

COMMONWEALTH OF PENNSYLVANIA

INSURANCE DEPARTMENT

* * * * *

IN RE: LONG TERM CARE INSURANCE

PUBLIC MEETING

* * * * *

BEFORE: TERESA D. MILLER, Commissioner
JOHANNA FABIAN-MARKS, Director, Bureau of
Life, Accident and Health Insurance
JAMES LAVERTY, Actuary
SANDY YKEMA, Department Counsel

HEARING: Thursday, March 10, 2016
9:00 a.m.

LOCATION: Rachel Carson State Office Building
400 Market Street
Harrisburg, PA 17101

Reporter: Seth R. Baier

2 -----
3 COMMISSIONER TERESA MILLER:

4 Welcome to today's hearing, and thank
5 you all for being here. My name is Teresa Miller, and
6 I have the pleasure of serving as Pennsylvania's
7 Insurance Commissioner. And I want to introduce a few
8 people here with me.

9 To my right is Johanna Fabian-Marks who
10 leads our Bureau of Life, Accident and Health
11 Insurance. And over here --- Jim is going to be
12 joining me up here shortly --- Jim Laverty is one of
13 our life and health actuaries in the Department. And
14 to my left is Joe DiMemmo who heads up --- he's our
15 deputy over corporate and financial regulation. So
16 Johanna and Joe will be providing presentations here
17 as soon as I finish my comments. But I just wanted to
18 share a few opening comments before we begin.

19 This hearing is going to focus on
20 long-term care rate requests that the Insurance
21 Department is now considering from the four companies
22 who will testify today. Additionally, we want to use
23 this opportunity to provide information about the
24 process the Department uses when reviewing rate
25 requests. We'll also look generally at why long-term

1 care health insurance rates have been rising so much
2 in recent years and ask the representatives of the
3 companies to explain the reasons for their rate
4 requests that they've submitted to us.

5 I'm holding this hearing as part of
6 Governor's Wolf's commitment to transparency in
7 government. I believe it's important for the public
8 to understand how we, as government regulators, review
9 rate requests that insurers bring to us. The public
10 needs to know that we're closely reviewing this
11 information insurance companies give us.

12 As I said, when we were considering and
13 approving rates for health insurance plans last year,
14 the impact on consumers is always our top priority
15 when we're looking at premium increases and the impact
16 on consumers is really what's at the forefront of our
17 mind, as Governor Wolf has made consumer protection
18 the top priority for the Insurance Department.

19 A key component in consumer protection
20 is making sure companies are able to pay all the
21 claims submitted to them. If companies don't have the
22 financial resources to pay claims, consumers obviously
23 suffer, and this is a key consideration as we review
24 rate requests as well.

25 I'd like to just begin before we start

1 through all the presentations to note briefly how we
2 got to this place in the long-term care insurance
3 market and what's happening in this market is taking
4 place across the country, not just here in
5 Pennsylvania. Twenty-five (25) to 30 years ago
6 long-term care insurance was seen as a good way for
7 people to plan for the possibility that they may some
8 day need skilled nursing care for a long period of
9 time. Long-term care insurance was designed and sold
10 as a product to prepare for this possibility by paying
11 relatively low and stable premiums which would earn
12 interest over a long time before they were used. The
13 premium and interest would then cover the costs of
14 care.

15 Unfortunately, the long-term care
16 insurance industry made some assumptions in pricing
17 their products that turned out not to be accurate and
18 that's caused many companies to incur deep financial
19 losses on their long-term care policies.

20 That the cost of long-term care
21 insurance is a problem, is borne out by the rate
22 increases that the Insurance Department has approved
23 over the last four years. The Department has approved
24 143 rate increase filings over that time period with
25 an average approved increase of 16 percent. Before us

1 today we have rate increase requests ranging from 13
2 to 130 percent which collectively impact more than
3 46,000 policyholders.

4 Another point which dramatically shows
5 the seriousness of the long-term care insurance
6 problem is that in 2002 slightly over 100 companies
7 were in the long-term care insurance market
8 nationally. The number now is estimated at somewhere
9 around 16, perhaps less. And in fact, one of those,
10 MedAmerica Insurance Company, recently announced that
11 it will no longer be selling long-term care insurance
12 policies. We will also hear from consumers today
13 around Pennsylvania and how the rate increases are
14 impacting them.

15 We also want to hear about some of the
16 options for consumers such as working with their
17 insurers to agree to a reduction in certain types of
18 benefits under their policies in return for either a
19 lowering or elimination of the rate increases. This
20 is a relatively new idea but one I believe holds
21 promise for helping to protect consumers by providing
22 a meaningful, if reduced, level of benefits while
23 containing costs for companies so they can continue to
24 pay the claims of the policyholders.

25 The National Association of Insurance

1 Commissioners estimated in 2012 that approximately
2 288,000 Pennsylvanians had long-term care insurance.
3 This is an important issue for these Pennsylvanians
4 and their families, and I hope to provide them and all
5 Pennsylvanians a better understanding of what is
6 happening in the long-term care insurance market and
7 the Department's role in reviewing rate requests
8 through today's hearing. I'd now like to ask Johanna
9 Fabian-Marks to provide a short presentation on the
10 Department's long-term care rate review process.

11 MS. FABIAN-MARKS:

12 Thank you, Commissioner Miller. As the
13 Commissioner mentioned, I'm going to give an overview
14 of how we review companies' requests to change their
15 long-term care insurance rate. So first I'll talk
16 about our timeline and review process when we get a
17 rate change request.

18 So first, of course, the insurer has to
19 file their request with the Department. Once we get
20 that filing, we publish it in the Pennsylvania
21 Bulletin and on our website. And that kicks off a
22 30-day comment period for the public.

23 After that 30-day public comment period,
24 we have 45 days to review the filing. We usually have
25 questions about the filing so we'll correspond with

1 the company and get those questions answered, and if
2 necessary we can extend that 45 days for review. So
3 that's our timeline and process at a high level.

4 And now I'll talk a little bit about our
5 regulatory authority to review rate increases. So
6 this ---.

7 MR. HAVER:

8 Excuse me. Is it appropriate to ask
9 questions about the presentation?

10 MS. FABIAN-MARKS:

11 I think we're ---.

12 MR. HAVER:

13 Like for example, you said that we say
14 questions and we get answers. My question is, when
15 you talk about transparency, does the public get a
16 right to look at those questions and look at those
17 answers?

18 MS. FABIAN-MARKS:

19 The public gets access to the full
20 filing. And we weren't anticipating we would have a Q
21 and A during our presentation so ---.

22 MR. HAVER:

23 Will you consider that now, because to
24 me that seems like a fairly serious question. If
25 you're sending questions to an insurance company and

1 getting answers, how does the public know what those
2 answers are?

3 MS. FABIAN-MARKS:

4 I appreciate your question, and I'd be
5 happy to follow up with you more to discuss precisely
6 how our correspondence process works after the
7 hearing.

8 MR. HAVER:

9 You're not going to ---.

10 MS. FABIAN-MARKS:

11 Let the rest of people make their
12 presentations. You'll have your time.

13 MR. HAVER:

14 Don't you think everyone should know?

15 MS. FABIAN-MARKS:

16 I would be happy to share that publicly,
17 but right now I'm going to get through my
18 presentation. Thank you.

19 So a little bit about our history of
20 where our authority to regulate long-term care comes
21 from, and where we get the standards that we use when
22 we're looking at long-term care increases.

23 So Pennsylvania enacted its first long-
24 term care regulation in 1995. It was based upon a
25 model developed by the National Association of

1 Insurance Commissioners for NAIC. And this regulation
2 includes many consumer protections that we enforce.
3 And I have listed just a few of those on the slide
4 here. But I'm going to focus on the standards for
5 reviewing rate increases which were in that model
6 regulation.

7 So you'll see this slide is broken into
8 two chunks, pre-2002 and post-2002. And that's
9 because in 2002 we enacted an updated model
10 regulation. But to first talk about those pre-2002
11 policies that are governed by the standards in that
12 1995 model regulation.

13 So under that 1995 model regulation, a
14 rate increase can be justified if a company can
15 demonstrate that their expected claims over the life
16 of the policy would exceed 60 percent of the expected
17 premium. So this means that a company can justify a
18 rate increase if they can show us that for each dollar
19 in premium that they take in, they expect that they're
20 going to pay out more than 60 cents in benefits.

21 Then in 2002, Pennsylvania adopted an
22 updated model regulation that was put together by the
23 NAIC. And this model regulation is known as the rate
24 stability regulation because it was developed in
25 reaction to some of the emerging issues that

1 regulators around the country were seeing with the
2 long-term care market. And it was meant to help to
3 try to address those with products filed going
4 forward. So this updated model regulation encourages
5 insurers to price conservatively.

6 That means it encourages them to build a
7 margin into the initial rates they file so that if
8 things don't turn out quite as the company had
9 anticipated, they won't need to come in for a rate
10 increase because they have some room in their rates.
11 The 2002 model regulation also tweaked the thresholds
12 that were in the prior regulation.

13 So under the 2002 regulation, a company
14 filing for a rate increase had to demonstrate that
15 they expected a 58-percent loss ratio on the initial
16 premium and an 85-percent loss ratio on additional
17 premium collected due to the rate increase.

18 So that means that the company had to
19 show that they were going to spend 58 percent of the
20 premium they had initially planned to collect on
21 benefits, and 85 percent of any additional premium
22 they'd be collecting due to the rate increase on
23 benefits.

24 So I just discussed the last ratio
25 standards that we used to evaluate requests to

1 increase rates. But in addition to just those
2 standards, we also consider several other things when
3 we're looking at these rate filings. So first off,
4 we'll evaluate the reasonableness of company
5 projections.

6 Companies make projections in a number
7 of areas. And I have listed three of those key areas
8 here. First off, companies will project mortality,
9 which is how long a policyholder is expected to live.
10 They'll also project morbidity, which is how healthy
11 policyholders are expected to be. And they'll project
12 lapse rates, which is how likely policyholders are to
13 cancel their policies.

14 So these three projections really
15 influence how much the company anticipates spending on
16 benefits, and in conjunction how much they then need
17 to collect in claims. So we evaluate those for
18 reasonableness. We also look at company solvency.
19 And my colleague, Joe DiMemmo, is going to talk about
20 our regulation of solvency more in a moment.

21 And lastly, but very important to us and
22 always at the forefront of our minds, is the financial
23 impact to consumers. This is really something we take
24 very seriously when we're reviewing these rate
25 increases. And so we look at the history of past rate

1 increases to see what consumers have faced up to now,
2 and if they've already had to deal with rate
3 increases. And we also look at the availability and
4 type of options that the company is offering consumers
5 to limit rate increases by potentially reducing
6 benefits.

7 So that's a quick overview of how we
8 review rate increase requests, and that concludes my
9 presentation. So now I'll turn it over to Joe.

10 MR. DIMEMMO:

11 Yes. My name is Joe DiMemmo. My
12 responsibility with the Insurance Department is to
13 monitor the financial solvency of Pennsylvania
14 domestic insurance companies. We exist to protect ---
15 can you move the slide?

16 Okay. We exist to protect policyholders
17 by ensuring companies are financially strong. Our
18 shared goal is to ensure that insurance claims can be
19 paid when they are due. We regulate companies through
20 licensing, approving corporate transactions, certain
21 transactions that have to have our pre-approval.

22 We analyze company financial reports.
23 If it's a Pennsylvania domestic, we look at quarterly
24 reports and we also analyze annual reports. We
25 require CPA audit reports that attest to the validity

1 of the numbers reported on the annual report, and we
2 require actuarial opinions to opine on the
3 policyholder obligations. And we also conduct onsite
4 examinations of company financial operations once
5 every five years.

6 The examination process sends a group of
7 our folks out to examine the company. We look at key
8 risk areas of the company to identify what controls
9 the company has in place to mitigate those key risks.
10 For long-term care companies, the subject of
11 discussion today, rate adequacy is always an issue
12 that needs to be addressed by the companies. When we
13 examine those companies, we're looking to see what
14 they're doing to try to mitigate that risk and also we
15 have solvency concerns regarding that issue.

16 We coordinate with other states for the
17 monitoring of foreign insurance companies. What I do
18 in Pennsylvania someone else does in Virginia,
19 Alabama, across the country. We all have the
20 interests of the policyholders in mind, and we're all
21 monitoring for solvency. So when there's crossover
22 issues between states, we coordinate them between us.

23 We work with companies to regain
24 financial strength when we identify a company that may
25 be troubled. I identify a troubled company as a

1 company that has financial stress for whatever reason.
2 It may be an asset issue. It may be a liability
3 issue. But it's impacting its surplus and it needs to
4 be addressed.

5 Our Department has the authority to
6 institute additional oversight in monitoring as
7 needed. Generally, if we have a troubled company,
8 we're going to require the company to submit a
9 corrective action plan. The plan has to include
10 specific actions that they're going to take, that
11 they're going to do in order to get back the financial
12 strength. The plan would also include a timeline for
13 that to occur and would have benchmarks for us to
14 measure the progress along the way.

15 Even in the best of the intents in
16 regards to a company pursuing a way to get out of a
17 financial difficulty, sometimes there's nothing that
18 can be done and the company needs to be liquidated.
19 One of my duties as the Deputy Insurance Commissioner
20 is to recommend when those companies can no longer
21 handle ongoing concerns. And we would petition
22 Commonwealth Court for an order of liquidation. The
23 good thing, if there is a good thing about
24 liquidation, is that it's part of the regulatory
25 process.

1 The Insurance Department still oversees
2 it. Policyholders come first before anybody else gets
3 paid in the estate. The guarantee associations are
4 triggered as part of the process. A guarantee
5 association is established by statute. It's a
6 creature of state statutes across the country.

7 When a liquidation occurs, guarantee
8 associations are triggered to pay policyholder claims
9 within limits. Each state establishes its own limit
10 in which it will pay under a policy obligation. Most
11 of them --- and I'm speaking generally --- across the
12 country are around \$300,000, P&C and on the life side.
13 But they step in to pay those claims, and they then
14 seek assets from the estate to reimburse them, or they
15 access the industry to cover the costs of those policy
16 obligations.

17 So even though if a company ultimately
18 ends up in liquidation, policyholders are protected
19 and covered, and they come first in regards to the
20 Department's regulatory scheme.

21 And with that I'm going to conclude.

22 MS. FABIAN-MARKS:

23 Thanks, Joe. And now we're going to
24 hear a presentation from Vincent Bodnar, who is a
25 Chief Actuary with the Long Term Care Group. And he

1 is going to give us a presentation on financing of
2 long-term care insurance.

3 MR. BODNAR:

4 Thanks, Johanna. As Johanna said I'm
5 Chief Actuary of the Long Term Care Group. But I am
6 also --- I'm here really on behalf of --- in my role
7 as the chairperson of the Long Term Care Section of
8 the Society of Actuaries. So I'm here really in an
9 educational nature to present certain concepts that
10 relate to long-term care.

11 So I'm going to go over --- I'm going to
12 give you a basic explanation of long-term care as a
13 product. It has some very unique product features and
14 pricing that make this very much a challenge to price
15 and also contributes to a need for rate increases. If
16 experience deviates from what was expected, there's
17 --- because of the pricing mechanics and the funding
18 of claims which is much a pre-funded element, the
19 companies have to establish reserves.

20 So I'll talk about what causes that to
21 happen. And then I'll also talk about, you know,
22 premium rate increases, what causes that and how the
23 timing of when experience deviations will affect the
24 amount of a premium rate increase.

25 This is a very simple explanation. It's

1 meant for a non-technical audience. If I was
2 presenting to an audience of actuaries, I would use
3 all kinds of terminology that nobody would understand.
4 So hopefully you all will be able to follow along.
5 I'm going to use some very simple parallel examples.

6 So as far as the product goes, long-term
7 care is an insurance product that pays out when
8 somebody becomes disabled. And by disabled, we
9 typically mean in most insurance policies that a
10 person is unable to perform two out of what we call
11 the six activities of daily living. And examples of
12 this would be eating, transferring, bathing.

13 There's a total of six, and in general
14 if a person cannot perform two of these without some
15 kind of supervision, they're considered to be
16 disabled. Many policies will also require that people
17 are receiving services. In addition to being
18 disabled, they must be receiving some kind of
19 long-term care in a predefined setting such as your
20 home, which is home healthcare, assisted living
21 facilities or in a nursing home.

22 Benefits are not paid as a lump sum. So
23 if you become disabled, the insurance company doesn't
24 just write the claimant a check for some lump sum.
25 It's paid out as a daily benefit for every day that

1 you're disabled. And it's usually to cover your
2 services up to a certain maximum daily benefit.

