**PA Small Group Rate Filing**

May 10th, 2016

This rate filing presents proposed premium rates effective January 1, 2017 through December 31, 2017 for medical and Rx benefit plans to be sold by the UnitedHealthcare Insurance Company to small group employers.

The filing has been prepared as required by the “FINAL 2017 ACA-Compliant Health Insurance Rate Filing Guidance”, as well as current ACA rules and more recent guidance from the PA Department of Insurance. This rate filing should not be used for any other purposes. Within that context, there are no limitations or constraints on the use or applicability of the rating items discussed herein. The intended user of this filing is the PA Department of Insurance.

#### E. Benefit Changes

Changes to member cost sharing were required for certain benefit plans. Use of the new federal Actuarial Value (AV) Calculator led to some benefit plans falling outside the allowed +/-2% AV metal ranges. Benefit plan changes were made to move these plans back into the allowed AV ranges. The benefit changes for these plans are listed in Exhibit 2.

We refined the medical plan price relativities to reflect the most recent methodology update using the most recent available models. The medical plan price relativities were developed using our pricing model ARC (Actuarial Relativity Calculator). The ARC model is based on UnitedHealthcare nationwide experience data, containing utilization frequencies and unit costs by service category, and claim distributions and adjustment factors for a large number of plan design variables. Benefit design parameters such as deductibles, coinsurance, copays, out-of-pocket maximums, etc. were input for each plan into ARC. The expected net-to-allowed relativity for each plan is then used to develop the plan relativities for each benefit plan. All benefit plans are priced consistently with each other, with the rates different only by the estimated value of the benefit differences. The prescription drug plan relativities were similarly developed using our Rx Pricing model: this model, based on nationwide UnitedHealthcare prescription drug experience, values the cost differences of Rx copays by tier, and other plan cost sharing features such as Rx deductibles and coinsurance.

All the changes are revenue neutral and the Plan Relativity Factors are listed in Exhibit 3a, 3b and 3c.

## F. Experience Period Claims and Premium

### Premiums (net of MLR Rebate) in Experience Period

Earned premium for our small group market business in Pennsylvania for 2015 was approximately \$ 90,488,083. MLR rebate payments are not anticipated in Pennsylvania for the 2015 calendar year, an estimate that was provided by UnitedHealthcare's finance department. The estimated 2015 benefit year risk adjustment transfer payment is \$ 3,647,312. Therefore, premium net of MLR rebates and risk adjustment (payment/receivable) is \$86,840,771.

The claims data was available directly from company claims records. The claims data represents all non-grandfathered policies in the single risk pool. Table 2 is consistent with the data used in the URRT.

### Paid Through Date

The experience period is January 1, 2015 to December 31, 2015, with claims paid through February 29, 2016.

### Support for estimate of incurred but not paid claims

The UnitedHealthcare Reserving process utilizes the Reserve Production System (RPS) to record reserves into the PeopleSoft general ledger. Fee for service and paid claim data is loaded into RPS and becomes the basis for the monthly reserve calculations at the various business unit, location, and line of business levels. The assignment of the paid claims into RPS packages is based on the mapping rules maintained by the Corporate Actuarial department. RPS calculates a preliminary best estimate Incurred But Not Reported (IBNR) for each reserving model (package) primarily using standard completion factors based on historical claim experience. The Claims Reserving Team adjusts the preliminary IBNR based on specific knowledge of the entity (i.e. catastrophic claims, pending claims, etc.) to calculate the final IBNR. In months where adjudicated claims experience is not complete enough for an estimate using completion factors, a seasonally adjusted PMPM is used to estimate incurred claims.

A description of the Sarbanes Oxley controls, audited by Deloitte & Touche, in place regarding the reserving process includes:

- 1) Market Paid claim Tie-outs: To verify completeness and accuracy of financial data in RPS, paid claim data is tied out between source system (RPS) and PeopleSoft general ledger.
- 2) Market Expense Tie-outs: RPS reserve changes on the income statement are tied to the PeopleSoft general ledger to ensure that information is accurate subsequent to computing the reserve.

Allowed claims by benefit category were obtained from UnitedHealthcare claim paying system reports.

The same completion factors are applied to both incurred and allowed claims amounts.

### Non-EHB benefits and the experience period cost

The non-EHB claims account for 1.9% of the total claims in the experience period.

### Capitation

Capitation includes all services provided under one or more capitated agreements and it is applied uniformly across all membership during the experience period. For calendar year 2015 the capitated amount is \$13.85 PMPM.

### Pharmacy Rebates

The prescription drug cost is net of rebates received from drug manufacturers. For calendar year 2015 the average pharmacy rebate is -\$13.89 PMPM.

