting feedback from our issuers on the pros and cons of the inclusion of this adjustment. If allowed, all issuers would be required to submit an estimate. The estimate may be \$0. Please provide any feedback that you would like us to consider.

Independence is open to submitting an estimate of the impact of RADV on projected risk adjustments, but we have several concerns:

- Commercial RADV is still a fairly new and evolving process. Carriers do not have sufficient information to accurately estimate the RADV impact.
- Without releasing carriers' proprietary information, it will be difficult to determine if RADV impact is due to a systemic risk score reporting issue or due to one-time bad audit. In the case of latter, carriers should not expect this experience to be reflective of the future.

Our preference remains to not include an adjustment.

13. Please explain why the PA estimate of the 2018 risk adjustment was not used, and confirm that the risk adjustment figure is not adjusted for the risk adjustment user fee.

We confirm that this figure will not be adjusted for the risk adjustment user fee. Our membership mix has changed since 2018, so we are reflecting our expected risk transfer in 2020 which includes the impact of this membership change. Please also see our response to question 11 for the numeric demonstration. We also note that the PA estimate is preliminary and we may revisit our risk adjustment estimates after the release of the actual risk adjustment report.

14. Please provide the development of the exchange user fee and how it was converted to a % of index rate as applied on the URRT.

The Exchange User Fee is calculated as a percentage of on-exchange premium.

We calculated the Exchange User Fee in the AM Exhibits, where it is shown as a PMPM. In building the MAIR, it gets divided by the paid-to-allowed factor.

In the new URRT the carriers are required to enter a factor that is applied to an amount not directly proportional to premium rates; you enter a percentage for Exchange user fee and it gets applied to an allowed claims related amount. We therefore solved for the percentage that needed to be entered to arrive as close as we could to the MAIR from the AM Exhibit. The state AM exhibit is doing the calculation correctly. When compared as PMPM amounts, the numbers are fairly consistent.

15. Please explain the discrepancy in the Market-Adjusted Allowed Claims between Table 5 Cell C42 and URRT Worksheet 2 Cell D76.

We identified that the impact of non-funding of the CSRs was not correctly incorporated into this row for applicable plans. We are working on trying to determine any other factors that caused the discrepancy.

16. The Pricing AV's shown in Table 10 of the PAAM exhibits, which do not include the CSR load or induced demand, are larger than the Metal AV in the URRT for all plans. What is driving these differences?

Please note that the metal AV is to determine compliance with Actuarial Value and is not a Pricing AV. The metal AV is based on the AV calculator which is calibrated to national average costs. The Philadelphia market is significantly more expensive than the national average from a cost of services standpoint. This means that the same deductible or copay is worth significantly less as a percentage of total allowed cost in the Philadelphia market compared to the national average. This leads to higher Pricing AVs for the same metal level. Please also refer to our response for question 17.

17. Please provide quantitative support for the Pricing AV's as shown in Table 10 of the PAAM exhibits, explain how they were developed, and explain how you ensure that the factors do not reflect morbidity differences between the enrolled populations.

The information is shown in Tab #17 of the attached worksheet. The morbidity impact by plan has been removed from the rate increases. Without the benefit changes, the plans would have received the same rate increase regardless of what their plan specific experience was.

18. In support of the figures shown in Table 10, Column L, please complete the worksheet shown on page 15 of the Department's guidance as well as providing the following information related to the worksheet:

- a. Please confirm that the ratio in Column (9) represents the pure induced utilization for each plan.**
- b. Please show quantitatively, including an Excel spreadsheet with formulas, the derivation of the AV and cost sharing factors for each plan. Please note that it is assumed that the AV and cost sharing factor includes the average tobacco factor.**
- c. Please provide any additional justification for induced utilization assumptions in the Company's pricing.**
- d. Please confirm that each plan's induced utilization factor was normalized by an aggregate factor, and that the resulting sum product (against 2/1/2019 membership or the projected membership distribution) produces**
- e. Please quantitatively demonstrate the calculation of the induced calibration factor.**
- f. Please quantitatively show and provide a detailed description of how the induced demand factor shown in Table 7 relates to the induced utilization factors calculated in this exhibit.**

Information is shown in Tab #18.

We confirm that the value represents the factor for each plan. They are equal to the values shown in Table 10 for each plan.

Table 10 demonstrates that when weighted by 2/1/2019 membership that the induced utilization factors composite to 1.000.

It is unclear what is being requested about an induced calibration factor. However, as noted above, the induced utilizations composite to 1.000.

The induced demand factor shown in Table 7 is the composite of the induced demand factors in Table 10 of 1.000. We do not anticipate a change to our single risk pool costs from induced demand in 2020.