3 There are policies that will just pay a
4 daily benefit for each day that you're disabled, but
5 usually it's to cover your expenses up to a maximum
6 amount per day. And there's usually a limit on how
7 much will be paid out over a person's lifetime. Some
8 policies are unlimited, other policies will stop
9 making payments after a period of, say, two years or
10 three years or four years. And many policies require
11 the person to be disabled for a certain period of time
12 before they begin to pay.

13 And this is called the elimination
14 period. These are typically 90 days. And by law,
15 policies must provide coverage to the insured for
16 their entire life. So these are lifetime guaranteed
17 renewable products. The insurance company cannot
18 cancel them. And so because they're meant to insure
19 the claimant or the policyholder for their entire
20 life, most of the policies are --- policies are
21 required to be offered with some kind of inflation
22 protection benefit so the insured has the option at
23 the point when the policy is issued to increase their
24 benefits automatically every year for the duration of
25 the policy.

1 And that was meant to keep up with the
2 cost of care. The chance of using benefits is quite
3 dynamic, and it also presents challenges for actuaries
4 when they price the products. In general, people have
5 a lower chance of using their long-term care benefits
6 when they're married. And that's because typically a
7 healthy spouse will take care of a disabled spouse
8 informally and will not trigger a long-term care
9 policy, and also right after a policy is issued.

10 Insurance companies will underwrite the
11 policy, usually using quite strict underwriting,
12 particularly these days. And so generally your chance
13 of using long-term care initially is quite low. This
14 changes though. People will have a higher chance of
15 using their long-term care benefits once they get into
16 a situation where they're living alone.

17 So they might start off as a married
18 couple but later on during the policy they may be
19 living alone. That increases their chance of needing
20 long-term care, formal long-term care services. And
21 also, as you get older, the chance of needing long-
22 term care as an 82-year-old is much greater than the
23 chance of needing long-term care when you're a 55-
24 year-old.

25 And so these factors all create this

1 dynamic where over time the chance of needing long-
2 term care greatly increases after a policy is issued.
3 So in the beginning of a policy lifetime, the chance
4 is almost zero. But further out, many, many years
5 later, decades later, the chances are very great.

6 And so this is what we call pre-funding.
7 So the premiums are --- really, the same laws that
8 require the policies to be enforced for a person's
9 lifetime also require premiums to be expected to be
10 level for a person's lifetime. So it can't go up by
11 attained age. The rate is set when the policy is
12 issued.

13 And so that's a level amount and that
14 gets sent against a claim cost. So these are the
15 expected claims, the red line that increases
16 dramatically, as I mentioned on the prior slide, over
17 time. And so this creates a cash flow mismatch for
18 insurers.

19 During the early part of a policy the
20 insurance company will put away some of the premiums
21 into a reserve. So while claims are lower than
22 premiums, insurance companies are funding a reserve.
23 That's used later on when that claim curve comes above
24 premiums. And at that point the reserve fund is
25 released to pay the claims. So you've got a lot of

1 cash coming in, in the beginning. That's put away in
2 a reserve to pay the cash that needs to be paid out
3 later on.

4 And so not all of the premium is
5 generally set aside in that early part of a policy.
6 The premium dollar is really divided into different
7 pieces. So an insurance company will take part of the
8 premium to pay for the cost of administering the
9 policy. And this is the cost of collecting premiums
10 and running the insurance company.

11 It also will take some of the premium
12 away to pay agent commissions and it will take some of
13 the premium to pay for state and federal taxes. It
14 will take some as distribution of profit to
15 shareholders. But the vast majority of the dollar is
16 set aside to fund these future benefits. In actuarial
17 literature, we call this the net premium, so this is
18 what's left over after these other components of the
19 premium dollar are carved out.

20 And so one easy way to think about this
21 reserve account is that it behaves an awful lot like a
22 savings account. And these net premiums are really
23 deposits that get put into this savings account early
24 on, and then at the end when benefits are paid out,
25 these are the withdrawals from the savings account.

1 And just like a savings account, this
2 reserve fund earns interest. However, the savings
3 account is really --- the best way to think of it is
4 as a communal account. It's there for the benefit of
5 all the policyholders, not any single policyholder.
6 It can only be used to pay benefits for those people
7 who become disabled. And it's not paid to people who
8 die without using their benefits, and it's not paid
9 out to people who decide to cancel their policies.
10 The money, the reserve fund, stays there for the
11 benefit of everybody who has kept their policies and
12 may need to withdraw it for benefits.

13 And so if you think of it as a savings
14 account you can think of the net premiums as a
15 scheduled deposit plan. And this scheduled deposit
16 amount is calculated based on how much the actuary
17 thinks will need to be withdrawn in the future. And
18 the amount that needs to be withdrawn is based on a
19 few things which we'll get into next, and also the
20 interest rate that will be earned.

21 So these two things are used to
22 determine what the payment schedule will be or your
23 premium amounts. If either one of these are off,
24 there may not be enough in the savings account to pay
25 for the benefits later on. And I'll talk about some

1 of the things that can go wrong and some of the things
2 that have gone wrong with this product.

3 First of all, the interest rates.
4 Interest rates can change if the economy changes. And
5 certainly the economic conditions of the last 20 years
6 have caused interest rates to decline dramatically.
7 When products were priced in the early to mid 1990s,
8 interest rates were assumed to be six to eight percent
9 because that's what they were at the time. Nobody at
10 that time could foresee that interest rates would drop
11 to where they are today. And currently they're about
12 three to four percent. So the interest rates have
13 dropped so much that there's not enough in the savings
14 account to pay benefits right now.

15 So the other thing that can affect a
16 need for the funds to be depleted is that there's just
17 the amount that you expect to be withdrawn is more
18 than you thought it was going to be. And that's
19 driven by three key things.

20 And the first is just simply if there's
21 more people around in later durations that have kept
22 their insurance policies. So if at the beginning of
23 an insurance policy, an actuary in this example
24 assumes that there are 20 people that are issued a
25 policy. And early on, nobody is being paid a benefit

1 because of underwriting. But later on, in a later
2 year, the chance of needing benefits is three out of
3 nine. There's nine people left with their policy and
4 three go on claim, that's a one in three chance of
5 triggering your policy and using benefits.

6 However, if in reality, out of those 20
7 people you have 12 left and you, again, have that ---
8 and if everything plays out as who you think will need
9 benefits is correct, now that one in three chance
10 means that there will be four people going on claim.

11 You'll have 12 people paying premiums,
12 you'll have 12 people in force and four people go on
13 claim. That creates an imbalance. Although you have
14 the extra three people around to pay the premium, it's
15 not enough. You needed to collect more premium from
16 all 20 people at the beginning of the policy.

17 And what we've seen in the industry is
18 that more people have kept their policy than
19 originally expected. Originally, original pricing
20 assumptions were that ultimately in general about four
21 to five percent of people would voluntarily cancel
22 their policies every year. And that's turned out to
23 be virtually zero.

24 And so in other words, everybody is
25 keeping their insurance policies. And we're also

1 seeing that people are living much longer than we
2 expected. And so we call this the mortality rate.
3 The mortality rates on these products have been much,
4 much lower than anybody had anticipated. So there are
5 more people with these policies in later years than we
6 had thought.

7 The other thing is if the number of
8 people who use the benefits is greater than was
9 originally anticipated. So even if in that prior
10 example where the actuary had assumed one out of three
11 people would use benefits, if that turns out to be
12 another, greater amount, say five out of nine people,
13 then again there would be more withdrawals from the
14 account than was expected.

15 And in general in the industry this has
16 been mixed. Some companies have not had this happen,
17 other companies have. So this has been mixed across
18 the industry.

19 And the third thing that can cause the
20 withdrawals from this account to exceed expectations
21 is just the amount that's paid out to people who do go
22 on claims. So if you remember, it's not a lump sum
23 that's paid to you when you go on claim. Instead it's
24 some amount that is not known in advance. So when
25 someone goes on claim, we don't know how much is going

1 to be paid out to them. It really is dependant on the
2 number of days that they're going to be disabled and
3 in a lot of cases where they're receiving the care and
4 how much that care will be as far as cost. And so we
5 don't know what that's going to be. It's instead
6 based on past observations, what's happened
7 historically.

8 And in the early days, most of the
9 experience that actuaries had was really focused on
10 skilled nursing facilities. And the amount of time
11 that people spend in skilled nursing facilities hasn't
12 really changed in the last 30 years. But what we have
13 seen is that people are beginning to receive care in
14 other places.

15 So we've seen a rise of assisted living
16 facilities in the last 25 years. And more people are
17 receiving care in assisted living facilities when they
18 need facility care. Although it's cheaper every day,
19 people are living much longer in these assisted living
20 facilities. And it's causing claims to be longer and
21 more expensive than insurance companies first thought
22 they would be.

23 So now I'll get into what happens when
24 the estimates are not what people realized. And I'm
25 going to use a simple example of a savings plan. And

1 I'm going to take interest out of the equation just to
2 keep it very simple. If you start off with a goal of
3 saving \$10,000 over a period of ten years, well, a
4 good savings plan would be to save \$1,000 a year.

5 And so in this graph, the bright red
6 portion of every bar is the \$1,000 that you're putting
7 into the savings account, and the darker color is what
8 had accumulated prior to putting that in. So you'll
9 see under this plan in ten years, you save \$10,000.

10 But what happens if you're going along
11 and you're putting your \$1,000 a year away, and then
12 at the end of the 6th year you realize that you don't
13 need \$10,000, you're going to need \$12,000? Well,
14 your goal just increased by \$2,000, and you've only
15 got four funding years left.

16 And so now you've got to take that
17 additional \$2,000, divide that by four because you
18 have four years to make that up. And it's an
19 additional \$500 per year. And so that's 50 percent
20 more than you had been saving. And so now you have
21 what I call a catch-up deposit. And so in addition to
22 the \$1,000 that you had been putting aside, you need
23 another \$500 per year. And only through that will you
24 get this \$12,000.

25 And so another way to look at this is if

1 you could get in the time machine and go back to the
2 first year that you set your plan up. If you had
3 known from the beginning that you needed \$12,000, you
4 would have put \$1,200 aside every year, \$12,000
5 divided by ten is \$1,200. That's only 20 percent more
6 than the \$1,000.

7 And so if you'll remember from the other
8 slide, if you find out in the sixth year that you
9 needed \$12,000 ultimately, well, you needed to
10 increase your deposit by 50 percent. But if you had
11 known from the beginning, you would have only needed
12 to increase your deposit by 20 percent.

13 And so this was really meant to
14 illustrate that when you find out when you need to
15 increase your savings goal is very important. And the
16 analogy here is that in the long-term care insurance
17 space, you know, many insurance companies are finding
18 that they need to increase their savings goal and it's
19 usually halfway through or more than halfway through
20 the life of a policy.

21 So that makes the increases that they
22 need higher than they would have been if they had
23 known everything from the beginning. And so now I'll
24 just shift to how things should work in a long-term
25 care product. So in general, at any given time ---

1 and I'll show a model here. On the left side --- and
2 I've depicted this as a balance, as a scale, really.
3 And this scale needs to be kept in balance. On the
4 left side, you have the amount in your savings account
5 or your reserve fund. And in addition to that, you
6 have the future net premiums that you expect to
7 collect from the policyholders.

8 That has to be the same as what you
9 expect to pay out in future benefits. And so at any
10 given time in an insurance product's life this balance
11 has to be kept. But it can get out of balance if for
12 some reason the future benefits become more than you
13 had expected they would be. And so in this depiction
14 you have the same reserve fund, the same future net
15 premiums but now your future benefits have grown and
16 you're out of balance.

17 If this continues there will not be
18 enough money in the fund to pay future benefits. And
19 so it can be restored through premium rate increases.
20 That's one way to try to restore this. So in this
21 picture we have, you know, the same future benefits,
22 reserve fund and future net premiums. But in this
23 case, a premium rate increase has been requested and
24 has been granted. That's enough to restore the
25 balance.

1 So that's one way that the balance can
2 be restored. And in general, when this happens, by
3 the way, when insurance companies realize that they
4 need to implement a rate increase, in general these
5 days they've also determined that they're probably not
6 going to be able to realize any future profits out of
7 the business. If you remember that premium dollar,
8 there was a sliver for distributions to shareholders.
9 That usually stops at this point for a product that
10 needs a rate increase.

11 If you can't get the premium --- if you
12 cannot restore balance using a premium rate increase
13 --- and this will happen if the premium rate increase
14 that's been requested is insufficient to restore the
15 balance --- the funds have to come from other sources.
16 And there's really only --- an insurance company
17 doesn't generally have access to creating money. They
18 can't print the money so it has to come from
19 someplace.

20 And these are one of two places. It
21 either has to come out of their surplus, so they'll
22 take a one-time deposit, they'll take it out of the
23 surplus which was created by the other policyholders,
24 and it's there for the benefit of those other
25 policyholders or the shareholders. It'll have to take

1 some of the surplus and put some into this fund.

2 If it doesn't do that it can also, going
3 forward, charge other policyholders more money. We
4 call that a subsidy to help the future losses of the
5 block.

6 And so that concludes my part of the
7 presentation. Hopefully that was helpful.

8 MS. FABIAN-MARKS:

9 Thank you. That was very educational.
10 And we appreciate your joining us at the hearing
11 today. Now, I think Jim is going to come up and join
12 us at the front. Jim is an actuary with the
13 Department that the Commissioner mentioned.

14 And we're going to move onto the portion
15 of the hearing where we hear from companies that have
16 filed increases with the Department recently. We have
17 about ten minutes for each company. And the company
18 representative will first discuss their filing and
19 then Commissioner Miller, Jim or I will ask some
20 questions of the Company.

21 So first we're going to hear from
22 Genworth. We have two representatives from Genworth
23 here today. We have the President and CEO, Tom
24 McInerney. He's with the Genworth Life Insurance
25 Company. And we also have Elena Edwards, the senior

1 Vice President for long-term care with Genworth
2 Financial. And I'll just note quickly here that Mr.
3 McInerney rearranged his schedule to be here today,
4 which we appreciate. Depending on how long the
5 hearing runs, he may have to leave a little early but
6 Ms. Edwards will be here for the duration to represent
7 Genworth. So I just want to note that for the
8 audience.

9 MR. MCINERNEY:

10 Thank you very much. And we're pleased
11 to be here on behalf of Genworth. And I'd like to
12 express our appreciation to the Department and
13 Commissioner Miller for holding today's hearing and
14 for giving us a chance to participate.

15 I'd also like to thank all of you, all
16 of the consumers who are here today, and also who are
17 watching from various sites around the state. We
18 certainly understand how difficult these large premium
19 increases are for our customers, and we work hard to
20 explain their options to them. And that's a big part
21 of the reason why Elena and I are here today.

22 During my remarks today, I want to talk
23 about why Genworth is seeking these large long-term
24 care premium increases. I'll also touch on the value
25 of long-term care insurance, even with these large

1 premium increases. And also explain what options
2 policyholders have to either take the premium increase
3 or work out some other arrangement with us.

4 So why are we seeking these large
5 premium increases? And I would also say that I think
6 Vince gave you a very good description of how the
7 economics of these policies work. And I'll touch a
8 little bit on and just reinforce some of the things he
9 had to say in his presentation.

10 So Genworth has three series of older
11 generation policies that are particularly challenged.
12 Most of these policies were written or issued between
13 1974 and the early 2000s. We are seeking to
14 actuarially justify premium increases so that these
15 very unprofitable policies have a premium screen that
16 is sufficient to pay the claims, much like what Vince
17 talked about earlier.

18 We also have requested a premium
19 increase for one series of newer generation policies.
20 And our objective with that premium increase, we are
21 expecting now that claims will be higher than we
22 thought. And we also have experienced a much lower
23 policy termination or lapses, as I think Vince called
24 it, than we expected.

25 We have already absorbed substantial

1 losses on this group of policies issued between 1974
2 and 2002. From 2009 through the end of 2014, Genworth
3 has lost in excess of \$2 billion collectively on all
4 these policies taken as a whole. Even after including
5 all rate actions currently approved and those that are
6 still planned, we expect losses to continue to be
7 substantial, several hundred millions per year, and we
8 expect that to occur for several more years.

9 We have agreed with Pennsylvania and
10 other regulators around the country that we will never
11 recover any of those losses on the three older
12 generations of policies, so for Genworth we view those
13 \$2 billion of losses --- and those losses are growing
14 each year --- to be sunk costs for our company. And
15 we've used our surplus funds, as Vince explained, to
16 cover those.

17 The premium rate increases on the older
18 generation policies help us to reduce future losses on
19 those policies. And our ultimate goal over time is to
20 bring those policies closer to break even going
21 forward so we eventually get the annual losses close
22 to zero. But that also means that we have locked in
23 the \$2 billion of losses and whatever losses we
24 continue to experience until we get it to break even.