### Risk Adjustment and Reinsurance:

Our 2015 risk adjustment transfer PMPM is estimated using data provided to UnitedHealthcare as a result of our participation in a multi-state study done by a large, independent actuarial consulting firm. Based on the results of that study, we expect that risk level of the membership insured by UnitedHealthcare Insurance Company in Pennsylvania to be lower than the market. This results in an approximate adjustment of -\$15.36 PMPM to the experience period premium. The premium in Worksheet 1, Section 1 is net of the risk adjustment transfer.

Since this is a small group filing and the state of Pennsylvania chose not to combine its individual and small group markets, reinsurance recoveries are not applicable to this rate filing. As such, no adjustments were made to the experience.

### G. Credibility of Data

The experience for this legal entity exceeds the number of member months we consider to be the standard of full credibility for rate development purposes. As such, the experience is given 100% credibility.

### H. Trend Identification

Two years of annual trend were applied to our 2015 experience to project it to the 2017 rating period. The table below details the components of each trend factor.

Service Category	Cost*	Utilization*	Composite	Weight*
Inpatient Hospital	3.76%	0.55%	4.34%	19.02%
Outpatient Hospital	2.98%	4.37%	7.48%	37.81%

UnitedHealthcare develops forward-looking medical expense estimates based on a number of considerations. In general, recent/emerging claims experience is reviewed at the market level for several broad medical expense categories (inpatient, professional, pharmacy, etc.), with utilization, unit cost, and benefit leveraging identified for each category. Future trends are developed based on a projection of each component.

Utilization rates by category are measured and projected. Forward looking utilization levels are developed based on emerging market level data, supplemented by regional and/or national level utilization data. Macro-economic data is often used to develop assumptions regarding directional changes in national health care consumption rates. UnitedHealthcare uses same store analysis to reflect utilization.

Market-level unit cost projections are developed based on evaluations of current and anticipated provider contract economics, as well as consideration to both current and expected changes in non-contracted provider cost exposure. Unit cost projections also consider the estimated cost impact of new technologies, service availability/mandates, or other factors that might influence mix of procedures. Unit cost is based on our contractual changes with providers.

In addition, market-level healthcare affordability activities that are expected to impact forward-looking medical costs are recognized. Depending on the nature of individual initiatives, the impact may be recognized in one or more of the component cost items discussed above. Only incremental activities are recognized for this purpose in the expected trend impact for any particular period.

This rate filing proposes quarterly rates.

The Index Rate for the experience period is approximately 98.1% of allowed claims due to benefits in excess of EHBs. The reported percentage amount is based on experience data. The index rate of the experience period has been reported accordingly, rounded to the nearest whole dollar value as required by the URRT. The Index Rate in the projection period represents 98.1% of allowed claims due to the benefits in excess of EHBs.

The Index rate calculation in worksheet 5 is demonstrated in the table below:

<b>Total</b>	<b>100.0%</b>	<b>\$395.30</b>	<b>\$15.20</b>	<b>\$410.51</b>

The difference in the two methods of developing the index rate comes from applying a monthly rather than quarterly trend. Also, in the second table we are including in the trend the pro-rated impact of the Insurer's Fee for coverage in 2018 going forward. We are also using an annual forward pricing trend of 6.7% as detailed in Exhibit 6 (cells O15 and O16) rather than the 6.29% that is the historical claims trend that Table 5 is utilizing in the calculation. Therefore, the difference (\$384.62 versus \$395.30) flows through the calculation and is the reason for some of the differences shown in subsequent tables.

The market adjusted index rate includes market-wide adjustments for the risk adjustment program and exchange user fees. Incurred values were grossed up by the average paid-to-allowed ratio to reflect an allowed basis.

Plan adjusted index rates include adjustments for all allowable plan level modifiers as defined in the market rating rules, 45 CFR 156.80(d)(92). The adjustments are as follows:

#### Actuarial Value and Cost Sharing Adjustment

UnitedHealthcare has two proprietary pricing models that were used in developing the actuarial value and cost sharing adjustment for each plan. One is a medical pricing model, which calculates plan relativity factors for medical benefits and plans with Rx designs that are first subject to the

medical deductible (HSA plans). The second model is an Rx pricing model, which calculates plan relativity factors for Rx benefits that are not subject to the medical deductible (non-HSA plans). The medical and Rx results were blended together based on the expected proportion of medical and Rx claims in order to determine the actuarial value and cost sharing adjustment for each plan. Also included under the actuarial value and cost sharing adjustment are adjustments for leveraging and the difference between the average plan relativity factor and the projected paid to allowed ratio.

Historical affiliated carrier experience was used to develop the actuarial value and cost sharing adjustment for each plan as well as the distribution and administrative costs adjustment.