19. Regarding Table 6:

- a. We have repurposed row 54 to capture RA User Fees. Please provide the RA User Fee percentage and pmpm amount in cells C54 and D54, and identify where the risk adjustment user fees are currently included in the URRT and in the PAAM. Note the URR instructions specify that these fees are to be included in Taxes & Fees and not with the risk adjustment transfers on the URRT.**

At the direction of the state's reviewer, we revised these cells to produce an RA User Fee of \$0.18 and removed that amount from the Risk Adjustment, resulting in no change to the proposed rates.

- b. Using financial data based on nationwide market share, please provide the quantitative development of the HIT percent and pmpm.**

Insufficient time was provided to produce an answer for this question, so we were unable to respond.

- c. Provide the actual paid HIT fees on a pmpm and percent of premium basis for calendar years 2018 and 2016.**

Insufficient time was provided to produce an answer for this question, so we were unable to respond.

- 20. Please provide the quantitative development of the 2.7% for health insurer fee.**

The health insurer fee was expected to be in the range of 2-3%. We used our estimate of 2.7% in setting the rates.

- 21. Please show the quantitative development of the Age Calibration Factor of 1.682 which appears in Table 10, Cell T4.**

The information is shown in Tab #21 of the attached worksheet.

- 22. Please show the quantitative development of the Tobacco Calibration Factor of 1.013 which appears in Table 10, Cell T6.**

The information is shown in Tab #22 of the attached worksheet.

- 23. Please provide the estimated 2020 federal MLR calculation showing all adjustments.**

The information is shown in Tab #23 of the attached worksheet.

- 24. The Actuarial certification in the Part III Actuarial Memorandum appears to be based on last year's URRT and instructions. For example, it refers to "the percent of total premium that represents essential health benefits included in Worksheet 2, Sections III and IV," which is not part of the current URRT. Please revise the certification consistent with this year's URR instructions.**

We have updated the Actuarial Certification in the Part III Actuarial Memorandum.

- 25. Please provide the requested data in Table 4, Columns J and K of the PAAM exhibits, or explain why this data is not available.**

We did not provide this in our 2019 filing.

- 26. Please support the weights shown in Table 3, Column J, and provide the actual weights by service category generated by the 2018 experience.**

These weights are consistent with the weights used by benefit type in the URRT and they were obtained from our internal data warehouse." Tab #26 converts these to \$ by multiplying the PMPMs in the URRT by MMOS.

- 27. Please show the quantitative development of the Federal Income Tax figure shown in Table 6.**

The information is shown in Tab #27 of the attached worksheet.

- 28. In Table 10, please provide the DOH Approval Date for each network.**

We have added this information to Table 14.

- 29. For the expanded Bronze plans, please demonstrate that the copay is less than or equal to the 50% coinsurance for that category.**

Our average allowed cost per visit for PCP is about \$120. Therefore \$50 PCP copay is less than 50% coinsurance. Specialist copay is set to 2x PCP copay.

- 30. Please provide an exhibit that quantitatively shows a comparison of the actual to projected claim cost pmpms for calendar years 2015-2018, as applicable.**

Insufficient time was provided to produce an answer for this question, so we were unable to respond.

- 31. Please provide an exhibit showing the actual experience for calendar years 2014 – 2018 and the projections for 2019 and 202 for the following categories: Member months, total administrative expenses, total incurred claims, total premium, total actual paid taxes and fees, profit, annual underwriting gain/loss and underwriting gain/loss pmpy. Also show how the financial gains and losses reconcile with the Annual Financial Statements for those periods.**

Insufficient time was provided to produce an answer for this question, so we were unable to respond.

- 32. Please provide an exhibit that shows, by HIOS Plan ID, a summary of benefit and cost sharing changes for 2020 relative to the 2019 design for all plans to be offered in 2020. Include Pricing AV columns for 2019 and 2020. Please show the approved 2019 Pricing AVs for all plans in the 2019 column and the proposed 2020 Pricing AVs in the 2020 column. Also, provide a supporting worksheet that shows the quantitative development of the proposed factors in Table 10, in support of the overall change in benefits factor shown in Table 5.**

This information is shown in Tab #32.

- 33. Please confirm that you have tested to ensure that the PID rate exhibits and the Federal rates template included in this filing and in the binder are all the same.**

We confirmed that this is correct.