25 Genworth has received significant

1 increases in the past few years. It varies by state.
2 And they've helped us reduce these ongoing losses but
3 they have not been enough and our losses continue to
4 be large and continue to grow.

5 As Vince described, long-term care
6 insurance is guaranteed renewable, which means that as
7 long as the policyholder pays the premium the carrier
8 cannot cancel or change the policy terms. The only
9 way an insurance company can manage the risks
10 associated with a guaranteed renewal policy is to
11 adjust premium rates when necessary as experience
12 emerges.

13 I think Vince also described very well
14 with his graphics the fact that if you find out much
15 later, years and years, 10 or 20 years into a policy's
16 life, the amount of premium increase you need to
17 recover is much larger.

18 And I just want to give you a different
19 way to look at it, but I think Vince's presentation
20 showed it very well. A five percent required
21 increase, if we implement it today, to ensure that a
22 policy is adequately funded, if we waited or we didn't
23 know for 20 years that we needed the five percent
24 increase in order to get to the same actuarially
25 equivalent basis, instead of five percent we would

1 need 80 percent.

2 And if a company waited 25 years for the
3 premium increase, we would need a 160-percent
4 increase. We are applying for very large premium
5 increases in large part because actuarially it's been
6 only recently that we've become aware because of much
7 lower interest rates, much higher costs, many more
8 people claiming that we needed much higher premium
9 increases.

10 And just the way that we look at it is
11 for every five years that you wait to seek a premium
12 increase to get back in line on that savings account
13 to refer to --- for every five years the amount of
14 increase you need doubles.

15 I wanted to note that we cannot change
16 premium rates for specific policyholders because of
17 their individual health or other circumstances. We
18 are permitted under state regulations and subject to
19 Insurance Department approval to receive premium rate
20 increases that are actuarially justified but on the
21 overall class of policies taken as a whole.

22 There is no doubt that private long-term
23 care insurance helps to filter a huge financial burden
24 for our customers, and it reduces the risk that
25 taxpayers will pay much higher future taxes for

1 Medicaid. Pennsylvania's Medicaid plan is the payer
2 of last resort for Pennsylvanians who do not have
3 private long-term care insurance or adequate financial
4 assets to play for the claims themselves.

5 These policies offer tremendous value to
6 policyholders even after significant premium
7 increases. Our policyholders generally have access to
8 long-term care benefits that are many multiples of the
9 premiums they have paid and will pay in the future.
10 With the cost of a private nursing home room now
11 averaging approximately \$250 per day across America
12 and over \$300 per day in Pennsylvania, it's fair to
13 say that the cost of care almost always will greatly
14 outweigh the cost of insurance and premiums paid many
15 times over.

16 Genworth has paid over 200,000 claims in
17 the last 40 years, totaling approximately \$12 billion.
18 In Pennsylvania, over that same period of time
19 Genworth has paid approximately \$655 million in
20 insurance benefits to approximately 10,800
21 Pennsylvanians.

22 In 2015 Genworth, paid approximately
23 2,300 claims on behalf of Pennsylvanians totaling over
24 \$70 million of benefits. Our claimants and their
25 families express gratitude every day for the value of

1 their policies and services, particularly when they go
2 on claim. We need the premium increases we have
3 requested on our older products to help ensure that
4 Genworth can continue to pay all of our long-term care
5 insurance claims as they arise.

6 Now we understand that large premium
7 increases are a significant burden to our
8 policyholders because we talk to our customers every
9 day. In fact, almost 200,000 policyholders all around
10 the country, including in Pennsylvania, have called us
11 to discuss their premium rate increases over the last
12 two years. We always welcome the opportunity to share
13 information with our policyholders about the need for
14 the premium increases, and it's also why we're here
15 today.

16 We currently offer policyholders subject
17 to premium rate increases a number of different
18 options. And our customer service representatives in
19 Virginia, which is our home base, and other locations
20 are ready and willing to help each of them understand
21 their options so they can determine the best course of
22 action in their individual situations. Our policies
23 have three basic options which they can choose.

24 First, they can agree to pay the full
25 amount of the premium rate increase that's been

1 approved by the Insurance Department. And if they do
2 that, that will maintain their coverage and their
3 benefits at currently levels. They can also make
4 custom changes in their benefits, generally reducing
5 their benefits in lieu of instead of paying the higher
6 premiums. And so ultimately we think this allows them
7 to find the right balance between affordability and
8 the amount of protection they want in the future.

9 And finally, on a voluntary basis, this
10 is something that is not required by most of the
11 policies, but we have agreed that when policyholders
12 no longer can afford to pay any premiums or don't want
13 to continue their policies, we voluntarily agree to
14 what's --- in the insurance lingo is called a
15 nonforfeiture option.

16 What that really means is whatever they
17 pay in premiums to date, we give them a paid-up
18 policy. And the paid-up policy we will agree to pay
19 claims equal to the amount of premiums that they've
20 paid in under their policy.

21 So in effect, they don't lose any of the
22 premiums that they've paid in. From our overall
23 nationwide experience on all of the rate increases
24 we've implemented in the last four years between 2012
25 and February of 2016, we have seen that approximately

1 86 percent of our policyholders pay the full amount of
2 the increase, approximately eight percent take a
3 reduced benefit and approximately six percent take
4 that paid-up policy feature that we voluntarily offer.

5 So in conclusion, I want to say that
6 Genworth recognizes and respects that this situation
7 requires a balance of interests of many different
8 stakeholders. We're committed to work with
9 Commissioner Miller and the Insurance Department in
10 Pennsylvania to implement actuarially justified rate
11 increases in a reasonable and responsible manner,
12 keeping consumer interests and concerns top of mind.

13 Commissioner Miller, I want to thank you
14 and your staff and everyone else for the opportunity
15 for us to be heard today. Again, I express my thanks
16 to all of those participating, all those consumers or
17 policyholders participating. And Elena and I would be
18 happy to answer questions that any of you have.

19 COMMISSIONER:

20 Thank you so much for being here. I
21 appreciate it. And again, thank you for changing your
22 schedule so you could make this work. I do have a
23 couple questions for you. As you can imagine, when
24 the announcement came out about this rate increase we
25 started hearing from a number of policyholders

1 concerned about the impacts, as you can appreciate.
2 And one of the --- and some of the concerns we heard
3 from policyholders related to concerns that Genworth
4 might be seeking these large long-term care rate
5 increases to make up for losses in other lines of
6 business, which I hadn't necessarily heard that
7 concern elsewhere. But can you address that concern?

8 MR. MCINERNEY:

9 Sure, Commissioner. First of all, our
10 long-term care insurance policies are generally in one
11 company. We have many subsidiaries, but we have them
12 in one subsidiary. As I mentioned in my remarks,
13 through the end of 2014, we had lost \$2 billion of
14 losses in that company. And we put surplus in. And
15 we also view that \$2 billion of loss --- and we're
16 losing several \$100 million each year. So that
17 \$2 billion will grow over time.

18 We view that as a sunk cost. So not
19 only are we not trying to use these premium increases
20 to cover other policies, we're not even trying to get
21 that \$2 billion loss. We're just trying to get the
22 policies from losing hundreds of millions per year
23 each year going forward, closer to break even.

24 COMMISSIONER:

25 Thank you. The current rate filing

1 notes that consistent with Genworth Life Insurance
2 Company's 2014 asset adequacy testing, we anticipate
3 future rate increase requests of similar magnitude.
4 Is that accurate?

5 MS. EDWARDS:

6 Yeah. Commissioner, that is accurate.
7 We do expect on the three older generation policies
8 that we'll be looking for significant rate increases
9 in the future as we go forward, and that's again to
10 get those blocks, as Tom mentioned earlier, to break
11 even over the next several years.

12 On the one series of the newer
13 generation policies, we'll also look to seek
14 significant rate increases because as we're watching
15 our projected claims experience emerge, we're seeing
16 that come in higher than expected and certainly the
17 lapse rates are lower than expected.

18 COMMISSIONER:

19 So can you talk about why you didn't
20 come in with everything you think you're going to need
21 all at once versus coming it at different times?

22 MR. MCINERNEY:

23 You know, I think these policies will be
24 enforced for 20, 30 or 40 years. The reason for these
25 large losses --- and I think Vince did a great job

1 explaining that --- is because many more policyholders
2 than we thought maintained their policies. I think
3 that's because they realized what a great deal they
4 have and how much the benefits are. And so they hold
5 them and it's more than was calculated back when we
6 started 20, 30 years ago.

7 Clearly, no one anticipated the great
8 recession that we had in the mid 2000s. And it's been
9 said --- you know, I think in our case like most
10 insurance companies we invest the premiums and the
11 reserves are invested in high quality government
12 bonds, treasury bonds, state, municipal bonds and
13 corporate bonds. And we assumed, up until the crisis,
14 it was generally holding true that we'd earn somewhere
15 between six and eight percent interest. And for those
16 of you who have CDs and other savings, you know that
17 no one is earning that today.

18 In our case because these are very long
19 liabilities, we invest them in long-term bonds. I
20 believe those bonds are only around four percent today
21 versus the six or eight percent. Now, it could be
22 that --- you know, I don't expect Janet Yellen and the
23 Federal Reserve to raise rates any time soon. But if
24 they do raise rates, it is possible that we would
25 begin to earn more on the reserve funding and

1 therefore would not need as much of an increase.

2 I'm not predicting that's the case. I
3 actually think rates will be low for a long time.
4 Also, we could see --- I don't expect this either ---
5 that Vince is right. Our actual lapse rates or
6 policyholders who no longer keep their policy in
7 force, we, like the industry --- and it's pretty
8 typical in insurance, that around five percent of
9 policyholders do lapse for whatever reason. They have
10 other needs. They no longer desire to pay the
11 premiums in our case, I think, because of the richness
12 of the benefits, how high the benefits are that we've
13 provided, particularly in these old policies. In many
14 cases they're lifetime benefits. They don't have a
15 limit. And so the lapse rate has been well under one
16 percent versus five percent. Now that could change.
17 I don't expect it to change. It could change. We
18 could find that more people turn in their policies.
19 If that is the case, again, we would not need
20 premiums. So we try to balance.

21 Again, we're not trying to recover the
22 losses we've had. We're not trying to make money on
23 these old policies going forward. We're just trying
24 to get them to break even. So I do think,
25 unfortunately, we probably aren't going to see

1 interest rates go up or lapses go down, so we probably
2 will, as Elena said, need to seek future increases.
3 But we're looking at those increases and we'll look
4 over the next five or ten years to see if, in fact, we
5 really need the additional increases.

6 COMMISSIONER:

7 Okay. Will you be communicating that
8 message to policyholders that you potentially
9 anticipate seeking future significant increases as
10 well?

11 MR. MCINERNEY:

12 We do. And we give policyholders 60
13 days' notice and then a 30-day grace period. But
14 Elena really designed our system, and she oversaw our
15 long-term care policyholder communications for a long
16 time. So Elena, you may just want to comment on the
17 letters and the type of letters and the phone calls we
18 have with our policyholders ---

19 MS. EDWARDS:

20 Sure.

21 MR. MCINERNEY:

22 --- including in Pennsylvania.

23 MS. EDWARDS:

24 Sure, Tom. Thanks. Yeah. We
25 definitely --- we've set up a separate customer

1 service team to answer those specific questions from
2 policyholders on purpose. That's what their job is
3 all day, every day, is to take those calls and explain
4 to policyholders what their options are so it's
5 clearer. We do provide 60 days notice before their
6 billing period to policyholders who are being impacted
7 by a rate increase, and then another 31-day grace
8 period afterwards. And we've found that that 90, 91
9 days seems to be sufficient over the years for
10 policyholders to make those decisions. We do notify
11 them and will continue to do so as the rate increase
12 gets approved.

13 COMMISSIONER:

14 Thank you. I know in the interests of
15 time, we need to move on. We've got other companies
16 to hear from and consumers to hear from, but thank you
17 very much for being here.

18 MR. MCINERNEY:

19 Thank you very much.

20 COMMISSIONER:

21 I appreciate it.

22 MR. MCINERNEY:

23 Thank you, every one.

24 MS. EDWARDS:

25 Thanks.

1 MS. FABIAN-MARKS:

2 Yes. Thank you. And now we're going to
3 hear from Unum Life Insurance Company. Steve Zabel,
4 the president of the closed block operations for Unum
5 Group is here to discuss their recent filing with the
6 Department.

7 MR. ZABEL:

8 Great. Thank you. And thanks for
9 inviting us here today. A very important topic and I
10 appreciate the partnership. So good morning. My name
11 is Steve Zabel. I'm the president of Unum Group's
12 closed block operations. And that operation is
13 comprised --- it is one of Unum's four main business
14 segments and includes those products that we no longer
15 market, but we do actively service by the company.

16 Long-term care comprises about half of
17 the premiums for that business operation. It's about
18 a \$600 million business operation. The vast majority
19 of Unum's long-term care policies were issued between
20 1989 and 2012, and include over one million insureds
21 currently. We take very seriously our commitment to
22 providing service to our current policyholders, and we
23 have a team of more than 150 professionals who both
24 adjudicate claims and pay benefits to our
25 policyholders, as well as provide customer service

1 which is very important in these types of situations.

2 We do have a dedicated customer service
3 team. They field calls, answer questions on these
4 types of increases. They also provide different
5 options to the policyholders that may help to mitigate
6 those increases. Last year we paid over \$370 million
7 in benefits which we believe reflects the value of
8 these policies to consumers.

9 Unum determined the prices for its
10 long-term care business using the best data available
11 at the time, pricing and applying assumptions and
12 predictions about how future experience would develop.
13 Unfortunately, us, like many in the industry, our
14 actual experience in the years or really even decades
15 since we issued the policies has turned out to be
16 significantly different than those original actuarial
17 assumptions used to set those original premiums.

18 Individuals covered under the policies
19 are both living longer and hold onto their coverage
20 longer than anticipated, similar to what Vince
21 described earlier, which has led to more claims being
22 made. Once our claim insureds are all sustained on
23 claim longer than we had assumed, and at the same time
24 investment earnings, which are used to support the
25 payment of claims, continue to be significantly lower

1 than anticipated given the overall sustained lower
2 interest rate environment.

3 As a result, Unum has lost significant
4 amounts of money annually for the reasons that you
5 heard earlier. These losses had and will continue to
6 have significant adverse impacts on our operating
7 companies which have also written and continue to
8 write other lines of business including disability,
9 life, dental and vision, mostly in the group insurance
10 space.

11 One of the steps we have taken at Unum
12 to decrease the financial risk posed by our long-term
13 care block of business is to file premium rate
14 increases as allowed under the contracts and the law.
15 Although we understand the significance of these filed
16 increases, we have tried to file timely rate increases
17 as soon as our experience deviations became credible.
18 And you know, as described earlier, that can take
19 decades for that information to actually become
20 credible in order to support the rate increases being
21 filed. We tried to strike a balance by filing
22 increases that are only 24 percent of those that would
23 actuarially justified. Under the formula as written,
24 you'd be able to actually recoup potentially some of
25 the past losses.

1 We have only filed 24 percent of those
2 actuarially justified because we are trying to strike
3 that balance between the consumer and, really, the
4 company. Unum's goal in seeking rate increases is not
5 to restore the financial performance of the block to
6 our expected profitability at the time of pricing. In
7 fact, we will still experience losses on these blocks
8 subsequent to the filed increases. And we will also
9 not recoup any of the losses we have experienced.

10 We believe that our responsibility is
11 really twofold regarding this difficult issue. First
12 and foremost, we need to live up to our contractual
13 obligation to consumers and provide the benefits to
14 policyholders at their time of need. We take that
15 very serious. Second, we must manage all of our
16 insurance products to ensure the financial stability
17 of our companies for all of our policyholders and not
18 just our long-term care policyholders. We manage the
19 stability for both the short-term horizon as well as
20 the long-term sustainability. This is important for
21 not just our long-term care insurance policyholders
22 but for all of Unum's policyholders. With all that
23 said, we recognize that the rate increase amounts we
24 are seeking are significant and they present many of
25 our consumers with a substantial challenge to maintain

1 their coverage.

2 So for each of our customers faced with
3 an individual long-term care rate increase like those
4 currently under consideration here in Pennsylvania, we
5 have developed and proposed to offer a coverage change
6 option that was not part of our original contract as
7 filed during pricing. Simply put, this option allows
8 the policyholders who have lifetime inflation benefit
9 increases in their policies to avoid the entire rate
10 increase by adjusting their go-forward benefit
11 inflation rate from five percent to three percent.
12 Note that all benefits accumulated in the past at five
13 percent will be maintained. Given the current low
14 inflationary environment for those services covered
15 under our policies we believe that the five percent
16 benefit inflation accrued plus the three percent going
17 forward continues to provide a very valuable coverage
18 to our consumers.