#### Provider network, deliver system and utilization management adjustment

Any adjustments for these items are included in the plan relativity factors.

#### Benefits in Addition to EHBs

Benefit Extra EHB is the percentage of claims that are covered and are not included in EHB. The projected non- EHB impact is 1.9%.

#### Distribution and Administrative Costs

Distribution and Administrative Costs include premium tax, PCORI fees, SG&A, quality improvements, federal income tax, and after-tax income. These items are discussed in the section Non-Benefit Expenses and Profit of this memorandum. Risk adjustment transfers and user fees and exchange fees are excluded because they are accounted for in the market adjusted index rate.

#### Tobacco Factors

Tobacco factors are not used in rating. As such, no adjustment is made for costs that are expected to be recouped through the tobacco surcharge.

#### Calibration

Plan Adjusted Index Rates need to be calibrated to apply the allowable rating factors of age and geography in order to calculate the Consumer Adjusted Premium Rates. Calibration factors are applied uniformly to all plans.

#### Age Calibration

The calculated age curve calibration is 1.356, which equals the average age factor of the expected member distribution by age. This corresponds with an approximate age of 43 years. The age factors used in this calculation are the HHS-specified age curve.

#### Geographic Calibration

The geographic factor calibration is 0.831, which equals the expected average area factor. A table of the geographic rating factors is below.

Table 13. Geographic Factors			
Geographic Area Factors			
Area	Counties	Current Factor	Proposed Factor
Rating Area 1	Erie, Crawford, Mercer, Venango, Clarion, Forest, Warren, McKean	0.715	0.734
Rating Area 2	Elk, Cameron, Potter	0.698	0.769
Rating Area 3	Tioga, Clinton, Lycoming, Sullivan, Bradford, Susquehanna, Wyoming, Lackawanna, Wayne, Pike, Monroe, Carbon, Luzerne	0.955	1.003

Geographic rating factors are reviewed periodically versus UnitedHealthcare claims data that reflects unit cost differences by county. Such a review was conducted as part of our January 1, 2017 rate development.

Our geographic factors are based on the previously approved area factors for this product, adjusted to reflect the most recent cost saving estimate from our network contracting initiatives, and unit cost differences by county.

Population morbidity by area was not considered when determining geographic area factors changes.

Calibrating the plan adjusted index rate to the age curve and geographic distribution results in the calibrated premium rate for each plan. The calibrated premium rate represents the preliminary premium rate charged to an individual before applying the consumer specific rating adjustments for age, area, and tobacco status.

#### Consumer Adjusted Premium Rate Development

The consumer adjusted premium rate is the final premium rate that is charged to an individual. It is developed by calibrating the plan adjusted index rate by the average age and geographic rating factors, and applying the consumer specific age, geographic, and tobacco status rating factors. The calculation is provided below.

$$\begin{array}{rcl} & \text{Plan Adjusted Index Rate} & \\ / & \text{Age Calibration Factor} & \\ / & \text{Geographic Calibration Factor} & \\ x & \text{Consumer Specific Age Rating Factor} & \\ x & \text{Consumer Specific Geographic Rating Factor} & \\ x & \text{Tobacco Status Factor} & \\ x & \text{Small Group Trend Adjustment} & \\ = & \text{Consumer Adjusted Premium Rate} & \end{array}$$

#### Small Group Trend Adjustment

Since this is a small group filing that includes rates with schedule trend increases by quarter, the Index Rate, Market Adjusted Index Rate and Plan Adjusted Index Rate reflect the member weighted average premium over the calendar year. As such, the Consumer Adjusted Premium Rate needs to include a trend adjustments quarter the rates are being calculated.

## **B. Retention Items**

#### Administrative Expense Load

The administrative expense load is a long-term estimate of administrative expenses, including selling expenses and general administrative expenses. This load does not vary by product or plan. These assumptions are based on the general ledger actual results (GAAP) for 2015 with known adjustments. Known adjustments include, but are not limited to, pay increases/raises for employees and administrative expenses as a result of Healthcare Reform and compliance requirements.

The administrative expense allocation methodology used in pricing is appropriate because it is consistent with how UnitedHealthcare runs its business and how it allocates administrative costs for Statutory Filings and the Healthcare Reform Exhibits.

For this filing, this is calculated at 12.6%.

<b>Administrative Expenses Allocation</b>	<b>Estimated % of Premium</b>
Selling Expenses (Commissions, Broker Bonus)	3.67%
General Admin Expenses	8.94%
<b>Total</b>	<b>12.60%</b>

#### Profit and Risk Margin

The Profit and Risk Margin of 3.1% is shown in Worksheet 1, Section 3 of the URRT. This target does not vary by product or plan.