KHPE Consumer	2020	2019	Change
Change in Morbidity	1.06	1.06	0.00%
Taxes and Fees	3.84%	0.42%	3.42%
Administrative Costs	13.32%	12.43%	0.89%
Average Age Factor	1.682	1.672	0.64%
Projected Allowed Claims	\$ 482.11	\$503.85	-4.31%
Actual vs. Expected Experience			9.27%

Rate Change **9.9%**

	KHPE Consumer	Allowed Claims	Incurred Claims
a	Claims processed through the claims system	\$ 671,314,342	\$ 580,537,928
b	Claims processed outside of the company's claims system	\$ 145,095,783	\$ 145,095,783
c	Incurred but not paid claims		\$ 9,826,836

This is the risk adjustment calculation.

$$T_i = \left[\frac{PLRS_i \cdot IDF_i \cdot GCF_i}{\sum_i (s_i \cdot PLRS_i \cdot IDF_i \cdot GCF_i)} - \frac{AV_i \cdot ARF_i \cdot IDF_i \cdot GCF_i}{\sum_i (s_i \cdot AV_i \cdot ARF_i \cdot IDF_i \cdot GCF_i)} \right] \bar{P}_s$$

Where

\bar{P}_s = State average premium * 0.86; PLRS_i = plan i's plan liability risk score; AV_i = plan i's metal level AV; ARF_i = plan i's allowable rating factor; IDF_i = plan i's induced demand factor; GCF_i = plan i's geographic cost factor;

1. Please clarify how the Actual vs. Expected Experience was calculated in Table #1 submitted with your response, and indicate how this change percentage relates to the Projected Allowed Claims and other components of the rate change shown.

In the previous response we were using the Actual to expected to include all items of the rate increase not included in the prior portions of the exhibits. We have re-labeled that section as the “residual difference” and we have also updated the rate increase to match our re-filing due to risk adjustment results released on June 28, 2019. This residual difference is now quite small (Only 0.41% in this filing).

2. Your response to item 5 of our previous objections shows no incurred but not paid claims for allowed claims. Please explain or correct.

We did not include completion in the allowed claims, only in the incurred claims. We have adjusted all exhibits to include the value of completion in the allowed claims.

Please note that in the rate build up, the utilization trend was adjusting for this, so we have lowered the utilization trend so that the rates match what was previously filed.

We have updated our response for item 2 of this objection to clarify the components.

3. The total allowed and incurred claims shown in your response to item 5 of our previous objections are \$816,410,125 and \$735,460,547 respectively. These amounts are greater than the \$800,545,019.12 and \$709,768,605.55 shown in the URRT. Please explain or correct.

The claims in the URRT include Pharmacy rebate amounts. The response to item 5 of our previous objection did not include Pharmacy rebate amount. The difference between the two is the value of the pharmacy rebate, which can be found on Table 2 of the AM exhibits. We have updated our response for item 2 of this objection to clarify the components.

4. Your response to item 10 of our previous objections states that the difference between the estimated risk adjustment amount shown in the PAAM exhibits and the amount shown in the RATEE files PA summary table has no impact on pricing and rates because it is a value from the Experience Period. However, the “Projected Risk Adjustment PMPM” section of the Part III Memorandum indicates that the starting point was experience period data and further states, “We also considered preliminary 2018 risk transfer results.” In light of this, please explain why the difference noted in item 10 has no impact on pricing and rates.

What we meant by that statement is that they had no impact on rates that were currently filed, since we would update them based on the risk adjustment results released on June 28, 2019 if those results were materially different from what we had assumed when we submitted the filing. We have now revised our rates as a result of the June 28, 2019 report and have submitted those revised rates.

5. Please clarify your response to item 15 of our previous objections. Which row of which spreadsheet are you referring to? Do you intend to provide a correction when you complete your analysis of what is causing the discrepancy? If not, please explain.

We have corrected the issue in the updated URRT submitted in the submission to revise the risk adjustment.

6. Regarding your response to item 18 of our previous objections, please revise or provide substantial support for the induced utilization factors. The differences in the factors between metal levels is substantially greater than the induced utilization factors used in the risk adjustment model. This is the case for silver and gold plans and even more so for the platinum plan. The induced utilization factor for the platinum plan is 1.74 times the factor for the bronze plans, which strongly suggests that they reflect differences in the morbidity of the populations expected to enroll in the plans, which is contrary to the URR instructions and the Single Risk Pool concept. Please address this.

Please see the attached exhibits.

7. Please provide responses to items 19.b, 19.c, 30, and 31 of our previous objections.

Please see the response to question 8 for the response to 19 b., 19 c.

Regarding questions 30 and 31, We do not have this data readily available at the level that is being requested, therefore we are unable to provide a response to these two questions. We also view this data as proprietary, and since the filing responses are made public, we think it would be inappropriate to provide this information if it were readily available.

8. Your response to item 20 of our previous objections did not provide a quantitative development or any explanation of how the 2.7% estimate for the health insurer fee was determined. Please provide support for this estimate.

Please see attached exhibits.