19 Also, our proposed rate increase would
20 leave in place the current premiums for individuals
21 whose coverages actually do not include lifetime
22 inflation benefit increases. This new benefit
23 coverage option is included in our pending filing with
24 Pennsylvania. It has been approved already in 35
25 other states. Although it is still very early in the

1 implementation process, we have seen very high
2 election of this reduced inflation option for those
3 states where it's been implemented to date.

4 It's also important to remember that
5 people continue to have the option at any time to
6 adjust other benefit features on a go-forward basis as
7 defined within the contract and will have their
8 premiums adjust prospectively for those new, lower
9 levels of coverage. These options include things like
10 reducing the benefit period from lifetime, say, to a
11 three year or a six year benefit as well as adjusting
12 the daily benefit levels provided.

13 In conjunction with all of Unum's
14 premium increase filings, we also provide the
15 policyholder the ability to take a non-forfeiture
16 option. That was also described earlier, most
17 carriers are doing that, whereby they no longer pay
18 premiums going forward and can receive a benefit if
19 they are claim eligible that's equal to the cumulative
20 premiums paid in the policy historically. We believe
21 no policyholder should lapse their policies as a
22 result of a rate increase and believe we offer
23 reasonable alternatives at various levels of
24 affordability. We also make outbound calls any time
25 we do just get a surrender of the policy, really to

1 make sure that the consumer understands all the
2 options, one of which is to have the paid up policy
3 going forward.

4 In closing we acknowledge how difficult
5 rate increases can be for our policyholders. We will
6 continue to provide alternatives to manage
7 affordability for our consumers and will stay vigilant
8 in providing quality service during the life of the
9 policy, most importantly, at the time of claim. I
10 want to thank the Commissioner for inviting us here
11 today. It's a very important topic for us, it's a
12 very important topic for the industry, and I think the
13 transparency is very good for the process. And we
14 will continue to support both the Department and
15 consumers, as we can, going forward. Thank you.
16 Thank you, Commissioner.

17 MS. FABIAN-MARKS:

18 And thank you. We appreciate the
19 information you conveyed there. You mentioned that
20 there's a high election rate for policyholders who are
21 offered the option to reduce their inflation
22 protection in order to avoid the rate increase. Do
23 you have a percent on average that you've been seeing
24 in other states with policyholders who take that up?

25 MR. ZABEL:

1 Yeah. So just as a little perspective,
2 we began implementing in November of last year. When
3 you work through the communication process and
4 notification process --- in it's very early days so
5 the credibility is fairly light --- what we've seen is
6 pretty consistent with our expectations. It is
7 greater than 50 percent of the policyholders that have
8 been selecting that. The exact, I guess, measure of
9 that we haven't made public. But I'll just say that
10 we're very satisfied with it. And what it shows to us
11 is that the consumers understand the option.

12 I mentioned outbound calls. We've made
13 a lot of just sample outbound calls to try to gauge
14 and understand the ability of our communication to
15 make sure that the consumers actually do understand
16 the option around reducing from five to three. We
17 feel pretty good that there's good understanding, and
18 we think that the percentage of election has really
19 borne that out.

20 MS. FABIAN-MARKS:

21 That's interesting to hear. And the
22 landing spot, as it's colloquially known, the
23 inflation reduction option, is fairly complex in the
24 filing that you've made here, and that it's spread
25 over three years and policyholders could select that

1 inflation reduction at each of the one-year intervals
2 in those three years. So you mentioned your
3 communication process. Could you go into a little
4 more detail in how you explain that option to
5 policyholders?

6 MR. ZABEL:

7 Yeah. So I think a couple points to be
8 made. First of all, we've always felt it's very
9 important to lay out all the appropriate information
10 for a consumer to make the decision upfront. And
11 that's why, whether it's approved and implemented at
12 one time or it's tiered over multiple years, we do
13 believe it's very important to communicate that
14 upfront to the consumer, so they have that
15 information, they can make that decision and they're
16 not surprised when their second and third tiers of
17 that increase are implemented. We give the consumer
18 the ability at each increase to elect the landing spot
19 and elect the benefit reduction.

20 We believe that people's circumstances
21 change. And although at the beginning of the
22 implementation they may have felt that the
23 affordability would work for them, circumstances
24 change. And so at each point, at each implementation,
25 we would continue to give that election to them. We

1 also make that very clear in the communication that we
2 give them. We make it very clear in the communication
3 what the total approved increase is as well as how
4 that's going to be phased in over a period of years.
5 And that's pretty consistent with all states. We see
6 the spectrum of one time implementations all the way
7 up to, you know, three to five year types of
8 implementations.

9 MS. FABIAN-MARKS:

10 And then in the interest of time just
11 one more question. On some of these policies the
12 first rate increase you filed was in 2011, but you
13 began filing these in the early '90s and closed some
14 of them by the early 2000s. So why did you wait until
15 2011 to file those increases?

16 MR. ZABEL:

17 Yeah. And it gets back to a lot of what
18 Vince described earlier. When you think about the
19 percentage of claims that you pay in the first decade
20 of these policies, it's in the mid single digits. It
21 might be five percent of the lifetime claims that you
22 end up paying over the life of the policy. And we,
23 like many companies, wanted to balance, making sure
24 that we had credible data before we went forward with
25 rate increases, against making sure that we didn't get

1 too far into the future of the policy before we
2 started to ask for the increases. Did we strike the
3 right balance? That can be debated, but we made the
4 decision when we felt like we had the right credible
5 data to move forward with those rate increases, and we
6 felt pretty confident that we, in fact, were going to
7 experience losses and would experience those losses in
8 the future as well.

9 MS. FABIAN-MARKS:

10 Okay. Well, thank you for coming to
11 Harrisburg today. We appreciate your time.

12 MR. ZABEL:

13 Thank you again.

14 MS. FABIAN-MARKS:

15 Now, we're going to hear from John
16 Hancock Life Insurance Company. And here to represent
17 them is David Plumb, vice president and actuary for
18 long-term care in force management.

19 MR. PLUMB:

20 Thank you, Johanna. And thank you
21 Commissioner Miller and your staff for allowing us the
22 opportunity to participate in today's important forum.
23 I'm Dave Plumb, vice president of John Hancock, in
24 charge of our in-force management for our long-term
25 care business. We've been providing this product

1 since 1987. We believe that long-term care insurance
2 plays and should continue to play a vital role in
3 financial planning in the lives of our insureds and
4 their families, especially with strained Medicaid
5 budgets and the need for LTC services rising
6 dramatically. The long-term care can end up costing
7 hundreds of thousands of dollars, and that can easily
8 deplete someone's savings and then some. And pooling
9 your risks with others through long-term care
10 insurance is a much more affordable way than trying to
11 earmark savings to potentially cover the hundreds of
12 thousands of dollars that some of the unfortunate
13 people do spend.

14 Now this is a very long duration
15 product. People buy in their 50s and most claims
16 happen in the mid-to-late 80s and even into the 90s.
17 And the costs of this protection are very difficult to
18 predict many decades in advance. So providers really
19 need to have the ability to adjust premiums to reflect
20 actual experience. If not, I don't think there would
21 be any market for this type of insurance and many,
22 many more people would end up depleting their savings
23 and then accessing Medicaid after they've done so. In
24 the earlier premium increases in the industry, or at
25 least with John Hancock, our earlier premium increases

1 were caused by low lapse rates. Everybody has already
2 talked about that and we'll get into that. Our
3 current rate increases are driven by mortality and
4 claims experience. So really our lapse issue we think
5 is behind us. Our assumption has been very low, less
6 than one percent for a long time. You can't go much
7 further. But now we're seeing mortality and claims
8 experience deterioration.

9 And I would say that this is still a
10 very young product, and companies are just recently
11 beginning to see their insured life experience at the
12 older attained ages and later policy durations. And
13 that's where the vast majority of claims would be
14 expected to happen over the life of a policy. And we
15 are seeing more people live to those older ages. And
16 when they get there, unfortunately, we're seeing a
17 higher claims rate for people at the older ages and
18 claims lasting longer when they're incurred at the
19 older ages.

20 And again, rate adequacy I think is
21 critical for this product to be sustainable in the
22 future. Now, of course, we recognize that these
23 increases that we're filing may be difficult for many
24 of our customers. So we've taken some major steps to
25 help ease the burden on our customers. One, we're

1 applying the more restrictive rate stability
2 regulations to our older block of business, the free
3 rate stability block. And even then we're not asking
4 for the most the rate stability regs will allow us to
5 ask for. We're also ensuring that on all of our
6 business that the rates on our in-force policies after
7 the rate increase are not more than what we're
8 currently charging for new business. That's a
9 requirement for rate stability policies, but for the
10 older blocks it's not required. But we are applying
11 that.

12 And in fact, very often our in-force
13 rates after the rate increase are substantially less
14 than our new business rates. So people are still
15 paying less than what someone would pay off the street
16 today for the same policy at the same issuance as they
17 originally bought. We do provide typical benefit
18 reduction to help mitigate the impact of rate
19 increase, daily benefit, benefit period, elimination
20 period adjustments. But most importantly in 2010 we
21 pioneered a unique alternative where those who have
22 automatic inflation protection can completely
23 eliminate the rate increase by reducing their future
24 inflation accruals.

25 As Steve mentioned, the same with John

1 Hancock, that anything you accrued in the past at the
2 older --- at the higher rate of inflation will stay
3 with your policy. You don't lose that. It's only
4 going forward that the accruals are less. And we call
5 that the future inflation reduction landing spot or
6 landing spot for short. And in Pennsylvania, 62
7 percent of those who are eligible for the landing spot
8 actually took advantage of it in our prior increases.
9 And typically, we see about 70 to 80 percent of the
10 customers impacted by a rate increase are eligible for
11 the landing spot.

12 And one of the reasons I think that this
13 inflation landing spot works so well is that recent
14 inflation in long-term care costs has been between one
15 to four percent, really one percent for home care,
16 which is the number one use that --- you know, people
17 use home care more than anything else if you have a
18 long-term care insurance policy. It's really not that
19 often that people actually use nursing homes when they
20 have a long-term care policy that will pay for home
21 care. But the facilities are up there towards the
22 four percent and home care is one percent.

23 And we develop this option for one
24 reason only. It's to help our customers retain their
25 valuable protection. We don't want to lose customers

1 and have them not receive anything of value from us.
2 And our experience has shown us that this has been a
3 tremendous benefit in helping people do just that,
4 retain their valuable policies.

5 Now, a little bit on our current filing.
6 It affects about 7,000 of the 25,000 Pennsylvania
7 policyholders that we have in-force. The average
8 increase is 20 percent and the range is from two-and-
9 a-half percent to 88 percent. And we had a filing in
10 2014 that was capped at 20 percent. I think the
11 average was about 18 percent, but the maximum increase
12 was 20 percent. And this filing is just for the
13 unapproved amounts from that prior filing. So it's
14 not from any new developments in our experience. It's
15 just the amounts that weren't approved in the past.
16 And the larger amounts are for the insureds who were
17 capped at 10 to 20 percent in various filings between
18 2010 and 2014.

19 And mostly those are policies that
20 weren't eligible for the inflation reduction landing
21 spot whereas in the past oftentimes if you were
22 eligible for that option we would receive the full
23 amount of the rate increase and then the increases
24 were capped on policies without reduction. We do
25 actively support the 2014 model regulation and the

1 2013 model bulletin and we would encourage
2 Pennsylvania and every state really to adopt those
3 models because I think they provide greater consumer
4 protection. There are more stringent loss ratio
5 requirements for all business, particularly the
6 pre-rate stability of business. There is a
7 prohibition against recouping past losses in the
8 revised model, in the NAIC model. And there is
9 enhanced consumer disclosures and more accessible
10 contingent nonforfeiture benefit.

11 So I'd just like to close by saying that
12 we're committed to working with you to ensure a
13 vibrant and responsible long-term care marketplace.
14 And again, thank you very much for having us to the
15 important meeting. We'd be happy to take any
16 questions you might have.

17 MR. LAVERTY:

18 Thanks, Dave. Now, would John Hancock
19 make the landing spot available if the Department
20 approved your full increase but over a series of
21 years, say we approved it over three years?

22 MR. PLUMB:

23 Yes, we would. And we have done that in
24 other states. What we do is at the outset of the rate
25 increase we will notify the customer of the landing

1 spot option. If they have automatic inflation and if
2 they take the landing spot option, then none of the
3 scheduled rate increases, whether it's two, three
4 years or whatever, would apply to them.

5 MR. LAVERTY:

6 Okay. That's all my questions. Thanks.

7 MR. PLUMB:

8 Okay. Thank you again for having us.

9 MS. FABIAN-MARKS:

10 Thank you. And last up, we're going to
11 hear from Metropolitan Life Insurance Company.
12 Jonathan Trend, assistant vice president and actuary,
13 is here to talk about their filing.

14 MR. TREND:

15 Good morning. And thank you for having
16 us. It's good to be here and we appreciate the
17 opportunity. As you said, I'm Jonathan Trend. I'm an
18 actuary with Met Life and have responsibility for our
19 long-term care product. I did send some slides, and I
20 have a few prepared remarks to accompany them. Do I
21 need to ---? Thank you.

22 Basically I really have two message
23 points. And obviously I'm not going to rehash a lot
24 of what's been said by the other speakers. I think
25 they did an excellent job laying out the framework and

1 the issues which, you know, are relatively similar
2 across the industry. I did want to highlight really
3 just two topics.

4 One is Met Life's approach to rate
5 action, kind of our philosophy and methodology, and
6 then separately discuss our experience from a consumer
7 point of view in terms of the reactions we've had over
8 the last several years. I really want to emphasize
9 our balanced approach. We have a lot of stakeholders.
10 Obviously, first and foremost, are our policyholders
11 and we understand the burden this can have upon them.
12 We also have, obviously, regulators, you and the other
13 jurisdictions. We have agents, group policyholders
14 and shareholders.

15 So our view is to take a balanced
16 approach. We think long and hard about taking action.
17 Every year in the normal course of action we do an in-
18 depth experience study on our entire book of business
19 to basically re-project what we think the assumptions
20 will be. We look at the experience of the block and
21 we also look at our assumptions regarding the key
22 things you had outlined in your opening remarks,
23 Johanna, lapse rates, morbidity rates, mortality rates
24 and basically say this is our best estimate view of
25 the world today. And based on that analysis we look

1 at our current rate basis and make the determination
2 as to its adequacy.

3 As others mentioned there's no attempt
4 to recover past losses. So whatever has happened in
5 the past has happened. Really our objective is to set
6 the ship on the right course going forward. So what
7 we're trying to do is solve for the premium that
8 should have been charged on day one if we knew then
9 what we know now. And so we request rate increases
10 consistent with what that rate basis should be with no
11 attempt to recover past losses. So we have a bunch of
12 math to go through to do that, which Jim has seen, and
13 I won't belabor you with the guts of that.

14 The other point here I want to make on
15 the slide is Met Life's --- part of this balanced
16 approach is flexibility and transparency. So we
17 understand there's a lot of ways to deal with the
18 issue and we are flexible both in how we deal with the
19 regulators in terms of --- you'd mentioned, Jim,
20 spreading the costs out over a multiple phase-in
21 period of time versus doing it all at once. And on
22 the policyholder side, we, as the other carriers,
23 offer a lot of options to help insureds keep their
24 coverage. If they choose to lapse it, we do have a
25 no-cost nonforfeiture option which gives them a paid-

1 up remaining benefit. But we hope they can either
2 afford to pay their new rate basis or can modify their
3 contract to keep the premiums at or close to their
4 original level. And there is a myriad of ways they
5 can do that. Our communications, we try to be very
6 clear. We give them some options around daily benefit
7 amount and maximum lifetime benefit, which are the
8 most common ways people modify their policies. But
9 they can always call our consumer number and work with
10 an individual rep to change or drop a rider, change an
11 elimination period, many other options, to work with
12 them.

13 Transparency, I mentioned. So we're
14 trying to be transparent with everybody. You know, we
15 do the math as I described. We're not trying to hide
16 anything. We share it with the regulators so you
17 understand what the business looks like and what we're
18 trying to achieve. And when we communicate to our
19 policyholders we try to bring that same level of
20 transparency. So when we have a rate increase we're
21 not only tell them obviously what the rate increase is
22 and how it affects them, but we also indicate what we
23 applied for. And if the amount that was granted by
24 the Department were less than that amount, we indicate
25 what the potential implications of that are so that

1 they can make informed choices. And you know,
2 sometimes that might be pay it and I'll see what
3 happens. Sometimes it might be I want to act now.
4 But we want to make sure our customers and their
5 financial representatives, their agents or their
6 financial advisors understand the full picture and can
7 make informed and smart choices for their personal
8 situation.