#### Taxes and Fees

Taxes and fees are expected to be 5.93% and include premium tax, exchange fees, PCORI fees, and federal income tax. The following is a breakdown of the taxes and fees.

<b>Premium Taxes and Fees Allocation</b>	<b>Estimated % of Premium</b>
Federal / State Income Tax on Profit & Risk Load	1.65%
Premium Tax	1.85%
ACA Taxes: Insurer Fee	1.90%
ACA Taxes: Reinsurance Fee	0.00%
ACA Taxes: PCORI Fee	0.05%
ACA Taxes: Risk Adjustment User Fee	0.04%
ACA Taxes: Exchange User Fee	0.00%
All Other Taxes & Fees	0.44%
<b>Total</b>	<b>5.93%</b>

### C. Normalized Market-Adjusted Projected Allowed Total Claims

The normalization factors are in the table below. The two factors with the biggest difference are the Average age and average geographic factors.

The 2017 average age factor is slightly higher than the 2016 factor, the average age in 2017 is 1.356 compared to 1.316 in 2016.

The 2017 average geographic factor is .831 compared to .95 in 2016. The lower average geographic factor in 2017 is the result of a membership distribution shift to more members in Western PA (Regions 1, 2, 4 & 5) where the average geographic factor is lower.

Normalization Factors	2016	2017
Average Age Factor	1.316	1.356
Average Geographic Factor	0.950	0.831
Average Tobacco Factor	1.000	1.000
Average Benefit Richness (induced demand)	1.106	1.106
Average Network Factor	1.000	1.000
Market-Adjusted Projected Allowed Total Claims PMPM	\$ 453.67	\$ 407.26

The risk adjustment estimate changed from -10.1% for 2016 to -4.2% to 2017.

The reinsurance fee for 2016 was \$2.25 and for 2017 is \$0.

## 6. Actuarial Certifications

I, [REDACTED], an Actuary at UnitedHealthcare, I am a members of the American Academy of Actuaries, and I meet the Academy's qualification standards for rendering statements of actuarial opinion with respect to the filing of rates for health insurance products. I have reviewed applicable ASOPs during the preparation of this rate filing.

To the best of my knowledge and judgment, I certify that:

- The projected index rate is:
  - In compliance with all applicable State and Federal Statutes and Regulations (45 CFR 156.80 and 147.102),
  - Developed in compliance with the applicable Actuarial Standards of Practice,
  - Reasonable in relation to the benefits provided and population anticipated to be covered,
  - Neither excessive, deficient, nor unfairly discriminatory.
- The index rate and only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) were used to generate plan level rates.
- The percent of total premium that represents essential health benefits included in Worksheet 2, Sections III and IV were calculated in accordance with actuarial standards of practice.
- The geographic rating factors reflect only differences in the costs of delivery and do not include differences for population morbidity by geographic area.
- New plans cannot be considered modifications of existing plans under the uniform modification standards in 45 CFR 147.106.
- The information presented in the PA Actuarial Memorandum and PA Actuarial Memorandum Rate Exhibits is consistent with the information presented in the 2017 Rate Filing Justification
- All factor, benefit and other changes from the prior approved filing have been disclosed in the actuarial memorandum.
- The AV calculator was used to determine the AV metal values shown in Worksheet 2 of the Part I Unified Rate Review Template for all plans. Some of our plan designs are not directly compatible with the AV calculator. The values were developed in accordance with generally accepted actuarial principles and methodologies. The unique plan design actuarial certification required by 45 CFR Part 156.135 has been separately attached.
- The Part I Unified Rate Review Template does not demonstrate the process used by the issuer to develop their rates. Rather, it represents information required by federal regulation to be provided in support of the review of rate increases, for certification of qualified health plans for federally facilitated exchanges, and for certification that the index rate is developed in accordance with federal regulation and used consistently and only adjusted by the allowable modifiers.

I certify that the anticipated loss ratio meets the minimum requirement, the rates are reasonable in relation to benefits, the filing complies with the laws and regulations of PA and all applicable Actuarial Standards of Practice, including ASOP No. 8 and the rates are not unfairly discriminatory.

**UnitedHealthcare Insurance Company**  
**Pennsylvania Small Group**  
**2017 Non-Grandfathered Employer Rates**

**Scope and Range of the Rate Increase**

The requested average rate change for the small group health benefit plans sold in the state of Pennsylvania is +4.2%, though rate changes may range from -3.1% to +15.3% depending on the specific plan. Additional premium changes may occur due to member aging and changes in plan selection. Rate changes will be effective January 1, 2017. It is projected that there will be 15,520 covered lives impacted by this rate change.