9. Regarding your response to item 21 of our previous objections, please explain how the Age Calibration Factor reflects members with \$0 premium due to the requirement to charge premium for no more than three children.

The impact of members with \$0 premium due to requirement to charge premium to no more than three children is not included in the age calibration factor. We do not anticipate the percentage of children with \$0 premium increasing or decreasing, so there was no need to make an adjustment for this item.

The impact of \$0 premium is about 0.3% we would have collected 0.3% more premium if children in families with more than three children were required to pay premium.

10. Where is the RA User Fee reflected in your response to item 23 of our previous objections?

We have updated this exhibit after we moved the RA user fee into taxes.

11. Table 6 of “2020_Indiv_KHPE_PAAMExhibits_061819.xlsm” shows taxes and fees totaling 3.87% including .03% for the RA User Fee. Cell E54 of Worksheet 2 of the URRT shows 3.84%. Table 5 of “2020_Indiv_KHPE_PAAMExhibits_061819.xlsm” shows Projected Risk Adjustment PMPM of \$56.19, while cell D81 of Worksheet 2 of the URRT shows \$0.18 less (i.e. -\$56.37). This suggests that the RA User Fee was included in risk adjustment in the URRT rather than in taxes and fees. If so, please provide a corrected URRT.

We have updated the URRT.

12. Regarding your response to item 24 of our previous objections, please address the following:

a. The revised Actuarial Certification does not include a certification that the percent of total premium that represents EHB included in Worksheet 2, Sections III and IV, was calculated in accordance with actuarial standards of practice.

We have updated the actuarial certification.

b. The last sentence of the revised Actuarial Certification begins, “If an alternate methodology was used to calculate the AV Metal Value for at least one plan offered” Either alternate methodology was used or it was not. Also, it states, “a copy of the actuarial certification required by 45 CFR Part 156, §156.135 will be included” when in fact it has already been included in the initial filing. Please clarify the certification.

That statement is saying that some plans used an alternate methodology and some plans did not. For the plans that used an alternate methodology we provided the required certification.

We have reworded that statement to say, “...when an alternate methodology was used to calculate the AV metal value then a copy of the actuarial certification required by 45 CFR Part 156, §156.135 was included.”

13. Your response to item 25 of our previous objections states that the requested data in Table 4, Columns J and K of the PAAM exhibits was not provided last year but did not explain why it was not provided this year. Please provide it or explain why this data is not available.

We do not have this data readily available at the level of detail requested, therefore we have not provided it. Since the data at this level of detail is not used in the rate calculation it did not impact our MAIR. We did provide the aggregate value of the pharmacy rebates in the experience period in table 2 as required, and the value from table 2 is the value that impacts the MAIR.

14. Your response to item 28 of our previous objections states that the DOH Approval Date for each network has been added to Table 14. However, in the PAAM exhibits included with your response, the DOH Approval Date column in Table 14 is still blank. Please provide the revised version.

We have updated this exhibit.

15. Your response to item 29 of our previous objections demonstrates that the PCP copay is less than 50% coinsurance but no demonstration is given for the specialist copay. Please explain or correct.

We structure our specialist to be 2X primary care (PCP) cost share to encourage PCP engagement.

16. Your response to item 32 of our previous objections does not appear to address the last sentence of the request: “Also, provide a supporting worksheet that shows the quantitative development of the proposed factors in Table 10, in support of the overall change in benefits factor shown in Table 5.” Please address this.

Because the overall change in benefits factor shown in Table 5 is 1.000, we did not provide a quantitative development because a factor of 1.000 would not affect the rates.

17. As requested, you have added the RA User Fees in Table 6. Please confirm that there were no offsetting adjustments made elsewhere, as this fee was not included in the initial submission.

We removed RA User Fee of \$0.18 from the Projected Risk Adjustment PMPM in Table 5 as noted in our response to question 19a of the June 18th objection letter.

18. In response to the Department's RADV survey, issuers indicated that they did not include an adjustment in the initial submission, as there was no supportable reason for a RADV adjustment in the 2020 rate submission. Therefore, the Department has determined that there should be no RADV adjustments in the 2020 rate filings; please modify the filing accordingly, if necessary.

As noted in the response to the last objection letter, we did not include any RADV adjustment in our submission, therefore no change is required for this item.

19. If the risk adjustment results released on June 28, 2019 are inconsistent with your projected assumptions, you may modify the risk adjustment transfer amount in Table 5. Supporting documentation must be provided for all modifications. If such a modification is made, revise all the documents and exhibits impacted and the PA Actuarial Memorandum to discuss this change. This change must be made with your responses due by July 12, 2019.

We have updated our exhibits and submitted revised rates.

Original Response to #1 of June 18 Objection