9 Last of all there, I'll just emphasize
10 that we're committed to this process. Annually we
11 look at our experience, annually we calculate what an
12 appropriate current rate basis would be and then we
13 would make a management decision at that point whether
14 to seek a rate increase, if appropriate, based on that
15 policy form series.

16 My second topic, as I said, is just to
17 provide some view to everyone as to our experience, as
18 did some of the other carriers. Complaint levels have
19 been very low, surprisingly low. We have they're less
20 than one percent nationally. Pennsylvania has been
21 consistent with that. Well, well below one percent of
22 policyholders write to us with a formal complaint.

23 Lapse rates, the people who choose to
24 move to that nonforfeiture status and have a residual
25 paid-up policy, I have about two percent, two to five

1 percent, a relatively low number of people choosing
2 that option, which again speaks to what we think the
3 value is of the product and the fact that the
4 consumers understand that value.

5 And then lastly, about 15 percent of
6 insureds choose to adjust their policy benefits to
7 keep their premium at a similar level to what it was
8 before. So that leaves over 80 percent of people just
9 paying the new rate basis.

10 Last bullet there, I just want to
11 highlight, you know, we are here to pay claims. Like,
12 we wrote this business, we took a risk. It provides
13 valuable coverage. That's what we're here to do. We
14 have a growing claims team to adjudicate these claims
15 and we're here to pay them. We've paid over
16 \$3 billion to date, including \$400 million last year.
17 And that's obviously going to grow for decades. And,
18 you know, we're here to be here for our policyholders
19 when they need us, and I'm proud of the service we
20 provide. So that concludes my prepared remarks. I'd
21 be happy to take any questions.

22 COMMISSIONER:

23 Thank you for being here. So I
24 understand your requests range from about 43 percent
25 to 60 percent. And so the question I have is, do you

1 think that's going to stabilize these blocks of
2 business or do you think future rate increases are
3 likely to be necessary?

4 MR. TREND:

5 Yes. I do think those will stabilize
6 the block. Obviously it's hard to make long-term
7 predictions, but our approach to calculating the
8 justified amount, which is consistent with the
9 regulatory environment and then on top of that we say
10 we're not going to recover past losses. So the
11 requested amounts of 43 to 60 percent are the
12 necessary amounts to bring the current rate basis to
13 an appropriate level going forward. And unless
14 there's a deterioration of assumptions, which is a
15 possibility, we don't and wouldn't expect to need any
16 more if that full amount were approved.

17 COMMISSIONER:

18 Okay. And can you clarify for me? I
19 think in your slides you suggested the lapse rate
20 might be two, to two and a half percent. But my notes
21 show that in the filing there were was a .5 percent
22 lapse rate assumed. Can you just clarify that for me
23 in terms of what you're anticipating?

24 MR. TREND:

25 Well, our filings discuss both our

1 baseline lapse rate, so just normal lapses. The slide
2 was referring to what we call shock lapses. So people
3 who basically get a letter and say I'm going to choose
4 the nonforfeiture option. The reason we're all a
5 little bit couching --- it's about this ---
6 policyholders don't say I'm lapsing because you gave
7 me a rate increase. So there's no hard way to discern
8 who would have lapsed anyway in the normal course of
9 their life versus their specifically responding to the
10 rate action. So our filings disclose both our
11 baseline assumption around lapse, mortality and
12 morbidity and specifically our assumptions around the
13 shock lapse and shock downgrade.

14 COMMISSIONER:

15 Thank you very much. I know we're
16 running a little behind and I want to make sure we
17 give consumers an opportunity, so thank you so much
18 for being here.

19 MR. TREND:

20 Thank you.

21 COMMISSIONER:

22 I appreciate it.

23 MS. FABIAN-MARKS:

24 And now we're going to take a short ten
25 minute break, and after that we will hear from

1 consumers. So we'll reconvene. It's 10:35. We'll
2 reconvene at 10:45 for the consumer portion of the
3 hearing.

4 SHORT BREAK TAKEN

5 MS. FABIAN-MARKS:

6 We have a number of folks who have
7 signed up to testify. And we're looking forward to
8 hearing from all of you. But due to the number of
9 people we have in attendance, we're going to ask
10 people to limit their testimony to about two minutes,
11 please. And just to sort of frame this portion of the
12 hearing, this is an opportunity for us to hear from
13 you, for us to hear your thoughts and what you would
14 like us to consider when we're reviewing these
15 filings. This isn't necessarily designed to be a
16 question and answer session. If you want to raise
17 questions that you want us to think about as we're
18 reviewing filings, we welcome that and we're also
19 happy to speak with anyone after the hearing to
20 respond to questions.

21 And so we have some satellite locations
22 around the Commonwealth. At this point we only have
23 members of the public who wish to speak in Scranton.
24 So we have them live now and we're going to hear from
25 them. If anyone else at the other satellite locations

1 does decide that they want to speak, just let the
2 coordinator there know and they'll get in contact with
3 us. But at this time we'll hear from Scranton.

4 MS. CROMARTIE:

5 Good morning. My name is Pat Cromartie.
6 Can you hear me?

7 MS. FABIAN-MARKS:

8 Yes.

9 MS. CROMARTIE:

10 Okay. Good. I appreciate the
11 opportunity to hear this presentation by the panel.
12 And Commissioner Miller, I thank you for setting this
13 up. I am here as a citizen. I don't represent anyone
14 but myself and my elderly brother-in-law.

15 Just as a quick overview so you
16 understand why I'm even involved in this, my eldest
17 sister died 15 years ago. She and her husband had no
18 children. I was four years old when they got married,
19 so I'm the next best thing to a child for them. And
20 my brother-in-law was 69 years old at the time, had a
21 lot of concerns about really never wanting to go to a
22 nursing home, never wanting to be in an assisted
23 living facility. He has a little house on a lake in
24 the Poconos and said to me, if there's anything I
25 could possibly do to live my life here and die here,

1 this is what I want to do.

2 So we went to a financial advisor --- I
3 was very aware of long-term care insurance --- and
4 purchased a policy with Unum. So Steve Zabel, Mr.
5 Zabel, a lot of this information is really about your
6 company. We selected Unum because I have a background
7 in healthcare administration. I was very aware of
8 what a wonderful company Unum has been. So we
9 purchased the policy and the policy had a clause, a
10 rider in it, that his monthly benefit for either
11 skilled assisted living or homecare --- and believe
12 me, we were heading for --- the homecare was what we
13 were really after --- was a \$4,000 a month benefit.
14 But we have a rider on it that says that there would
15 be a five percent increase of that benefit compounded
16 annually. So roughly if you compounded that out now
17 he'd have about an \$8,300 monthly benefit that he
18 could collect if he needed it. Luckily that has not
19 happened. He's 82 years old and he's a very healthy
20 guy.

21 We started paying premiums --- I say we
22 because I handle his financial information. In 2000
23 is when the policy was written. In 2006 --- and I'm
24 assuming, Commissioner Miller, you weren't in this
25 seat at that time. In 2006, the Pennsylvania

1 Insurance Commission granted an increase to Unum. So
2 in the effort of being transparent, we really need to
3 be transparent here. This is not like these policies
4 are old and this is the first time insurance companies
5 are coming and asking for a premium increase. The
6 real transparency is that --- and I have all the
7 documents. I'm a little crazy about saving stuff, and
8 I'm glad actually I did. It took me three minutes to
9 get ready for this.

10 In 2006 he got a letter from Unum
11 stating that the Pennsylvania Insurance Commission had
12 approved an increase. And my brother-in-law's premium
13 was going to go from \$3,700 a year up to \$4,900 a
14 year, \$4,950 or something like that, so roughly around
15 a 30 percent increase. At that time he was fully
16 retired and living --- they had assets saved, but his
17 annual income is \$12,000 a year. He lives on Social
18 Security. Okay? But this is a big priority for him.
19 So when that came through, his first instinct was I
20 can't pay \$4,900 a year and then two years from now
21 it's going to be \$5,500. And we had a long talk and
22 the truth of the matter is he's very knowledgeable and
23 so am I. Insurance is a risk. It's a risk company.
24 You can have a \$1 million 20-year term policy and if
25 you live to year 23 the insurance company won the

1 policy premium money and the person who died's family
2 lost. We understand how that works. And our theory,
3 his and mine both is, we hope you pay this premium
4 until you're 90 and go to bed some night and die in
5 your sleep and never collect a penny of it because
6 then you would have won the elderly lottery of not
7 having to go through losing your ability to care for
8 yourself and needing money and needing assistance.

9 So when this increase came up in 2007 we
10 checked out what our options were. This whole idea of
11 forfeiting some benefits or changing the policy so
12 that he can have a better premium and especially of
13 forfeiting the inflationary clause, this is not new.
14 Please understand, I think there's some confusion out
15 there that this is something knew that the insurance
16 companies have come up with now because they want to
17 be helpful. In 2006 we were offered that option.

18 So in 2007 for our premium, which I
19 think is 60 days later, we did indeed drop that rider.
20 So what we said was, okay, we will not take a five
21 percent compounded unlimited, which is the
22 terminology, increase. We will hold our benefit at
23 \$4,000 a month and let's get this increase off the
24 table and see if we can have a reduced premium. And
25 we did get a reduced premium. He went from paying

1 \$3,750 roughly a year down to about \$3,300 a year.
2 Okay? So we already, he already waived all the
3 inflationary costs. But again, keep in mind he's in a
4 different situation. The goal was not to have to pay
5 for the huge costs of skilled nursing or long-term
6 care, but yet to keep him at home with family members,
7 no children but other family members chipping in and
8 maybe needing, you know, one or two people to come in
9 and help at night. So we already did waive that. And
10 we already did concede to that.

11 So I just wanted it to make it clear
12 that that's not a new thing that's on the table. Now
13 that ---.

14 MS. FABIAN-MARKS:

15 And Mrs. Laverty (sic), we definitely
16 appreciate your testimony. I'm afraid we are asking
17 folks to limit themselves to about two minutes. I
18 don't want to cut you off but I do want to ---.

19 MS. CROMARTIE:

20 Okay. Okay. Well, I think you needed
21 to know where I was coming from, and that's why I gave
22 you the background because those are things that I
23 think were confusing to anybody who was listening to
24 this. Okay?

25 My point now is, if the insurance

1 companies are going to offer other ways for people to
2 not pay these increased premiums, perhaps one of the
3 things that should be considered --- and Commissioner
4 Miller, I would be happy to send you all of the
5 information, do anything after this meeting that would
6 be helpful to this. But right now if my
7 brother-in-law goes into forfeiture for his policy and
8 then collects the \$52,500 of premiums in terms of
9 benefit that he's already paid in, well, again, the
10 insurance company would then win on that gamble
11 because basically then what they've done is set up a
12 savings account for his premium money. And if he does
13 die in his sleep like we hope he does when he's 90,
14 they still keep all of that premium money.

15 And I understand everything about ---
16 everything that people presented is valid about all
17 the things that they expected to do and didn't. But I
18 think there's a point here where then people should be
19 offered also refund of their full benefits plus the
20 three percent interest that came across the board.

21 And my last point and I'm finished is
22 that I also went online and looked up the 2015 and
23 2016 stockholders' perspectives and all of their
24 stockholder information for Unum. Every company is on
25 there. I understand that this a subdivision of Unum,

1 this closed business subdivision of Unum, but Unum on
2 a whole from 2007 up to and including today has had a
3 steady increase in all of their stock values and in
4 all of their dividends and they're a very solid, good
5 company. So I don't know if the bad investments get
6 spun off from the side company or what. But that
7 needs to be, really, looked at closely. Thank you
8 very much for your time.

9 MS. FABIAN-MARKS:

10 Thank you.

11 MS. CROMARTIE:

12 And if you would like any information
13 from me I will copy policies, letters, anything that
14 anybody would like.

15 MS. FABIAN-MARKS:

16 Thank you.

17 MS. CROMARTIE:

18 Thank you.

19 MS. FABIAN-MARKS:

20 We appreciate that and appreciate your
21 comments. Was there anyone else in Scranton who
22 wanted to speak at this time?

23 SCRANTON COORDINATOR:

24 No. That's all for us.

25 MS. FABIAN-MARKS:

1 Okay. Thank you. With that, we'll go
2 to consumers in Harrisburg. We'll take a couple
3 comments from Harrisburg, then we'll switch to
4 Pittsburgh and then we'll come back to folks here in
5 Harrisburg. So first on my list I have Kenneth Yoder.
6 I think he may have had to leave early. Okay. Next
7 up I have Brad Shepard. Are you present?

8 MR. BRAD SHEPARD:

9 Where shall I sit?

10 MS. FABIAN-MARKS:

11 Right here, sir.

12 MR. BRAD SHEPARD:

13 Right here?

14 MS. FABIAN-MARKS:

15 Okay. Thank you.

16 MR. BRAD SHEPARD:

17 Thank you. Good morning, everyone and
18 thank you, Commissioner. My name is Brad Shepard and
19 thank you for allowing me to speak today about a topic
20 that is near and dear to my heart. I have been
21 helping families plan for long-term care needs for 17
22 years and have spent a large part of my career either
23 affiliated with or employed by Genworth or one of its
24 predecessor companies. In addition, I've trained
25 agents and advisors on long-term care insurance

1 products and often speak on the topic of long-term
2 care planning.

3 Very briefly, I would like to share some
4 thoughts about the value of long-term care insurance.
5 This planning solution is more than just an insurance
6 product, which stereotypically is sold to elderly
7 people across the United States. As you have learned
8 this morning, when people make the decision to obtain
9 long-term care insurance as their best planning
10 solution they take true ownership of the policy.
11 You've heard many comments about lapse rates. In
12 fact, I've heard many times from policyholders that
13 they consider their policy to be equivalent to an
14 extended healthcare checking account, therefore
15 strengthening their first line of defense and creating
16 a moat of protection around their savings, personal
17 independence and the looming possibility of needing
18 care provided by family members.

19 We also realize as a nation the fastest
20 growing segment of our population is age 65 and above.
21 In my opinion only one of the toughest challenges that
22 we as a country face is educating the masses about the
23 need for long-term care planning. Long-term care
24 insurance is just one planning solution and not
25 appropriate for everyone. Once a person has enough

1 knowledge to make an informed decision, they are
2 empowered to act accordingly. I encourage all
3 parties, both public and private, to provide more
4 avenues to educate Americans on this critical risk of
5 needing extended healthcare that we face together. An
6 idea would be to introduce educational campaigns
7 targeted to all Pennsylvania residents age 50 and
8 above. The campaign could be associated with a
9 neutral website created by the state as a way to begin
10 the conversation among friends and family.

11 Other ideas may require legislation
12 changes at the state and/or federal level to allow
13 residents to use different levels of pre-tax dollars
14 to fund more long-term care planning solutions. There
15 are many ideas that are out there being thrown around.
16 It could be such things as using 401(k) dollars to pay
17 for tax qualified long-term care. There could be
18 other things such as higher levels of deductions
19 and/or tax credits like a neighboring state, New York,
20 allows for, because this in the end is all about, you
21 know, having more people protected.

22 In closing, as a country, state, county,
23 city, community or each household we live in, we are
24 all in this together. By working together, we all
25 benefit from the creativity, teamwork and compromise.

1 I am very proud to be a member of this education team
2 and will continue to do so with my head held high. I
3 want to finish though with saying thank you. And by
4 the way, I am also a consumer. I bought my first
5 long-term care policy at age 23. Thank you, everyone.

6 MS. FABIAN-MARKS:

7 Thank you. We appreciate those comments
8 and suggestions. Next up I have Sandra Curley. Are
9 you present?

10 MS. CURLEY:

11 Good morning. Good morning,
12 Commissioner. And thank you very much for allowing us
13 to do this. I am a registered nurse of many, many
14 years. And I've been a long-term care insurance
15 specialist for about 21 years. And Mr. Shepherd said
16 just about everything I wanted to say. Thank you,
17 Brad. So I'm not going to repeat most of my notes.
18 Many of my notes are exactly what Brad has shared with
19 you.

20 I too am a consumer. I own a long-term
21 care insurance policy. But I also had a mom that had
22 a long-term care insurance policy who could not afford
23 to pay the premiums, didn't have assets, had very
24 little income. But I bought that policy for her and
25 she was age 70 when she purchased the policy. I paid

1 for it for about 10 years. I put in about \$35,000,
2 and we got back about \$145,000. That allowed my mom
3 to live in dignity for seven years that she required
4 care. It allowed me to get a choice for her so that
5 she could be in dignity where she received her care
6 and nobody knew that she didn't have any money or that
7 she couldn't really afford to be at the Bridges, which
8 is a beautiful assisted living facility not far from
9 here.