**Changes in Medical Service Costs**

There are many different health care cost trends that contribute to increases in the overall U.S. health care spending each year. These trend factors affect health insurance premiums, which can mean a premium rate increase to cover costs. Some of the key health care cost trends that have affected this year's rate actions include:

- **Increasing Cost of Medical Services:** Annual increases in reimbursement rates to health care providers – such as hospitals, doctors, and pharmaceutical companies.
- **Increased Utilization:** The number of office visits and other services continues to grow. In addition, total health care spending will vary by the intensity of care and use of different types of health services. The price of care can be affected by the use of expensive procedures such as surgery versus simply monitoring or providing medications.
- **Higher Costs from Deductible Leveraging:** While health care costs continue to rise every year, if deductibles and copayments remain the same, a greater percentage of health care costs need to be covered by health insurance premiums each year.
- **Cost shifting from the public to the private sector:** Reimbursements from the Center for Medicare and Medicaid Services (CMS) to hospitals do not generally cover the cost of providing care to these patients. Hospitals generally make up this reimbursement shortfall by charging private health plans more.
- **Impact of New Technology:** Improvements to medical technology and clinical practice require use of more expensive services - leading to increased health care spending and utilization.

**Changes in Benefits**

Changes in covered benefits or benefit plan designs impact costs and therefore affect premium changes. Benefit plans are typically changed for one of three reasons: to comply with the

requirements of the Affordable Care Act, to respond to consumer feedback, or to address a particular medical cost issue to provide for greater long-term affordability of the product.

The Affordable Care Act implemented requirements for the “value” that must be offered by plan designs in the Individual and Small Group markets. These are called “metal levels”. For a benefit plan to remain classified within a particular metal level from year to year, adjustments to deductibles, copayments or coinsurance are sometimes required. These adjustments impact the cost and therefore the premium increases for the plan.

### **Administrative Costs**

UnitedHealthcare works to directly control administrative expenses by adopting better processes and technology and developing programs and innovations that make health care more affordable. We have led the marketplace by introducing key innovations that make health care services more accessible and affordable for customers, improve the quality and coordination of health care services, and help individuals and their physicians make more informed health care decisions. Updated analysis of administrative costs has shown that the administrative costs associated with these plans are higher than previously estimated and those costs are included in the requested rate change.

State and Federal government imposed taxation and fees are significant factors that impact health care spending and have to be included in the administrative costs associated with the plans. These fees include Patient Protection and Affordable Care Act taxes and fees which impact health insurance costs and need to be reflected in premium.

The rates reflect the needed revenue to cover Essential Health Benefit requirements and other healthcare reform related costs and needed rate actions from most recent experience. Base premium rates are provided in Exhibit 1.

**AGE FACTORS**

Age factors are provided in Exhibit 1. There are no changes from the age factors in our prior January 1, 2016 filing.

**AREA FACTORS**

We are revising the Area Factors from our prior approved 2016 filing. Area factors are provided in Exhibit 1. The change is revenue neutral. The rating areas were determined by the State of Pennsylvania.

## PRICING TREND

Pricing trend is being reduced to reflect favorable changes in projected claims trends.

Pricing trend is provided in Exhibit 1.

## RATING FORMULA:

The rating formula for non-grandfathered small employer group business is shown below:

$(\text{Med Base Rate} \times \text{Med Relativity} + \text{Rx Base Rate} \times \text{Rx Relativity}) \times \text{Trend Factor (EDA)} \times \text{Age Factor} \times \text{Area Factor} = \text{Final Health Premium Rate}$

## PLAN DESIGNS AND RATING FACTORS

This rate filing includes some PPACA compliant plans from last year's filing. The plan designs with plan relativities and actuarial value metal tiers are provided in Exhibits 2 and 3. Pharmacy plan details are included on Exhibit 2. All listed plans are designed based on the final Market Reform Rule requirements.

Actuarial Value calculations have been conducted to ensure actuarial values are within the allowed range for each metal tier. The metal tier for each plan has been provided in Exhibit 2. Mental Health Parity testing has been conducted, and final plan designs will ensure compliance.

All plans have been priced on an actuarially equivalent basis, based on the final Market Reform Rule requirement. The plan-specific adjustments to the market-wide index rate (plan relativities) do not reflect differences in health status or risk selection.

## Experience Period Premiums and Claims:

- **Paid Through Date:** The experience period is 1/1/2015 to 12/31/2015 paid through 2/29/16. The experience base includes PPACA plans marketed during 2014 and 2015 and pre-PPACA plans marketed during 2014.
- **Premiums (net of MLR Rebate) in Experience Period:** Earned premium for the experience period, net of rebate and estimated risk adjustment, was \$86,840,771. The estimated MLR rebate payment attributable to the Small Group business on this license is \$0.
- **Allowed and Incurred Claims during the Experience Period:** Incurred claims were developed by first starting with actual claims paid through 2/29/16 by incurred date. To these paid claims an estimate of incurred but not paid was added to determine the total incurred claims. Here is a description of the reserve methodology:

The UnitedHealthcare Reserving process utilizes the Reserve Production System (RPS) to record reserves into the PeopleSoft general ledger. Fee for service and paid claim data is loaded into RPS and becomes the basis for the monthly reserve calculations at

the various business unit, location, and line of business levels. The assignment of the paid claims into RPS packages is based on the mapping rules maintained by the Corporate Actuarial department. RPS calculates a preliminary best estimate Incurred But Not Reported (IBNR) for each reserving model (package) primarily using standard completion factors based on historical claim experience. The Claims Reserving Team adjusts the preliminary IBNR based on specific knowledge of the entity (i.e. catastrophic claims, pending claims, etc.) to calculate the final IBNR. In months where adjudicated claims experience is not complete enough for an estimate using completion factors, a seasonally adjusted PMPM is used to estimate incurred claims.

A description of the Sarbanes Oxley controls, audited by Deloitte & Touche, in place regarding the reserving process include:

- 1) Market Paid claim Tie-outs: To verify completeness and accuracy of financial data in RPS, paid claim data is tied out between source system (RPS) and PeopleSoft general ledger.
  - 2) Market Expense Tie-outs: RPS reserve changes on the income statement are tied to the PeopleSoft general ledger to ensure that information is accurate subsequent to computing the reserve.
- Allowed claims by benefit category were obtained from UnitedHealthcare claim paying system reports.

**Benefit Categories:** Claims were assigned to benefit categories by our claim department using standard industry definitions of services.

**Projection Factors:**

- **Changes in the Morbidity of the Population Insured:** Based on the characteristics of groups insured in current book of business, we have estimated the possibility for small employers to drop out from the fully insured health insurance market, and thus the potential changes in the demographic and morbidity of the fully insured population. The risk identified as small employer drop out risk is included in URRT “population risk morbidity” trend category.
- **Changes in Benefits:** No other benefit changes are assumed.
- **Changes in Demographics:** No changes in demographics are assumed. The HHS proposed age factors adopted by Pennsylvania are used in rating.
- **Trend Factors:** UnitedHealthcare Medical Expense Forecasting Process Overview & Considerations:

UnitedHealthcare develops forward-looking medical expense estimates based on a number of considerations. In general, recent/emerging claims experience is reviewed at the market level for several broad medical expense categories (inpatient, professional,

pharmacy, etc.), with utilization, unit cost, benefit leveraging, and business mix identified for each category. Future trends are developed based on a projection of each component.

Utilization rates by category are measured and projected net of business mix (employer mix, benefit mix, demographic mix, etc.). Forward looking utilization levels are developed based on emerging market level data, supplemented by regional and/or national level utilization data. Macro-economic data is often used to develop assumptions regarding directional changes in national health care consumption rates.

Market-level unit cost projections are developed based on evaluations of current and anticipated provider contract economics, as well as consideration to both current and expected changes in non-contracted provider cost exposure. Unit cost projections also consider the estimated cost impact of new technologies, service availability/mandates, or other factors that might influence mix of procedures.

In addition, market-level healthcare affordability activities that are expected to impact forward-looking medical costs are recognized. Depending on the nature of individual initiatives, the impact may be recognized in one or more of the component cost items discussed above. Only incremental activities are recognized for this purpose in the expected trend impact for any particular period.

Business mix changes that influence medical cost trends are also reviewed and projected, with appropriate input from sales and underwriting staff. These factors include changing mix of employer groups, mix of benefits, and demographic changes. For the purposes of developing premium pricing trend projections, the component of trend attributable to business mix is excluded.

#### **Credibility Manual Rate Development:**

- **Source and Appropriateness of Experience Data Used:** The fully credible experience period source data used to develop manual rates is the actual small group experience for UnitedHealthcare Insurance Company in Pennsylvania.

**Credibility of Experience:** The fully credible experience period source data used to develop manual rates is the actual experience for the PA Small Group business.

**Paid to Allowed Ratio:** The paid to allowed average factor in the projection period is based on the projected membership distribution.

#### **Risk Adjustment and Reinsurance:**

- **Projected Risk Adjustments (PMPMs):** Based on a Risk Adjustment study conducted by an independent consulting firm, we expect that the combined risk level of membership insured by UnitedHealthcare Insurance Company is [REDACTED] [REDACTED] than the state average risk level assuming the member risk level remains at current status. The same estimate was used for Experience Period as for Projection Period.
- **Projected ACA Reinsurance Recoveries Net of Reinsurance Premium:** No reinsurance recoveries are assumed.