10 Long-term care insurance is a Godsend to
11 most of my clients. I have about 2,500 clients. Many
12 of them are on claim. Because I'm a nurse I help them
13 with their claim, when they open up their claims and I
14 see the impact on their families, not the least of
15 which is their financial impact, but most of all their
16 families. Long-term care and the need for it tears
17 families apart. And long-term care insurance truly is
18 a Godsend for them. Please consider tax credits, as
19 Brad has shared, taking the money to pay for 401(k).

20 I believe over the years, I respectfully
21 say as well, I was so excited about one of the
22 benefits that was offered. I represent all of the
23 companies that are here today and we have a
24 survivorship benefit. And if you understand how that
25 works, if you are a policyholder for ten years and

1 didn't file a claim and then there is a death of one
2 the survivors, the survivor person never pays another
3 dime to the insurance company. Is that one of the
4 reasons why we are having problems here today?

5 And also, there is a waiver of premium
6 whenever one begins using the policy. I don't stop
7 paying my State Farm if I have a car accident, you
8 don't either. We don't stop paying our medical
9 premiums, our Medicare or health insurance if we get
10 sick. These are some of the things that I
11 respectfully think that should be considered. We
12 can't promise everything, but at least if they would
13 give the base benefit. I thank you very much,
14 Commissioner. Thank you for allowing me to share.

15 MS. FABIAN-MARKS:

16 Thank you. Yes?

17 COMMISSIONER:

18 And I want to hear from the rest of the
19 consumers so I'm going to be very quick. But I want
20 to say I really appreciate the comments that were just
21 made because I think one of the things for those of
22 you who don't know --- one of the things we've been
23 thinking about a lot from the Department's perspective
24 is the future of long-term care insurance. Clearly
25 we've heard this morning about a lot of the challenges

1 facing this market. And I think we all appreciate
2 those challenges and that this is just a really
3 challenging market for everyone, for consumers, for
4 industry, for regulators. So we actually are chairing
5 a work group through the National Association of
6 Insurance Commissioners, since --- I mentioned at the
7 beginning this is not just a Pennsylvania issue. This
8 is a national issue. We're chairing an innovations
9 --- a long-term care innovations work group where
10 we're going to be looking at some of these things you
11 just raised and trying to figure out how can we
12 address some of these challenges of the market going
13 forward because we do recognize the impact that long-
14 term care costs have on Medicaid and our state
15 budgets. So I really appreciate those comments and
16 we're certainly thinking along these lines as we chair
17 that work group.

18 MS. FABIAN-MARKS:

19 And now we're going to go to Pittsburgh
20 to hear from some members of the public who are there.

21 MS. PEPPERMAN:

22 Hi. My name is Sarah Pepperman. I'm
23 with Family Services of Western Pennsylvania and the
24 Apprise Program here in Allegheny County. And we have
25 a few questions. First is, if rate increases are

1 approved, when will they go into effect?

2 MS. FABIAN-MARKS:

3 I think that varies depending on the
4 kind of company and when they're rolling out their
5 rate increases after approval, but there is a
6 notification process for the consumers.

7 MS. PEPPERMAN:

8 Okay. Our second question is from one
9 of the attendees here, Erika, who is asking how do
10 companies determine which plans specifically will get
11 increases in their rates and how much of a rate
12 increase there will be. She has Genworth so we're
13 particularly interested about that company. For
14 example, are the plans chosen based on health rating
15 or date of purchase or some other criteria?

16 MS. FABIAN-MARKS:

17 So I can't speak for any specific
18 company, but in general the companies look at how much
19 money they're spending on benefits or how much they
20 project they'll be spending on benefits. And then if
21 they need to make up more money, as I discussed at the
22 beginning of this hearing, they evaluate their loss
23 ratios which is the ratio of how much they're spending
24 on benefits to how much they're bringing in, in
25 premium. And if that starts exceeding a certain level

1 then they can come in for a rate increase. It's not
2 based on health or date of purchase specifically.
3 It's more looking at that loss ratio.

4 MS. PEPPERMAN:

5 Okay. On a plan-by-plan basis?

6 MS. FABIAN-MARKS:

7 They don't look at it for like
8 individual consumers. They'll look at it --- they
9 have blocks of policies that they group together.

10 MR. LAVERTY:

11 In Genworth's case they're asking for
12 higher increases if you have an unlimited benefit
13 period. If you have a shorter benefit period, the
14 increase is lower.

15 MS. PEPPERMAN:

16 Thank you very much. Another question
17 from our participants here is wondering if long-term
18 care is becoming a product for the one percent?

19 MS. FABIAN-MARKS:

20 I don't know about the one percent, but
21 certainly premiums are increasing and we're aware of
22 that. And it can be out of reach for many folks. And
23 as the Commissioner mentioned, that's why she is
24 chairing this work group that's beginning with the
25 National Association of Insurance Commissioners to

1 look at ways that we can get the market to a place
2 where it's working better.

3 MS. PEPPERMAN:

4 And we have one last question which is
5 asking if there's a difference between cancellation of
6 a policy and nonforfeiture, and if you could explain
7 that, please.

8 MS. FABIAN-MARKS:

9 I believe nonforfeiture typically occurs
10 within a certain period after a rate increase is how
11 it's kind of differentiated from a cancellation. But
12 I'll actually turn that over to Jim to answer.

13 MR. LAVERTY:

14 Well, if the policy had a nonforfeiture
15 rider then the person would receive a paid-up benefit
16 if they chose to stop paying premium. In other cases,
17 if a policy was sold after our rate stipulated
18 regulation went into effect, they would have something
19 called a contingent nonforfeiture, which means if they
20 were subject to a large enough rate increase they
21 could receive a paid-up benefit. But again, if you
22 merely stop paying your premium and you don't have a
23 nonforfeiture rider, you didn't buy it initially with
24 your policy, or you haven't faced a substantial rate
25 increase, then if you cancel, you do not receive a

1 benefit.

2 MS. PEPPERMAN:

3 Okay. Thank you very much. That was my
4 last question.

5 MS. FABIAN-MARKS:

6 Thank you. So with that we'll return to
7 members of the public who are here in Harrisburg. And
8 next up --- is Garrett Mowry present? Thank you.

9 MR. MOWRY:

10 Hi. Good morning. Good morning,
11 Commissioner, thank you for having me today. I'll
12 just start off by saying I'm a third generation
13 licensed insurance professional, and I'm here to talk
14 on behalf of my grandfather, Former Senator Hal Mowry.
15 I was very lucky that the beginnings of my insurance
16 career were the end of his, and I was able to work
17 with him, which is a really unique thing. Not only
18 as, you know, a professional mentor but as my
19 grandfather.

20 The last five years of his life, he was
21 in still in our office daily, still coming into my
22 office every day, checking into to be sure I was
23 making something happen. And, you know, one day
24 really similar to the weather we've been having we met
25 in the morning, went out to our usual lunch spot, came

1 back. And he said, all right, you know, I'll see you
2 tomorrow. I'm going to go smack some golf balls. And
3 that evening we get the phone call that he dropped.
4 You know, he dropped over out of nowhere. And what
5 ensued, you know, the next 11 months were terrible,
6 you know. It was our family going through three
7 different nursing facilities, in and out of intensive
8 rehab care and a horrible thing. But he was a
9 Genworth policyholder and that was, as some other
10 people before me have said, a true blessing to me and
11 my family.

12 As everybody knows who has loved ones
13 and have gone through hard things, the last thing you
14 want to do is get in a discussion about money and
15 who's going to pay for what. And, you know, the
16 policy alleviated that for us and our family. And I'm
17 forever grateful for that. So he would always say,
18 you know, don't try to get in this business to sell
19 somebody something or show them something on a
20 brochure. Tell a story. And I have his story to tell
21 and that's why I'm here today. So thank you.

22 MS. FABIAN-MARKS:

23 Thank you. Now, Ben Iancavetti, are you
24 present? Okay.

25 MR. IACOVETTI:

1 I only have two minutes. I have to talk
2 fast. Thank you so much for having me and giving me
3 the opportunity to be here. Welcome to Pennsylvania,
4 Commissioner, first of all. AF&L and Senior American
5 are two companies that we own. As I look around this
6 audience today, I was talking to people earlier. I
7 said it's important for people to know who we are and
8 what we do. Because where we are is where they will
9 be. And I look at this and I go no greater companies
10 that Genworth with the GE Heritage, with Met Life,
11 with John Hancock and with Unum. Fantastic companies,
12 all of them.

13 The one thing that we have in common
14 with them is we are a long-term care insurance
15 company. Ninety-six (96) percent of our business is
16 long-term care. We have done many rate increases for
17 the reason no other than sick people are living on
18 claim much longer than anyone has ever anticipated.
19 And we could tell you with no degree of error how many
20 people with blue eyes go on claim versus with green
21 eyes. And interestingly people that are left-handed
22 are more likely to go on claim than people that are
23 right-handed. How about that for detail?

24 We're here and the point that I'm trying
25 to make is, the only reason we're here is because of

1 the Pennsylvania Insurance Department. Our
2 shareholders have lost everything. We operate AF&L
3 without a profit motive but we do anticipate honoring
4 all of our obligations to policyholders, to our agents
5 and to that few number of employees that we have left.

6 So with a degree of specificity we have
7 blocked our business into different groups. Small,
8 medium and large risks with inflation and without
9 inflation. And in our most recent rate filing that
10 was approved I believe in 2014 --- which Johanna and
11 Jim have so eloquently worked with us to try to get
12 done --- we requested a zero percent increase on the
13 small policies. And that with coverages that were
14 limited to just two years. The three and four year
15 policies are our medium risks. The five year and
16 lifetime are large risks. And the people with
17 inflation are different than the people without.

18 We are very happy to report that we
19 fixed the rates for the small policies without
20 inflation. We are unhappy to report that after all
21 these years, and I believe we're up to six rate
22 increases since 2002, we still have not fixed the
23 rates for the unlimited lifetime policies, and we have
24 not fixed the rates for the inflation policies and
25 there's nothing more that we can do. We operate AF&L

1 at, we think, for free. We had our agents agree to a
2 voluntary commission reduction, unprecedented. We run
3 the company on excess investment income. There is
4 nothing more that we can do.

5 I'm looking at Genworth there. For
6 years we admired Genworth because when we were only
7 earning four percent on our portfolio, they were
8 earning six. For whatever reason, we repositioned our
9 portfolio during the great recession. Now we're
10 earning six percent and Genworth is now only earning
11 four. Our greatest investment, my favorite
12 investment, are Build America bonds issued by the
13 Pennsylvania Turnpike Commission. Every time you use
14 the Easy Pass we get paid 6.6 percent. That is not
15 our money. That is policyholder money that we put to
16 great work and we're just here to say, listen.

17 I was talking to Vince earlier. We have
18 the smartest guys in the room, and Jonathan Trend is
19 there looking at me as well. We had the smartest guys
20 in the room help us to design these policies. They
21 are rocket scientists. We missed. We missed. There
22 was a little story about the Hubble telescope. When
23 they designed the Hubble telescope, the smartest
24 rocket scientists in the world did it, they put it
25 into outer space, it didn't work because there was

1 some correction that they needed to do to the lens.
2 It's the same thing with us. What are we going to do?
3 Our average claimant is now 87 years old at time of
4 claim. Eighty-seven (87). All of our policyholders
5 that are not on claim are 83. Most of our
6 policyholders have outlived their expected lives. We
7 didn't do it. We look at the smartest guys in the
8 room and we're like, we don't know what more to do.
9 We can't change the policies, we honor our
10 obligations. The only thing that we can fix are the
11 rates. So we don't want to do this, we have no
12 interest in raising rates.

13 When policyholders call they'll get me
14 and they'll complain to me about you people, you
15 people keep raising their rates. And I say, sir or
16 ma'am, it's not you people, it is me. And they're,
17 well, what do you mean? I'm the guy that raised your
18 rates. I'm the guy that pushed the button. You're
19 talking to me, I'm responsible. And then their whole
20 demeanor changes and it comes down to this. You know
21 what Ben, we understand. We understand that old
22 people are living on claim forever. We don't make any
23 judgments about whether or not it's a quality of life
24 issue, we just pay the claim. In the last eight years
25 we collected \$275 million in premium. We paid out

1 \$325 million in claims. Cash in, cash out. Thank
2 you.

3 MS. FABIAN-MARKS:

4 I'm just going to have to ---.

5 MR. IACOVETTI:

6 We understand. I'll have my time some
7 other time. Thank you.

8 MS. FABIAN-MARKS:

9 All right. Thank you. We appreciate
10 your testimony. Okay. Next up Brian Donmoyer.

11 MR. DONMOYER:

12 Good morning, everyone. It's still
13 morning. I'm the first consumer you're going to hear
14 from today. I'm a little disappointed at that, I have
15 to say. I think there should have been consumers at
16 this point, not producers and not people that have a
17 vested interest in the industry. So maybe in the
18 future I would do that. So, thank you.

19 The reason I'm here, I've been a
20 Genworth policyholder since 2003. We had the
21 experience of having a father-in-law live with us and
22 we decided we're not going to do that to our children.
23 So we ran out at 49 and bought a long-term care
24 policy. When we bought that policy we had lots of
25 things presented to us and the lady sitting beside me

1 was actually my agent and she did her very best to
2 present a very balanced and appropriate presentation
3 including a brochure that Genworth produced. It's the
4 Pennsylvania brochure, 2238, so this was for PA. And
5 I'm going to read where it says, and while past
6 achievement is not an indicator of future performance,
7 we're proud to tell you that since we developed the
8 coverage in 1974, we have not raised premiums for any
9 of our long-term care policyholders. If we do have to
10 raise premiums in the future, it will be done by class
11 of insureds and state with advance written notice to
12 you.

13 Well, when I bought this policy, I had
14 full thought that if it didn't happen for 30 years,
15 it's probably not going to happen for the next 30
16 years. Well, I was wrong. And we all heard why I was
17 wrong and lots of other people were wrong. But it's
18 been a little disturbing. I have had two increases.
19 I've filed complaints with the Insurance Department
20 both times. One of the times I thought, well, gee,
21 let's change this five percent that's such a burden to
22 the insurance company from compounded. I'm in my 60s
23 now. I'm not in my 40s. I'll change it to simple.
24 Well, unlike the landing spot, Genworth chooses to go
25 back to the original issue date and recalculate a

1 simple five percent. So I end up losing what I had
2 paid for, for 12 years. Well, that wasn't a very good
3 move so I certainly didn't do that. And in all
4 fairness, I've spoken to the Genworth people here
5 today and having the president here was, I think, an
6 honor and that's appreciated. And it'll be
7 interesting to see, you know, if that policy does
8 change. Because from hearing other companies, it
9 works. When they give people that opportunity, they
10 take it.

11 And the other suggestion that I had made
12 in my last complaint to the state was I think the
13 companies should notify the insured when they apply
14 for a rate increase, not after the fact. By the time
15 I was complaining it was too late. I did see today
16 with the presentation that there is a website that I
17 guess if you check it all the time you can see if your
18 rates are going to go up. But it would seem to me
19 that it would be appropriate for the insurance
20 companies to provide the insured a notification that
21 they are applying for a rate increase and at that
22 point the public can be heard more easily than finding
23 it on a website.

24 Again, I appreciate everything the
25 companies are doing, including Genworth, to try to

1 lower the rates for us insureds that have policies.
2 But I have to say that after hearing that the
3 increases are probably not over, I think my next stop
4 is an elder law attorney and it might just be easier
5 to be on Medicaid. And I never thought I'd say that,
6 but it has to cross everyone's mind that has to go
7 through these increases. And especially now after
8 hearing that they may not stop. So thank you.

9 MS. FABIAN-MARKS:

10 Thank you for your testimony. Next,
11 Richard Arnold. We invite you to come up.

12 MR. ARNOLD:

13 Thank you for the opportunity to testify
14 here today. I'm Richard Arnold and I'm here on behalf
15 of myself and my wife Ellen. We have companion long-
16 term care policies issued at the same time in the year
17 2000, and on the same policy form by one of the
18 companies seeking a rate increase.

19 At the time we purchased these policies,
20 we were led to believe that our age or health
21 condition would not affect the policy as we got older.
22 We were told the only way the premium could increase
23 would be if the Pennsylvania Insurance Department
24 would approve an increase and that premium increase
25 would have --- were very rare. There's actually a

1 statement in our policy that says we cannot change the
2 provisions of this policy without your consent.