**Non-Benefit Expenses and Risk Margin:** The expenses assumed in the development of the proposed rates are as follows: The administrative expenses are the total average expenses for the UnitedHealthcare Insurance Company small group license. Except for the addition of PPACA fees, they are forecasted 2016 year expenses that are expected to continue in the future.

% of Premium	Expense Category
12.6%	Sub-Total Admin Expenses
3.07%	Profit
<u>5.89%</u>	Taxes & Fees
21.56%	Total

**Projected Loss Ratio:** The projected loss ratio using federally prescribed MLR methodology is 83.6%.

#### **Single Risk Pool:**

The Single Risk Pool reflects all covered lives for every non-grandfathered product and is established according to the requirements in 45 CFR part 156.80(d) which includes all enrollees in all health plans (other than grandfathered health plans) subject to section 2701 of the Public Health Service Act. The Single Risk Pool is specific to the legal entity and the state of this filing.

#### **Index Rate:**

The development of the Index Rate for Projection Period is shown in the table below. The Q1 Projected Allowed Claims is the Projected EHB Allowed Experience Claims from Section III. We then add in a monthly trend factor. The Index Rate is the membership weighted average for each effective date. We use total Pennsylvania experience in our base rate review process to determine rate changes.

#### **Market Adjusted Index Rate:**

The market adjusted index rate includes market-wide adjustments for the risk adjustment program and exchange user fees. Incurred values were divided by the average paid-to-allowed ratio to reflect an allowed basis.

#### **Plan Adjusted Index Rate:**

Plan Adjusted Index Rates are provided in the URRT Part I. The adjustments that have been applied to the development of the Plan Adjusted Index Rates include:

Provider Network: these adjustment factors are developed based on the underlining provider network features, contract terms, utilization and cost patterns due to the network features.

Benefit Extra EHB is the percentage of claims that are covered and are not included in EHB.

Actuarial Value and Cost Sharing: These values are developed with the method identified in the sections below and applied to each plan accordingly.

Distribution and Administrative Cost: This adjustment is developed based on the method described in the "Non-Benefit Expense and Profit & Risk" section. The same adjustment has been applied to all plans to develop the Plan Adjusted Index Rate.

The formula to develop the Plan Adjusted Index Rate is as below:

Plan Adjusted Index Rate= (Market Adjusted Index Rate X (1+ Provider Network Savings) X Benefit Extra EHB X Actuarial Value and Cost Sharing)/(1- Distribution and Administrative Cost).

### Calibration:

Age Curve Calibration is calculated as the premium weighted average age rating factors (based on ACR compliant national standard age curve) in experience period. The factor is calculated to be 1.3556 which translates to an approximate average age of 43 years old.

Geographic Factor Calibration is calculated as the premium weighted average rating area factors (based ACR compliant rating area setting) in experience period. The factor is calculated to be 0.8311.

### Description of development of geographic rating factors

Geographic area rating factors are reviewed periodically versus UnitedHealthcare claims data that reflects unit cost differences by county. Such a review was conducted as part of our January 1, 2017 rate development. For this filing, there are proposed changes to previously approved area factors as outlined in Exhibit 1.

The calibration factors are applied uniformly to all plans.

### **Calibrated Plan Adjusted Index Rate**

Consumer Adjusted Premium Rate is developed with the formula below:

Consumer Adjusted Premium Rate = Plan Adjusted Index Rate x 1/ Age Curve Calibration  
X 1/ Geographic Factor Calibration

Member level plan premium rate information is provided in Rate Data Template.

**AV Metal Values:** The below actuarial certification describes the methodology and the AV calculator input values used for the plan design features that do not fit into the parameters of the AV calculator.

The AV metal value was calculated using the Federal AV calculator. For the benefit designs that cannot be directly coded in the Federal AV calculator, claim distribution information provided in the Federal AV calculator has been used to convert the benefit design in to equivalent benefit designs that can be coded in the Federal AV calculator.