3 For several years there wasn't a rate
4 increase. We got the policy 16 years ago. But in the
5 past six years we've seen three rate increases. On a
6 compounded basis, my premium has increased 116 percent
7 and my wife's premium has increased 128 percent, more
8 than doubling the cost of our insurance. We've been
9 forced to substantially reduce the benefits in order
10 for our premiums to be affordable.

11 Are the company's actuarial assumptions
12 that they need to more than double the cost of the
13 policies? As my policy is situated now, by the time I
14 reach age 89 my premium payments will have been \$4,039
15 more for \$190,000 less lifetime maximum benefit than
16 specified by my original policy, and a reduction of my
17 daily benefit from \$368 to \$316. A substantial
18 portion of my premium, about a third of it, is for an
19 automatic benefit increase rider which is supposed to
20 protect us from the effects of inflation as we grow
21 older. Instead the premium is inflating drastically.

22 I recognize the Department's dual
23 responsibility of protecting consumers and making sure
24 that insurance companies can pay their claims. But
25 the process has become unbalanced. I cannot find that

1 any of the companies currently seeking increases are
2 in financial difficulty. I've looked at their SEC
3 filings and they all seem to be very sound companies,
4 and they don't need government's help. I have found
5 that one of the companies paid their top executive \$11
6 million last year, hardly an indication that they need
7 government help to raise their profits. Is it right
8 to squeeze policyholders in order to pay their CEO
9 \$11 million?

10 It's probably the case after what I've
11 heard here today that the insurance companies are ---
12 too big a portion of that premium is going to the
13 shareholder part and not to the reserve account. The
14 increasing cost of skilled nursing care is not a valid
15 argument for increasing premiums because the
16 companies' liability for those benefits is capped,
17 both in the daily benefit and the length of time spent
18 in skilled nursing care. And irrespective of how much
19 the care actually costs. This is not an actuarial
20 assumption. This is a certainty at the time the
21 policy is written, what their liability would be.

22 And the actuarial estimate of how many
23 people would die before using their coverage is a weak
24 argument for raising premiums because life expectancy
25 tables are well founded as used in the pricing of life

1 insurance. It has been explained to me that the
2 Department reviews actuarial assumptions and allows
3 premium increases if there's not a good reason to
4 disallow them.

5 Well, there is a good reason to prohibit
6 increases. An insurance policy is a contract between
7 the company and the policyholder and it's
8 unconscionable for the more powerful party in the
9 contract to be permitted to unilaterally change the
10 terms. Policyholders are locked in. So far my wife
11 and I have paid over \$37,000 in premiums. If we lose
12 that investment because we can't afford our premium
13 anymore, it's like a bad investment. If the
14 Department would allow further rate increases, there
15 might be the possibility that it could done
16 conditionally such that the policyholders who have not
17 claimed any benefits have the option to cancel their
18 policy and receive a full refund of their premiums
19 paid. Thank you.

20 MS. FABIAN-MARKS:

21 Thank you for your comments. Now, Rae
22 Shan Lin, would you like to speak?

23 MS. LIN:

24 Thank you, the Commissioner, for the
25 opportunity to be here to speak. And I'm a consumer.

1 I have no link with any insurance company. I'm here
2 just speaking for myself and my own policy. I
3 subscribed to a long-term care insurance when I was in
4 my 50s. And now I'm in my 60s. And I still expect to
5 pay, hopefully, with God's blessing, for many, many
6 more years to come.

7 Saying that, I was urged by my colleague
8 who had a mother that had a fall and went to the
9 hospital. After the hospitalization, her mother was
10 deteriorated substantially that she was urged to go
11 find a nursing home placement for her mother. And
12 when she was looking for a nursing home, she said her
13 mother actually had a very good pension and whatever
14 --- her pension income plus Social Security income
15 should have been able to pay for the nursing home
16 care. However, none of the nursing homes that she had
17 looked at that were appropriate for her mother would
18 take her mother on unless her mother could put down a
19 three-year cost, nursing home cost, escort money. And
20 the reason for that, that's my speculation, at that
21 time since I was --- first in my early career I was
22 working in a nursing home. Then later on I became a
23 nursing home --- quote, unquote, nursing home
24 inspector. I was in Department of Health, health
25 facility examiner. So I know about the cost of

1 nursing homes, and I have some idea of the costs and
2 the care.

3 And she said my mother could have
4 afforded a good nursing home, but none of them will
5 take me because my mother just does not have any of
6 those cash reserves to put in the escort. And the
7 reason for that escort was at that time the average
8 nursing home stay from the time the elderly entered
9 the nursing home until the time the elderly deceased
10 --- the average at that time was two and a half years.
11 So to prevent their nursing home resident from cover
12 by Medicaid and receive the lower Medicaid
13 reimbursement, that was what a reputable home, a well-
14 run home, had to do to make sure there's enough escort
15 money to make sure all their residents are in private
16 payment. And therefore, my friend told me, look, if
17 you don't have a long-term care insurance, you go get
18 it now because if you have long-term care insurance,
19 you would not have run into the problem my mother is
20 having.

21 So I want to share this with all of you
22 for your consideration. Now just this year in
23 January, I got my 40-percent premium rate increase.
24 Before when I was working, I could afford those
25 increase because I was having an income. But now I'm

1 retired. I'm having a fixed income. With this
2 magnitude of the increase, my Social Security income
3 plus my pension will not be able to keep up with the
4 rate of this premium increase. So therefore, with
5 this kind of rate increase, it's going to force me
6 eventually to drop this long-term care insurance
7 because now the insurance company has reached --- I
8 heard the presentation earlier, mortality, morbidity
9 and lapse rate will determine their premium. The
10 insurance company has no control over mortality rate,
11 has no control over morbidity rate. So the only thing
12 they can control is lapse rate. So substantial
13 increase of the premium is going to make the retired
14 people unwillingly drop out of this insurance market.
15 And that's unconscionable, and that's really a
16 fraudulent practice. And thank you very much.

17 MS. FABIAN-MARKS:

18 Thank you for your comments. Now, Ray
19 Landis, would you like to speak?

20 MR. LANDIS:

21 Thank you. And thank you for the
22 opportunity. My name is Ray Landis. I am the
23 advocacy manager for AARP in Pennsylvania and I
24 represent our 1.8 million members in the state. I'd
25 like to thank the consumers who have just testified

1 and praise their courage for coming up and discussing
2 their individual situations. And what they have just
3 described is what we hear from members every day.
4 Every week, I think I hear from an AARP member who has
5 a complaint about the increasing premium of their
6 long-term care insurance policy. And this is not a
7 new situation. This is something that has been going
8 on as one gentleman mentioned since 2006, 2005, 2004.

9 We have been hearing from consumers who
10 did the right thing. And I can't emphasize more, that
11 these are consumers who took responsibility for their
12 future long-term care costs by buying insurance
13 policies in their 40s, in their 50s, when these
14 insurance policies were affordable. Now 20, 30 years
15 later, they are in situations as you just heard
16 described, where the individuals are on fixed incomes.
17 They are no longer earning their salaries. We saw a
18 zero percent increase in Social Security cost of
19 living increase last year. Yet these insurance
20 products are requesting significant increases.

21 And I guess I should say at the outset,
22 AARP urges the Commission to reject these premium
23 increases in their entirety. Consumers cannot afford
24 these increases in today's economy.

25 I would like to associate myself with

1 the comments from the gentleman who mentioned the
2 situation that these larger companies are in
3 financially. They have chosen to isolate these long-
4 term care insurance products in small pools where the
5 products are showing great losses. But that does not
6 take into account the larger net earnings of the
7 corporation. And it seems to me that consumers should
8 not bear the entire risk of the actuarial difficulties
9 and problems that have been encountered by long-term
10 care insurance. The companies should and their
11 shareholders should bear an equal amount of the risks
12 of the mistakes that were made in accounting for these
13 policies and the current costs of these policies.

14 And Commissioner, I'm so pleased to hear
15 that you are serving on a national task force to look
16 at how long-term care insurance fits into the overall
17 picture of long-term care. We have such a dilemma
18 with long-term care as it is right now and how we will
19 pay for it as a society.

20 I fear, however, that by approving these
21 kinds of premium increases, it will drive more people
22 out of the market that are in it right now, and it
23 will discourage more and more people from buying
24 policies that could address the rising costs and the
25 rising costs in society of long-term care services and

1 support. And if we see fewer people in the
2 marketplace because of the costs, that is going to
3 come back on all taxpayers with increasing utilization
4 of Medicaid, something none of us that are involved in
5 long-term care want to see. So I think that in
6 conclusion I'd like to say that individuals who are
7 now in their 70s and 80s on fixed incomes cannot
8 afford these premium increases. And we've got to
9 balance the risks to these individuals because we
10 don't want them to drop their policies that they have
11 paid into for years and years.

12 You know, we heard talk about the value
13 in long-term care insurance and how companies feel
14 that consumers still feel there is a value in it. I
15 would argue that these consumers see a value in the
16 investment that they have made over the past 20 and 30
17 years. And that they are not --- even though they are
18 scraping to afford the premiums they are not willing
19 to give up the investment that they have made for
20 many, many years because they did the right thing.
21 Thank you.

22 MS. FABIAN-MARKS:

23 Thank you. Next, I'm not sure if I'm
24 going to get this right, but Russ McDaid?

25 MR. MCDAID:

1 McDaid (corrects pronunciation).

2 MS. FABIAN-MARKS:

3 Oh. Sorry. Yes.

4 MR. MCDAID:

5 No. Not a problem. Good morning and
6 thank you, Commissioner Miller and your senior
7 executive team. My name is Russ McDaid. I am the
8 president and chief executive officer of the
9 Pennsylvania Healthcare Association. We're a
10 statewide association representing both for profit and
11 not for profit senior care and service providers from
12 retirement communities, nursing facilities, assisted
13 living providers. Many of the stories we've heard
14 here today from both sides, quote, unquote, from the
15 consumers and insurers, speak to the challenges that
16 our members see each and every day.

17 And I wanted to share some of those with
18 you here this morning and some recommendations that we
19 have. I have written testimony which I will leave you
20 with in the spirit of your two-minute rule. Also, I
21 learned I'm a lefty so I might have less than two
22 minutes in front of you. So I'm going to have keep
23 this very brief before I need to tap into my own long-
24 term care insurance policy.

25 You know, when you read through the

1 written testimony, you know, we talk about the
2 challenges of the state and the federal financing, you
3 know, the financing mechanisms we're facing right now
4 with our boomers, with the significant number of
5 people living longer and tapping into insurance. All
6 the dynamics that we've heard here this morning. And
7 as the president and CEO of a statewide long-term care
8 association, I'm often asked should everyone have
9 long-term care insurance or should I buy it?

10 And I tell them there's no way to
11 answer. It depends on how much money you have.
12 Financial advisors will tell you that if you're very
13 low income, it might not make sense. You'll go onto
14 Medicaid very quickly. If you're wealthy enough to
15 afford your long-term care costs, it might not be a
16 good investment for you. However, I think as we've
17 heard here today most of us fall into that middle
18 ground where it probably does make some sense.

19 And it's critical that we have viable
20 long-term care products in the marketplace.
21 Thirty-five (35) percent of individuals believe
22 they'll need long-term care in their lifetimes, age 65
23 and older. The real number is actually 70 percent of
24 people 65 and older will need some type of long-term
25 care over their lifetime. Of those, 15 percent are,

1 based on projections, guaranteed to spend some time in
2 a nursing facility of up to one year. That might not
3 be an extended one-year stay, it's cumulative. But
4 the point is, as we live longer, while we're staying
5 healthier longer, as there are more 90-year-olds, 95-
6 year-olds and 100-year-olds among us, it's important
7 that we have the ability to pay for that care and
8 services. The state Medicaid program and the federal
9 Medicare program simply can't sustain the burden that
10 our aging population is placing on us.

11 I have several recommendations in my
12 testimony which you have in writing. I want to go
13 over a few of them as I close. The first would be,
14 and you've heard it from several individuals here,
15 some type of tax credit whether it's above the line or
16 not for the purchase of private long-term care
17 insurance. We feel very strongly --- we've seen the
18 impact and our state policymakers who are here with us
19 today know the impact of asking the Medicaid program
20 at the state level and the Medicare program at the
21 federal level to be all things to all people. It
22 simply can't bear that burden. We have to have a
23 robust individual marketplace. And it's kind of a
24 Catch-22. The marketplace has to come to all of you
25 for the type of rate increases they're asking for

1 because it's not as robust as it might be, but it will
2 never be as robust as it needs to be until we make it
3 more affordable and fix some of those fundamental
4 flaws in the insurance market. We think the tax
5 credit is a piece that could do that.

6 Alternatively, Pennsylvania could pass
7 legislation that would allow individuals to access
8 their life insurance if they have a residual value in
9 some type of a whole life policy to pay for their
10 long-term care. Some type of an accelerated death
11 benefit. A similar concept would to be look at
12 passing legislation that would allow people to engage
13 more easily in reverse mortgages and manage that and
14 tap the equity in their homes. And, you know,
15 finally, as I would like to raise --- I mean, many
16 here have noted that there are a lot of challenges and
17 there's got to be some type of personal accountability
18 and some type of private side solution to this.

19 I was pleased to hear that you,
20 Commissioner, are on a NAIC commission looking at
21 innovative ways because we believe that we need to do
22 that. It's going to take a combination of things, a
23 robust private insurance market, people tapping into
24 their own individual equity with some type of
25 Government backstop on a subsidized catastrophic type

1 of benefit and the political will to hold consumers
2 accountable for accessing their own equity.

3 Theoretically, the Medicaid program
4 is that Government catastrophic backstop except all
5 too often it's not a catastrophic backstop at all,
6 it's the payer first resort based on the cottage
7 industry that people use to protect assets instead of
8 engaging in personal responsibility and those type of
9 things. So we applaud you for your work. It's been
10 my pleasure to be here sharing these issues with you
11 today. PHA appreciates your commitment to this issue.
12 As you go through your NAIC work, if you ever the
13 input providers themselves, we'd more than happy to
14 step into the room with you all and give you our
15 thoughts and the challenges that we see on a daily
16 basis. And I look forward to working with all of you
17 for solutions. Thank you.

18 MS. FABIAN-MARKS:

19 Thank you. The last person on our list
20 is Lance Haver so you can come up. And then after
21 that if there's anyone else in the audience who would
22 like to speak I'll check in and ask if there's anyone
23 else who wants to come up before we close.

24 MR. HAVER:

25 Using the standards that you've outlined

1 today none of the companies deserve a rate increase.
2 None. Let me be very clear. I had a very difficult
3 personal situation ten years ago. My economic
4 situation wasn't as good as I projected. My
5 healthcare costs were much higher than what I
6 projected. And I petitioned the Insurance
7 Commissioner five years ago to lower my car and
8 homeowners' insurance by 59 percent because I made bad
9 projections. The Insurance Commissioner said, no, I'm
10 not entitled. It's my mistake, as this gentleman just
11 said. I have a personal responsibility. I accept
12 that. But then I expect you to hold these insurance
13 companies to the same standard.

14 They made the bad projections. They
15 made the bad promises. They were the ones who told us
16 how important these policies were for us and that we
17 should keep them. And they said that again today, and
18 then they say because we listened to them they have to
19 raise our rates. It is unfair. The set criteria you
20 use is, are these companies financially solid? So I
21 have brought you evidence because it doesn't appear
22 that you've done your own due diligence or you would
23 have asked them these questions when you had the
24 chance.

25 Met Life. Met Life announces first

1 quarter 2016 preferred stock dividend action. They
2 are paying a dividend of over 25 cents a share for a
3 single quarter. That is not a company that is in
4 financial stress. John Hancock, which didn't announce
5 that it's now owned by Manual Life. John Hancock is
6 not stressed. Manual Life, the owner of John Hancock,
7 reports third quarter 15-percent core earnings of
8 \$870 million and claims it has a strong top line
9 growth and continued to have positive net flows in its
10 wealth and asset management business. It, again, is
11 not stressed. Unum, Unum in its press release, writes
12 reported net income of \$226.1 million, 93 cents a
13 share for the fourth quarter of 2015 alone. It is not
14 stressed. All of their claims that they are stressed
15 are outright fabrications with the exception of
16 Genworth, which I'll get to in a second.

17 All of these companies have purposefully
18 used long-term care as a loss leader item to get
19 people to buy other products from them. And then when
20 they have an opportunity to say they need a rate
21 increase they separate it. Genworth, on the other
22 hand, has had a dismal economic record in the last two
23 years. But I notice you didn't ask them what they
24 have done to keep their costs down. So I ask, what's
25 the top CEO who was here today, what's he paid a year?