Methodology									
a) All prescription drug plan designs in the UHC plan portfolio contain 3 tiered specialty drug benefits. The copay for the highest utilized tier is input into the specialty drug copay field of the HHS AV calculator.									
b) The inpatient and outpatient facility fields in the HHS AV Calculator do not directly match UHC benefit descriptions for those types of services. To account for the discrepancy in the HHS and UHC benefit definitions, the blended network function of the HHS AV Calculator is utilized (tier weight varies by plan design).									
c) Per occurrence copays for inpatient, outpatient facility, emergency room, skilled nursing facility, and imaging services require checking the deductible and coinsurance boxes, entering a copay, and calculating an effective coinsurance.									
d) Benefits for outpatient facility, imaging, lab outpatient professional, and x-ray/diagnostic services are tiered by place of service for some plan designs. In these cases, an effective copay and/or an effective coinsurance are used.									
e) In accordance with CFR 156.135(b)(3), certain plan designs required modifications outside of the HHS AV Calculator. For these plan designs, multiple runs were performed and blended together using UHC national data and HHS AV continuance tables. Examples of these plans include tiered specialist copays for gatekeeper plans, limited office visit copays for PCP and specialist, multiple in-network tiers, and pre-deductible allowance for office visits and ER services.									

**AV Pricing Values:**

Plans are priced through the proprietary UnitedHealthcare pricing model. The model, which was updated for January 1, 2017 pricing, uses UHC fully-insured national small-group claim experience for groups that were in force for all of calendar-year 2013 and is fully-credible. Current claim data is then projected to the pricing period based on national projections of utilization, unit cost, and sloping. These projections are done at the service category (inpatient, outpatient, etc.) level.

At this point, benefit design parameters such as deductibles, copays, coinsurance, etc. are applied to the claim distributions of the matching service category. This cost-sharing is applied, and the values of each service category are summed to come up with the overall benefit value. This overall benefit value is then compared to a base benefit design to calculate the plan relativity. In order to preserve consistency, the same claim experience and projection assumptions are applied to all plan relativity calculations.

**Membership Projections:** Membership is projected to continue at the current February, 2016 level. Membership in terminated plans has been mapped into 2017 plans.

**Terminated Plans and Products:** No products are being terminated. Some plans are being terminated as of the end of 2016. See Exhibit 5 for a list.

**Plan Type:** EPO, POS and Indemnity (Non Differential PPO).

**Warning Alerts:**

Line 55 and 57: The average premium PMPM does not match the member weighted Plan Adjusted Index Rate in the experience period. The differential is caused by a high proportion of experience in non-single risk pool compliant plans for which 0 is entered as the Plan Adjusted Index Rate for these plans.

Line 81 and 83: The small group Plan Adjusted Index Rates reflects the member weighted average of the rates for all effective dates in the filing, whereas the Worksheet 1 Single Risk Pool Gross Premium Avg. Rate reflects the effective date of the change in the Index Rate. The warning in line 83 is caused by Line 81.

**Reliance:** Not applicable.

**Actuarial Certification:**

I, [REDACTED] am an actuary of UnitedHealthcare and a member of the American Academy of Actuaries.

I certify that the projected index rate is:

- a. In compliance with all applicable State and Federal Statutes and Regulations (45 CFR 156.80(d)(1)),
- b. Developed in compliance with the applicable Actuarial Standards of Practice,
- c. Reasonable in relation to the benefits provided and the population anticipated to be covered, and
- d. Neither excessive nor deficient.

I certify that the index rate and only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) were used to generate plan level rates.

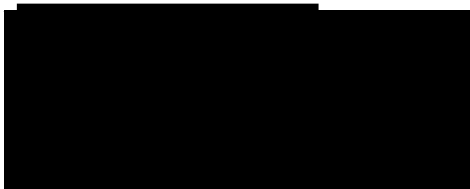

I certify that the percent of total premium that represents essential health benefits included in Worksheet 2, Sections III and IV were calculated in accordance with actuarial standards of practice.

I certify that the geographic rating factors reflect only differences in the costs of delivery (which can include unit cost and provider practice pattern differences) and do not include differences for population morbidity by geographic area.

I certify that the AV Calculator was used to determine the AV Metal Values shown in Worksheet 2 of the Part I Unified Rate Review Template. For plans designs that did not fit into the AV Calculator, included in this Part III Actuarial Memorandum is a description of the methodology and numerical values used to develop the AV metal values, and a certification as required by 45 CFR Part 156, §156.135. Some plans within this portfolio have cost sharing features that differ between individual and family coverage (i.e., when two or more people are covered by the plan). For all plans, consistent with the Actuarial Value Calculator inputs, we have used only the cost sharing provisions applicable to individuals in the actuarial value calculation.

I qualify my opinion to state that the Part I Unified Rate Review Template does not demonstrate the process used by UnitedHealthcare to develop the rates. This process is described in detail in my state submitted actuarial memorandum. Rather it represents information required by Federal regulation to be provided in support of the review of rate increases, for certification of qualified health plans for federally facilitated exchanges and for certification that the index rate is developed in accordance with Federal regulation and used consistently and only adjusted by the allowable modifiers.

Sincerely,

UnitedHealthcare