1 MS. FABIAN-MARKS:

2 That's not information I have.

3 MR. HAVER:

4 Why don't you have that?

5 MS. FABIAN-MARKS:

6 We evaluate rating increases as I
7 described by looking at that loss ratio which is the
8 premium to benefit. That's our regulatory authority
9 to evaluate.

10 MR. HAVER:

11 I want to express to you, you said that
12 you also considered consumers' needs. Is there a
13 consumer ratio? Is there a ratio that's too much for
14 me to pay that you decide you can't raise rates
15 because the amount that I have to pay for insurance is
16 too high a ratio? Or is the ratio only there to
17 protect the insurance companies?

18 MS. FABIAN-MARKS:

19 We certainly do consider consumers. We
20 often approve rates that are below what the companies
21 have asked for.

22 MR. HAVER:

23 What is the ratio for a consumer?

24 MS. FABIAN-MARKS:

25 We only have authority to consider the

1 ratio in law.

2 MR. HAVER:

3 What's the projected ratio for a
4 consumer?

5 MS. FABIAN-MARKS:

6 Again, we have to refer to our
7 regulatory authority and I ---.

8 MR. HAVER:

9 And by the way, was there a reason why
10 so many of the insurance industry were calling you by
11 your first names? Are we to infer that you have
12 private conversations with them?

13 MS. FABIAN-MARKS:

14 We discuss their solvency and their rate
15 increases with them, yes.

16 MR. HAVER:

17 So you have private conversations that
18 the public is not allowed to know what's being
19 discussed?

20 MS. FABIAN-MARKS:

21 No. We want to conduct our business in
22 a transparent manner. That's why we're having this
23 hearing. That's why we make the filings public.

24 MR. HAVER:

25 So again, I asked earlier and I was told

1 I would have time. These letters that you send to
2 each one of the insurance companies, can I get a copy
3 of those letters?

4 MS. FABIAN-MARKS:

5 That's ---.

6 MR. LAVERTY:

7 You can access them via surf after the
8 filing is approved.

9 MR. HAVER:

10 That doesn't help me. I want to know
11 before a decision is made so I can have my opinion
12 listened to. You're obviously listening to their
13 opinion. Why doesn't my opinion count as much as
14 theirs?

15 COMMISSIONER:

16 That's why we're here.

17 MR. HAVER:

18 But you have private conversations with
19 them. They have private answers to you that I can't
20 see. So how could I possibly comment on those?

21 MS. FABIAN-MARKS:

22 The initial filings do contain the bulk
23 of the information, and we do make those public. We
24 can discuss other opportunities or ways that we could
25 make our correspondence more transparent.

1 MR. HAVER:

2 I want it to be part of the record that
3 I am asking now for every single letter that you have
4 sent in these rate requests and every single answer
5 that they have given.

6 MS. FABIAN-MARKS:

7 Thank you. We note that request.

8 MR. HAVER:

9 I'd like to now cross examine the
10 witness for Genworth, please.

11 MS. FABIAN-MARKS:

12 I am sorry. That is not how this
13 hearing is structured. This is simply an opportunity
14 for multiple parties to give their testimony. It's
15 not meant as a Q and A process.

16 MR. HAVER:

17 Under the Administrative Law and
18 Procedure, Section 505, evidence and cross
19 examination. Commonwealth agencies, which you are,
20 shall not be bound by technical rules of evidence at
21 agency hearings, which this is. And all relative
22 evidence of reasonably probative value may be
23 received. Reasonable examination and cross
24 examination shall be permitted.

25 MS. FABIAN-MARKS:

1 I believe Sandy, our health insurance
2 counsel, will answer.

3 ATTORNEY YKEMA:

4 Well, then allow me to comment on that.
5 My name is Sandy Ykema. I am the counsel for the
6 Department. This hearing is not a hearing subject to
7 the Administrative Code. It is rather a public
8 comment period subject to Title 40, PS 3801.310. This
9 is not an opportunity for cross examination.

10 MR. HAVER:

11 So when the Department sends me an email
12 saying it's going to be a hearing, is that incorrect
13 information? Is the Department misleading me?

14 ATTORNEY YKEMA:

15 Sir, it is an informational hearing. It
16 is not an administrative hearing subject to the
17 general rules for administrative proceedings.

18 MR. HAVER:

19 I sat through the slideshow
20 presentation, the PowerPoint. It didn't say that.
21 Again, was I being purposefully misled that this was a
22 public hearing?

23 ATTORNEY YKEMA:

24 A public hearing does not mean that is
25 subject to the administrative rules.

1 MR. HAVER:

2 What does it mean?

3 ATTORNEY YKEMA:

4 We appreciate your comments.

5 MR. HAVER:

6 You may appreciate my comments, but I'm
7 not finished. What does it mean?

8 ATTORNEY YKEMA:

9 Sir, it is a public comment period under
10 40 PS 3081.310. Thank you.

11 SECURITY:

12 Let's go. Come on, sir.

13 MR. HAVER:

14 I'm not done.

15 SECURITY:

16 Let's go.

17 MR. HAVER:

18 I'm not done.

19 SECURITY:

20 Your turn is done. Your turn's done.

21 MR. HAVER:

22 Who said my time is done?

23 SECURITY:

24 Sir. Let's go.

25 MR. HAVER:

1 I'm not done.

2 SECURITY:

3 Let's go. She told you you're done.

4 Let's go.

5 MR. HAVER:

6 She's not in charge of the hearing.

7 SECURITY:

8 Sir, leave or I'm going to have to
9 remove you.

10 MR. HAVER:

11 Why am I being removed?

12 SECURITY:

13 Sir. It's time to go.

14 MR. HAVER:

15 I have questions.

16 SECURITY:

17 Your time is up. It's time to go.

18 MR. HAVER:

19 Why can't I ask questions?

20 MR. BUONO:

21 Mr. Haver, you may stay with us. The
22 one thing that I do request is that we have all been
23 participating in this hearing in a way that we can
24 communicate with everybody. What we're hoping for is
25 that you could respect the individuals that have taken

1 the time to be here. And we will be happy to continue
2 to consider the information that you provided. Is
3 that fair?

4 MR. HAVER:

5 It's fair. Are there any consumers here
6 who are opposing what I'm saying? Not people who work
7 for the industry. Are there any consumers who want me
8 to stop? Because I will.

9 Hearing none, I want to second the
10 request that whenever a rate increase is asked for
11 that the insurance companies do exactly what every
12 utility company does, which is put a bill stuffer in
13 and tell people that these hearings are happening.
14 Notifying people after the fact is horrendous public
15 behavior. How can anybody participate if they don't
16 know the hearing is taking place?

17 And if you believe that people read the
18 Pennsylvania Bulletin you don't belong in a public
19 role. People do not read the Pennsylvania Bulletin.
20 Regular people do not get it every week. Every
21 insurance company should do what the phone company
22 does, what the electric company does, what the water
23 departments do. Send the notice in the bill. We're
24 asking for a rate increase. If you want to be heard,
25 come to the hearing.

1 I've brought with me comments from
2 people from Philadelphia who were unable to attend.
3 I'm just going to read the top one.

4 Dear State Insurance Commissioner, I
5 urge you to block the proposed rate increase for long-
6 term care insurance policies. I am a 73-year-old,
7 widowed and living in a one bedroom apartment in
8 Center City, Philadelphia. I purchased a long-term
9 healthcare policy with John Hancock in 2003. The
10 monthly fees are already high. The costs of care here
11 in Philadelphia are also expensive, but my sole safety
12 net. If monthly costs for my policy increases, I fear
13 not being able to pay the given cost. What then for
14 hundreds of thousands in the same predicament? The
15 fear of this is unbearable and the shock, affecting me
16 physically and emotionally, my wellbeing. The cost to
17 individuals in my category is unacceptable and
18 inconvenient. I urge you not to permit, to block and
19 rebuff this effort.

20 I've given you a list. Part of the
21 difficulties with the long-term care product is it
22 often offers a payment at a time when people are
23 struggling cognitively. The Friends Life Care model
24 is an HMO model, it's not being discussed. It should
25 be discussed.

1 You should be asking, again, Genworth
2 who claims that it has financial difficulties to
3 explain what it means when it says --- and I'm going
4 to again leave this as evidence --- when it says as
5 its strategy and priorities that it's going to
6 maximize our mortgage insurance opportunities and
7 restructure U.S. life insurance to rebuild shareholder
8 value. U.S. life insurance restructuring plan is to
9 separate and isolate long-term care business. Are
10 they getting ready, declaring solvency? Are you just
11 taking more money out of consumers' pockets so that
12 they can raise their price share, because that is, in
13 fact, what they say?

14 What Genworth says is the reason why
15 they need the rate increase is so that they can build
16 up their stockholder value, quote, we are seeking to
17 rebuild stockholder value through the following key
18 initiatives, cost and portfolio rationalizing. We are
19 embarking on a multi-step restructuring plan targeting
20 cash savings in excess of \$100 million, which means
21 they have a reserve already. In addition, we are
22 evaluating potential changes to our portfolio business
23 that will, we believe, improve our ability to reduce
24 debt levies, increase capital buffers and improve
25 earnings and return on equity.

1 If what you're looking is forcing
2 consumers who were tricked into buying these policies
3 at a much lower rate, and now are facing rate
4 increases because the company's experts made bad
5 decisions, you have to do one of three things. You
6 have to allow me to get a reduction in my homeowners'
7 and car insurance because I had bad projections. Two,
8 you have to deny the rate increase completely. Or
9 three, you have to give every ratepayer equity in the
10 company through a stock option. It is unconscionable
11 to tell these people, to tell me that I have to pay
12 more so that their stock price can go up. You are
13 forcing me to be an equity investor.

14 MS. FABIAN-MARKS:

15 I'm sorry to interrupt. We are over our
16 time so if you would be able to wrap up?

17 MR. HAVER:

18 I will wrap up, but I would point out
19 that you gave every one of the insurance companies ten
20 minutes and you've given consumers two minutes. I
21 don't know how less fair you could possibly be. Why
22 is it, again, what they want is so much more important
23 than what the public wants?

24 MS. FABIAN-MARKS:

25 I think in the end we did end up giving

1 up many consumers closer to ten minutes to comment.
2 And we certainly value the input.

3 MR. HAVER:

4 Then what you should do is force the
5 insurance companies to put up money so the consumers
6 can hire their own public advocate to participate in
7 these rate proceedings. If a utility asks for a rate
8 increase, there's a public advocate to represent
9 consumers. Telephone, landline telephone, which is
10 much less important than health insurance, car
11 insurance, homeowners' insurance or long-term care
12 insurance, has a full adversarial hearing.

13 Here you won't even let me ask what
14 their salaries are. You will not let me ask about
15 their overhead. You won't let me ask what have they
16 done to lower their overhead costs? Those are your
17 decisions, not the law. You are saying you will not
18 let me ask those questions.

19 The process is unfair because you have
20 made it unfair. People are suffering because you are
21 choosing to ignore their needs, and that is wrong.
22 Thank you.

23 MS. FABIAN-MARKS:

24 Thank you. We appreciate your comments
25 and the passion with which you are representing

1 consumers.

2 MR. HAVER:

3 I don't want your appreciation. What I
4 want you to do is change. I want you to do what is
5 right. I don't care what you think about me. What I
6 care is how are people treated. And what you
7 personally, not some amorphous government, what you're
8 personally doing is wrong. It's that simple. It's
9 wrong.

10 MS. FABIAN-MARKS:

11 Thank you. Is there anyone else who
12 would like to speak here in Harrisburg? Yes? Please
13 come up.

14 MR. BRIAN SHEPARD:

15 Good afternoon. My name is Brian
16 Shepard, and I have been affiliated in the long-term
17 care industry for 17 years as well. And I've been
18 employed by Genworth for a period of that time. When
19 I heard about the hearing, I was compelled to reflect
20 on some of the policyholders that I was privileged to
21 serve. And the first person that came to mind is Ms.
22 Foley. She wants me to call her Jean.

23 So Jean and Tom, I had the privilege to
24 meet with back in 2001. And we had great
25 conversation. Ultimately they decided that a long-

1 term care policy would be the roadmap, the playbook
2 for which they could help the impact of a long-term
3 care need on their family and finances. So I want
4 Jean to speak her mind as to what long-term care
5 insurance met to her. And that's why I brought her
6 here today.

7 MRS. FOLEY:

8 My husband's mother passed away with
9 Alzheimer's. When we discovered that we could get
10 long-time insurance, even though she had passed away,
11 we felt that it was a very good idea. My husband now
12 is starting dementia. Well, he's in the middle
13 stages. And we will probably have to use this policy
14 in the near future. However, I have Genworth, and I
15 have not had any policy increases until the last two
16 years. And I just feel that the payments are getting
17 to point where they're going to be too high.

18 He might be all right for five years or
19 seven years or ten years because it's just so slow.
20 But the percentage of Alzheimer's is growing so much
21 that people are not going to be able to afford the
22 insurance for people who know that that could be
23 possibly in their situation within the next 10, 15
24 years. And then these people are going to end up
25 going to Medicaid, and then the people who pay for the

1 Medicaid are people who pay taxes.

2 So it is just --- if you're going to
3 increase these payments, then people aren't going to
4 be able to afford it and then the state is going to
5 have to get money from the taxpayers to pay for the
6 Medicaid. With the increase of Alzheimer's, I just
7 think you need to find a way to decrease these
8 payments so that the other person who doesn't have
9 this situation has to pay all that money.

10 MS. FABIAN-MARKS:

11 Thank you.

12 MR. BRIAN SHEPARD:

13 I'll just leave you with reiterating
14 around tax credits. Certainly the State of
15 Pennsylvania is on the hook for the last payer, I.E.
16 Medicaid. And it's the single largest line item on
17 the budget. What about being a partner on the front
18 because the liability is on the insurance company and
19 the insureds? How about participating as a partner to
20 reduce and help subsidize these rate increases that
21 are imminent or existing now with some sort of a
22 significant tax credit such as New York or even better
23 where that can help reduce those rate increases as
24 well? Thank you.

25 MS. FABIAN-MARKS:

1 Thank you. Is there anyone else in the
2 audience who would like to speak?

3 Okay. With that, I think we've heard
4 from everyone who came to speak and we can wrap up.
5 Commissioner Miller? Oh.

6 MR. HAVER:

7 When is the record closing for today's
8 public hearing?

9 MS. FABIAN-MARKS:

10 I don't have the dates in front of me.
11 It's in April and May is when our 45-day review period
12 expires. It varies for each of the rate increases.
13 They came in at different times. But as I mentioned,
14 if necessary we can extend that period of review.

15 MR. HAVER:

16 Will there be a written decision for
17 each case?

18 MS. FABIAN-MARKS:

19 That's something that we're thinking
20 about starting to institute. We haven't done that in
21 the past, but we are thinking about doing that for
22 these in going forward.

23 MR. HAVER:

24 I'm sorry. Is that a no or yes?

25 MS. FABIAN-MARKS:

1 It's something we're considering.

2 MR. HAVER:

3 Then it's no.

4 MS. FABIAN-MARKS:

5 It does not mean no.

6 COMMISSIONER:

7 So I just want to thank everyone for
8 coming to this hearing. The Governor believes, as I
9 do, in transparency in government, which is why we had
10 this hearing. I don't think the state has had a
11 hearing on a long-term care insurance filing in the
12 past, that I am aware of at least. But it's really
13 important to us to hear from consumers.

14 We know the impact these increases have
15 on consumers and wanted to give consumers the
16 opportunity to really participate in this process
17 through this hearing. And we are working very hard to
18 try to make our processes more transparent, which is
19 again why we're here. We made lots of changes to our
20 health insurance rate review process last year, and I
21 think we'll continue to look for opportunities to
22 improve our long-term care insurance rate review
23 process as we're looking for opportunities, frankly,
24 to be more transparent about the way we operate
25 generally.

1 This has not historically been the way
 2 the Department has operated. So we're breaking new
 3 ground here. So we're not going to get there
 4 overnight, but we're certainly going to make any
 5 effort we can to keep this process as transparent as
 6 possible.

7 And again, I really appreciate everyone
 8 taking the time to be here. Thank you to the
 9 companies for making this work for your schedule and
 10 being here to talk about why you're coming in with
 11 some of these significant increases. And thank you
 12 very much to all the consumers who took the time to be
 13 here to share your thoughts about how these proposed
 14 increases will have an impact on you. So thank you
 15 very much.

16 * * * * *

17 HEARING CONCLUDED AT 12:12 P.M.

CERTIFICATE

I hereby certify that the foregoing proceedings,
hearing held before Commissioner Miller was reported
by me on 3/10/16 and that I, Seth R. Baier, read this
transcript, and that I attest that this transcript is
a true and accurate record of the proceeding.
